Abbreviations

Depth: Depth from free surface, at which CPT was performed (ft)
q_t: Total cone resistance
I_c: Soil behavior type index
Fr: Normalized friction ratio (%)
n: Stress exponent
Q_{tn}: Normalized cone resistance
K_c: Cone resistance correction factor due to fines
$Q_{tn,cs}$: Normalized and adjusted cone resistance
$CRR_{7.5}$: Cyclic resistance ratio for M_w=7.5
FS: Factor of safety against soil liquefaction

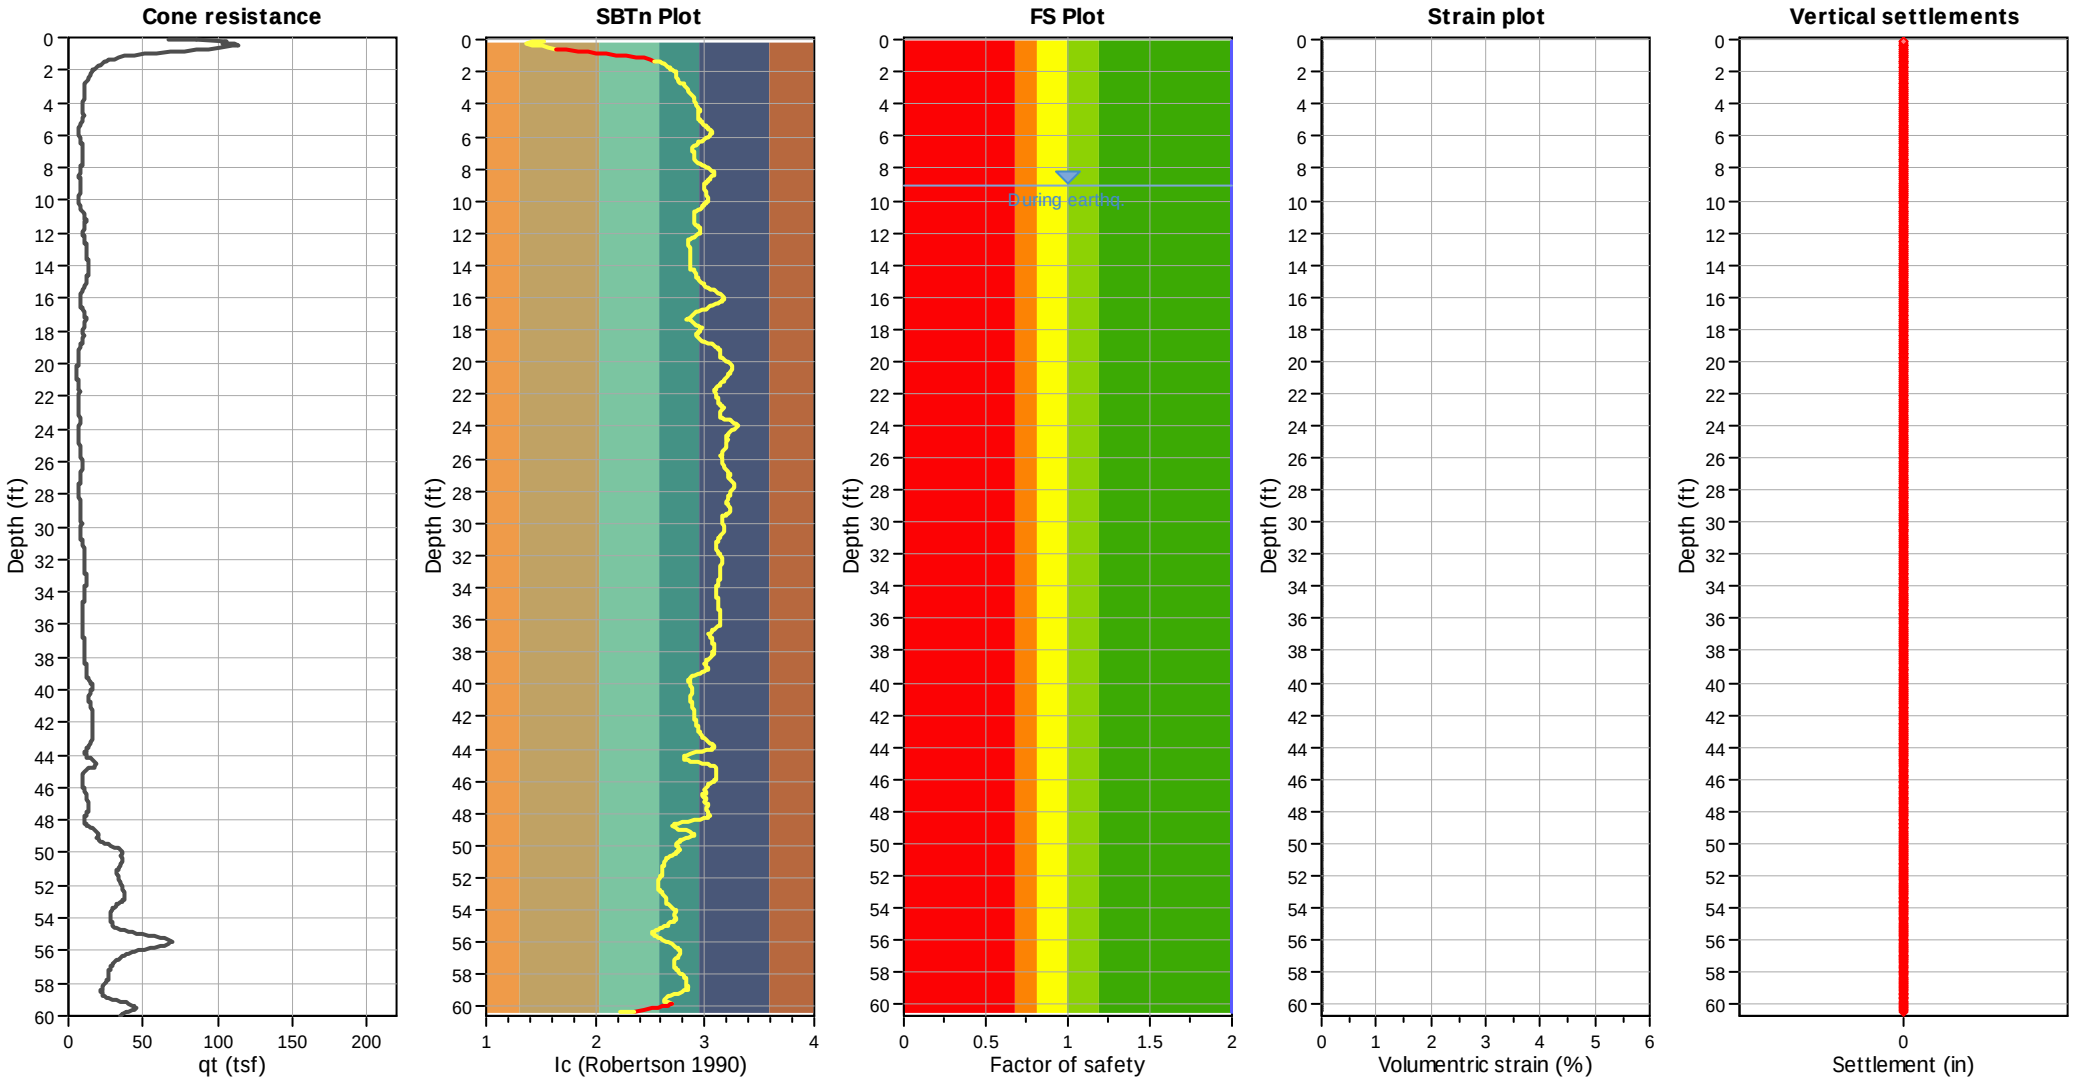
Overall liquefaction potential: 0.00

LPI = 0.00 - Liquefaction risk very low
LPI between 0.00 and 5.00 - Liquefaction risk low
LPI between 5.00 and 15.00 - Liquefaction risk high
LPI > 15.00 - Liquefaction risk very high

Abbreviations

FS: Calculated factor of safety for test point
F_L: 1 - FS
w_z: Function value of the extend of soil liquefaction according to depth
d_z: Layer thickness (ft)
LPI: Liquefaction potential index value for test point

Estimation of post-earthquake settlements



Abbreviations

q_t:	Total cone resistance (cone resistance q_c corrected for pore water effects)
I_c:	Soil Behaviour Type Index
FS:	Calculated Factor of Safety against liquefaction
Volumentric strain:	Post-liquefaction volumentric strain

:: Lateral displacement index calculation ::

Total estimated displacement: 0.00

Abbreviations

q_t: Total cone resistance
Q_{tn}: Adjusted cone resistance to an effective overburden stress of 1 atm
R_f: Friction ration
$Q_{tn,cs}$: Adjusted and corrected cone resistance due to fines
FS: Calculated factor of safety against liquefaction
D_r: Calculated relative density
$Gamma_{max}$: Calculated maximum cyclic shear strain
Lat. disp.: Lateral displacement

Abbreviations

q_t:	Total cone resistance
K_c:	Cone resistance correction factor due to fines
$Q_{tn,cs}$:	Adjusted and corrected cone resistance due to fines
I_c:	Soil behavior type index
$S_{u(liq)}/\sigma'_v$:	Calculated liquefied undrained strength ratio
$S_{u(peak)}/\sigma'_v$:	Calculated peak undrained strength ratio

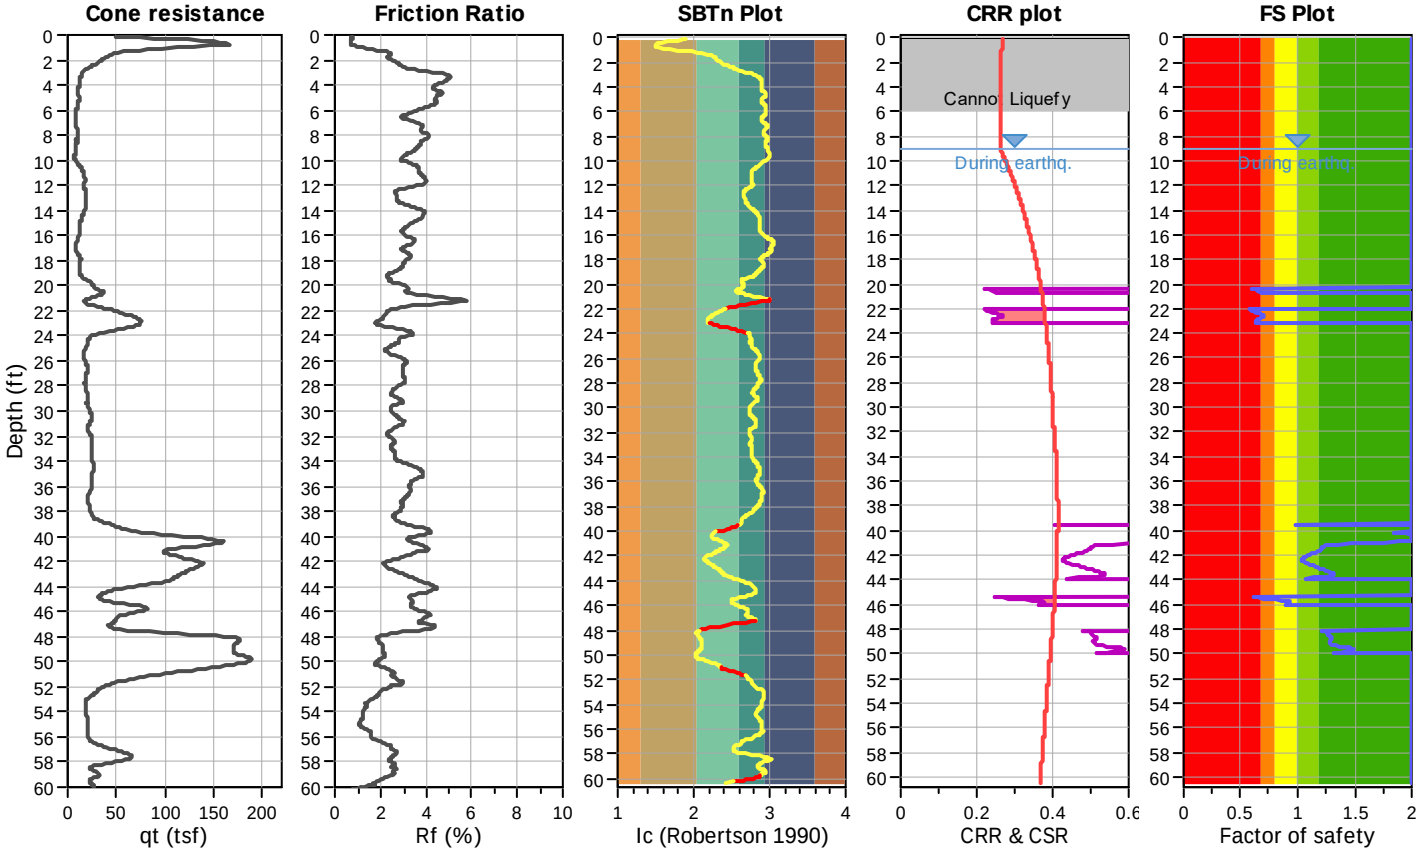
LIQUEFACTION ANALYSIS REPORT

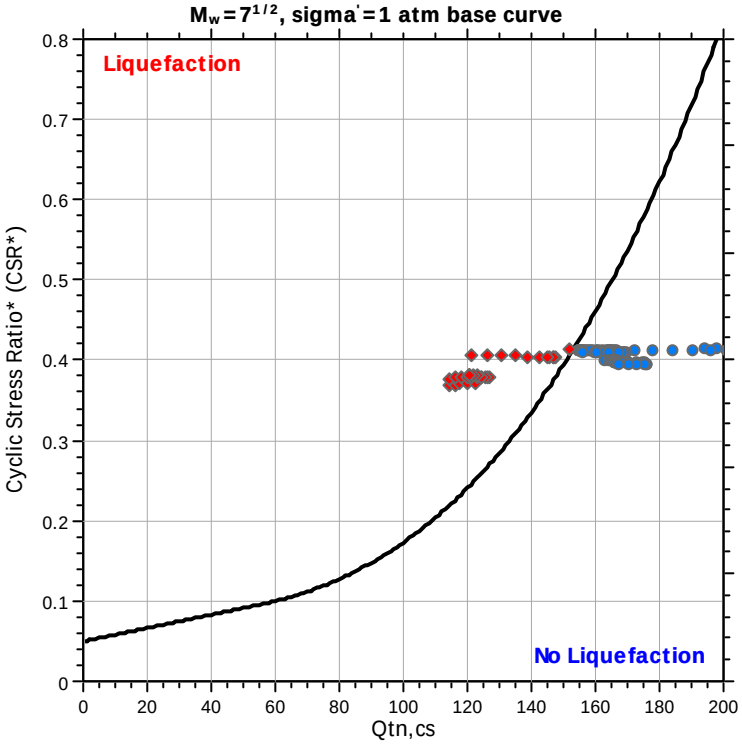
Project title : W1301-06-01 **Location : Perry Street**

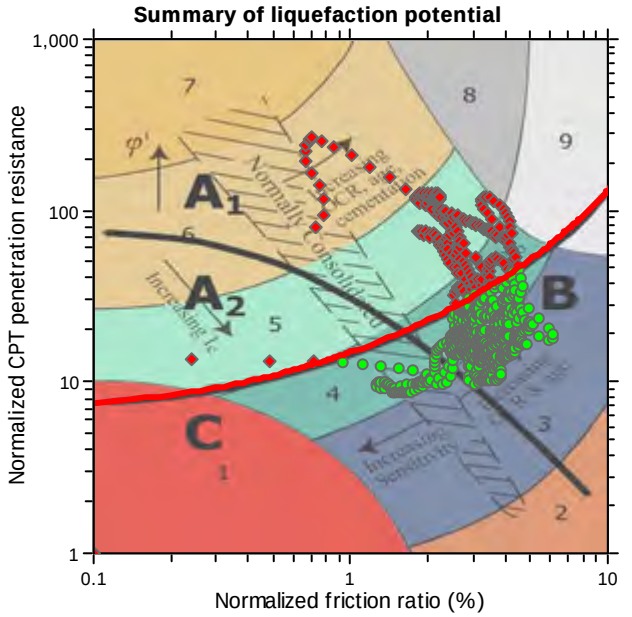
CPT file : CPT-5

Input parameters and analysis data

Analysis method:	NCEER (1998)	G.W.T. (in-situ):	12.00 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	NCEER (1998)	G.W.T. (earthq.):	9.00 ft	Fill height:	N/A	Limit depth applied:	Yes
Points to test:	Based on Ic value	Average results interval:	.	Fill weight:	N/A	Limit depth:	50.00 ft
Earthquake magnitude M_w:	6.68	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.55	Unit weight calculation:	Based on SBT	K_σ applied:	Yes		







Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

F.S. color scheme

- Almost certain it will liquefy
- Very likely to liquefy
- Liquefaction and no liq. are equally likely
- Unlike to liquefy
- Almost certain it will not liquefy

LPI color scheme

- Very high risk
- High risk
- Low risk

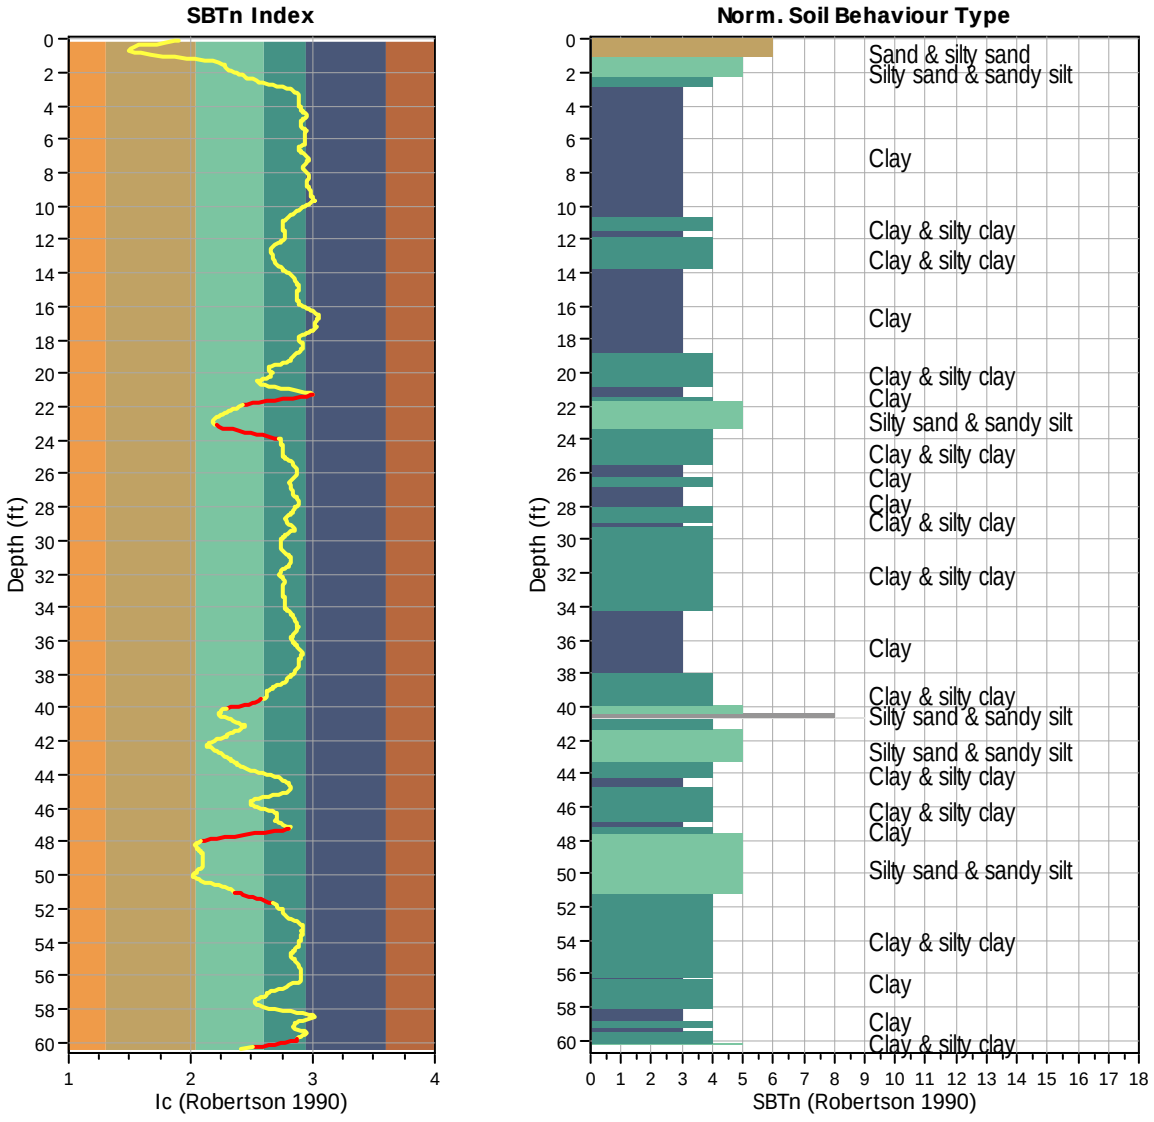
TRANSITION LAYER DETECTION ALGORITHM REPORT
Summary Details & Plots

Short description

The software will delete data when the cone is in transition from either clay to sand or vise-versa. To do this the software requires a range of I_c values over which the transition will be defined (typically somewhere between 1.80 < I_c < 3.0) and a rate of change of I_c. Transitions typically occur when the rate of change of I_c is fast (i.e. delta I_c is small).

The SBT_n plot below, displays in red the detected transition layers based on the parameters listed below the graphs.



Transition layer algorithm properties		General statistics	
I_c minimum check value:	1.70	Total points in CPT file:	922
I_c maximum check value:	3.00	Total points excluded:	67
I_c change ratio value:	0.0250	Exclusion percentage:	7.27%
Minimum number of points in layer:	4	Number of layers detected:	6

Transition layer No	Number of points	Depth	SBT_n number	SBT_n description
Transition layer 1	12	Start depth: 21.26 (ft)	3	Clay
		End depth: 22.01 (ft)	5	Silty sand & sandy silt
Transition layer 2	13	Start depth: 23.18 (ft)	5	Silty sand & sandy silt
		End depth: 23.96 (ft)	4	Clay & silty clay
Transition layer 3	9	Start depth: 39.60 (ft)	4	Clay & silty clay
		End depth: 40.11 (ft)	5	Silty sand & sandy silt
Transition layer 4	13	Start depth: 47.28 (ft)	3	Clay
		End depth: 48.04 (ft)	5	Silty sand & sandy silt
Transition layer 5	11	Start depth: 51.09 (ft)	5	Silty sand & sandy silt
		End depth: 51.73 (ft)	4	Clay & silty clay
Transition layer 6	9	Start depth: 59.87 (ft)	4	Clay & silty clay
		End depth: 60.40 (ft)	5	Silty sand & sandy silt

Start depth: Depth where the transition layer begins
End depth: Depth where the transition layer ends

Abbreviations

Depth: Depth from free surface, at which CPT was performed (ft)
σ_v: Total overburden pressure at test point (tsf)
u_0: Water pressure at test point (tsf)
σ_v': Effective overburden pressure based on GWT during earthquake (tsf)
r_d: Nonlinear shear mass factor
CSR: Cyclic Stress Ratio
MSF: Magnitude Scaling Factor
CSR_{eq}: CSR adjusted for M=7.5
K_σ: Effective overburden stress factor
CSR^*: CSR fully adjusted

Abbreviations

Depth: Depth from free surface, at which CPT was performed (ft)
q_t: Total cone resistance
I_c: Soil behavior type index
Fr: Normalized friction ratio (%)
n: Stress exponent
Q_{tn}: Normalized cone resistance
K_c: Cone resistance correction factor due to fines
$Q_{tn,cs}$: Normalized and adjusted cone resistance
$CRR_{7.5}$: Cyclic resistance ratio for M_w=7.5
FS: Factor of safety against soil liquefaction

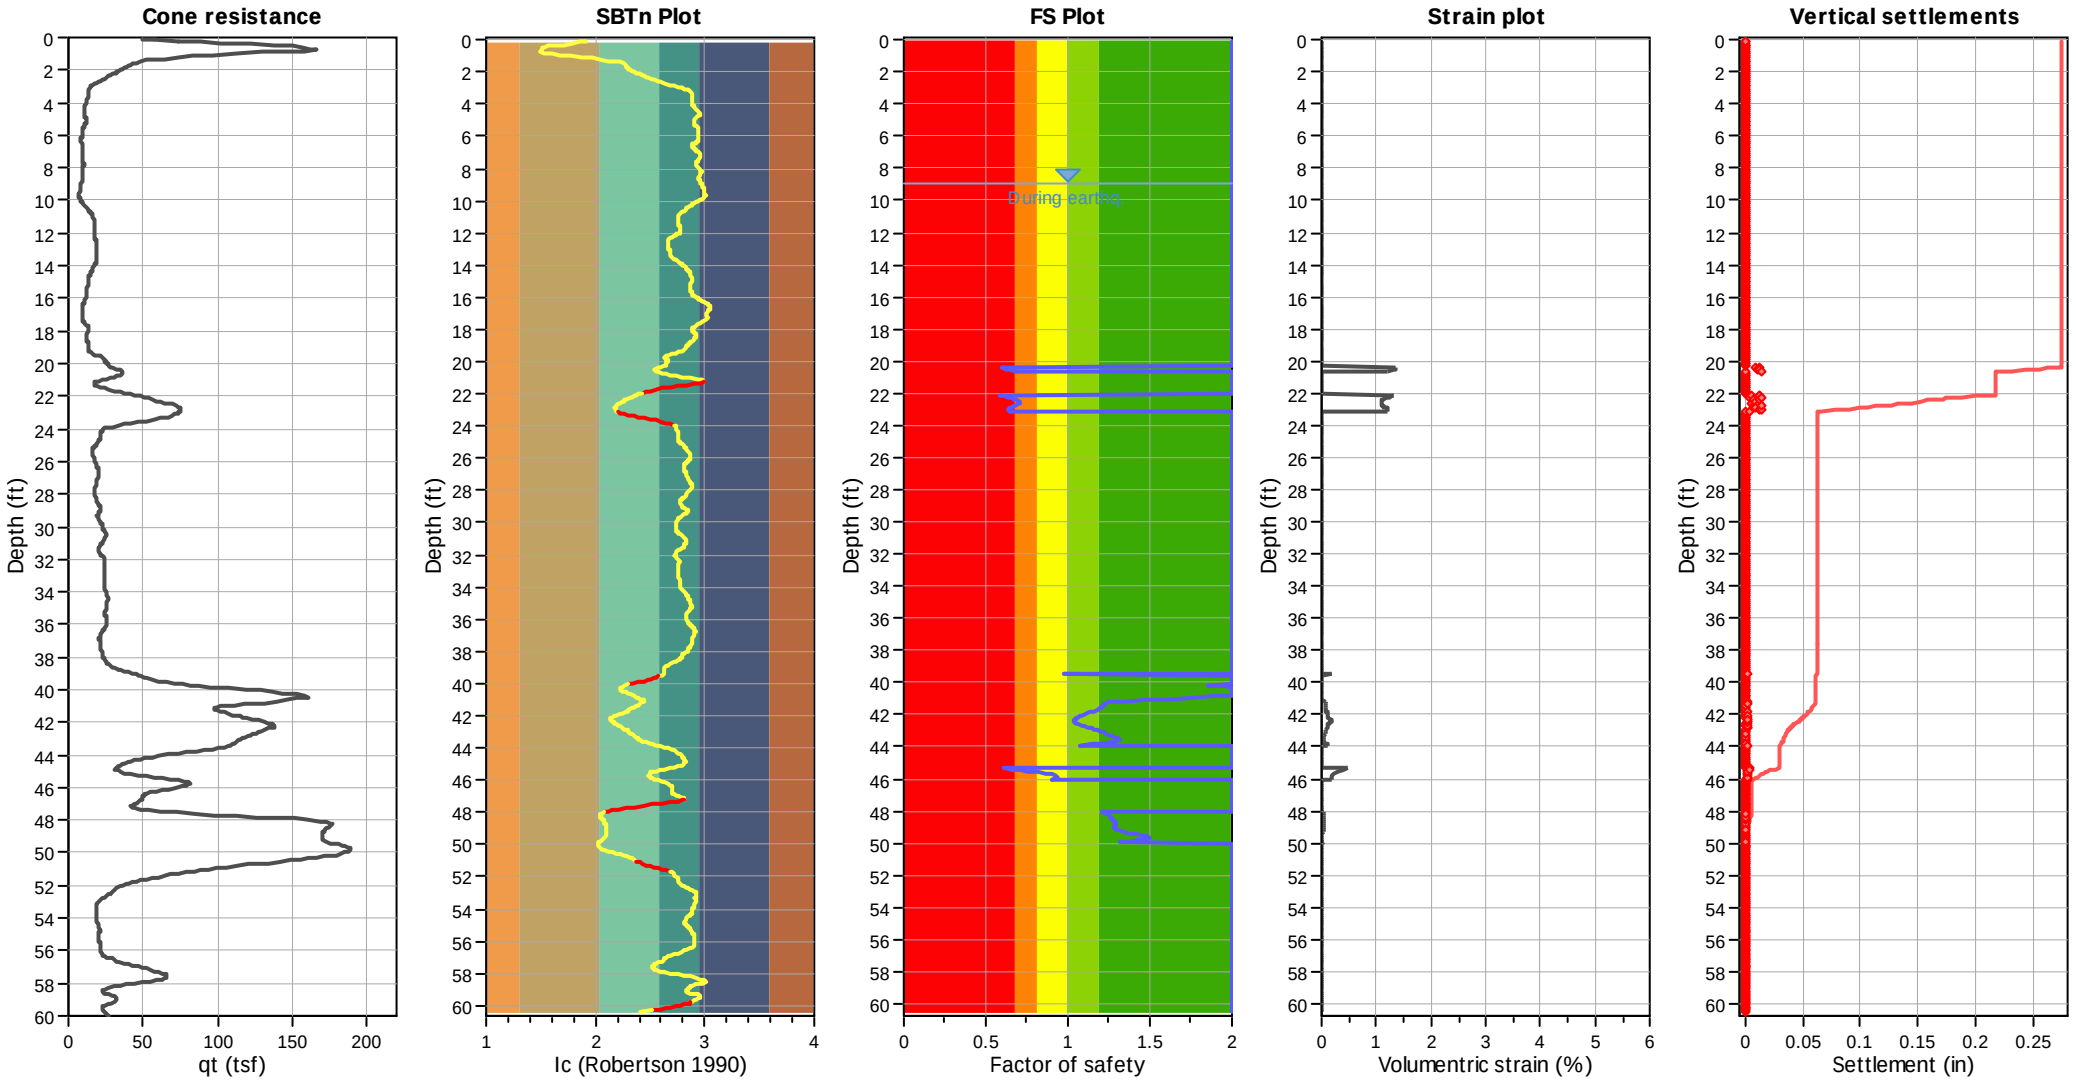
Overall liquefaction potential: 1.15

LPI = 0.00 - Liquefaction risk very low
LPI between 0.00 and 5.00 - Liquefaction risk low
LPI between 5.00 and 15.00 - Liquefaction risk high
LPI > 15.00 - Liquefaction risk very high

Abbreviations

FS: Calculated factor of safety for test point
F_L: 1 - FS
w_z: Function value of the extend of soil liquefaction according to depth
d_z: Layer thickness (ft)
LPI: Liquefaction potential index value for test point

Estimation of post-earthquake settlements



Abbreviations

q_t:	Total cone resistance (cone resistance q_c corrected for pore water effects)
I_c:	Soil Behaviour Type Index
FS:	Calculated Factor of Safety against liquefaction
Volumentric strain:	Post-liquefaction volumentric strain

:: Lateral displacement index calculation ::

Total estimated displacement: 6.76

Abbreviations

q_t: Total cone resistance
Q_{tn}: Adjusted cone resistance to an effective overburden stress of 1 atm
R_f: Friction ration
$Q_{tn,cs}$: Adjusted and corrected cone resistance due to fines
FS: Calculated factor of safety against liquefaction
D_r: Calculated relative density
$Gamma_{max}$: Calculated maximum cyclic shear strain
Lat. disp.: Lateral displacement

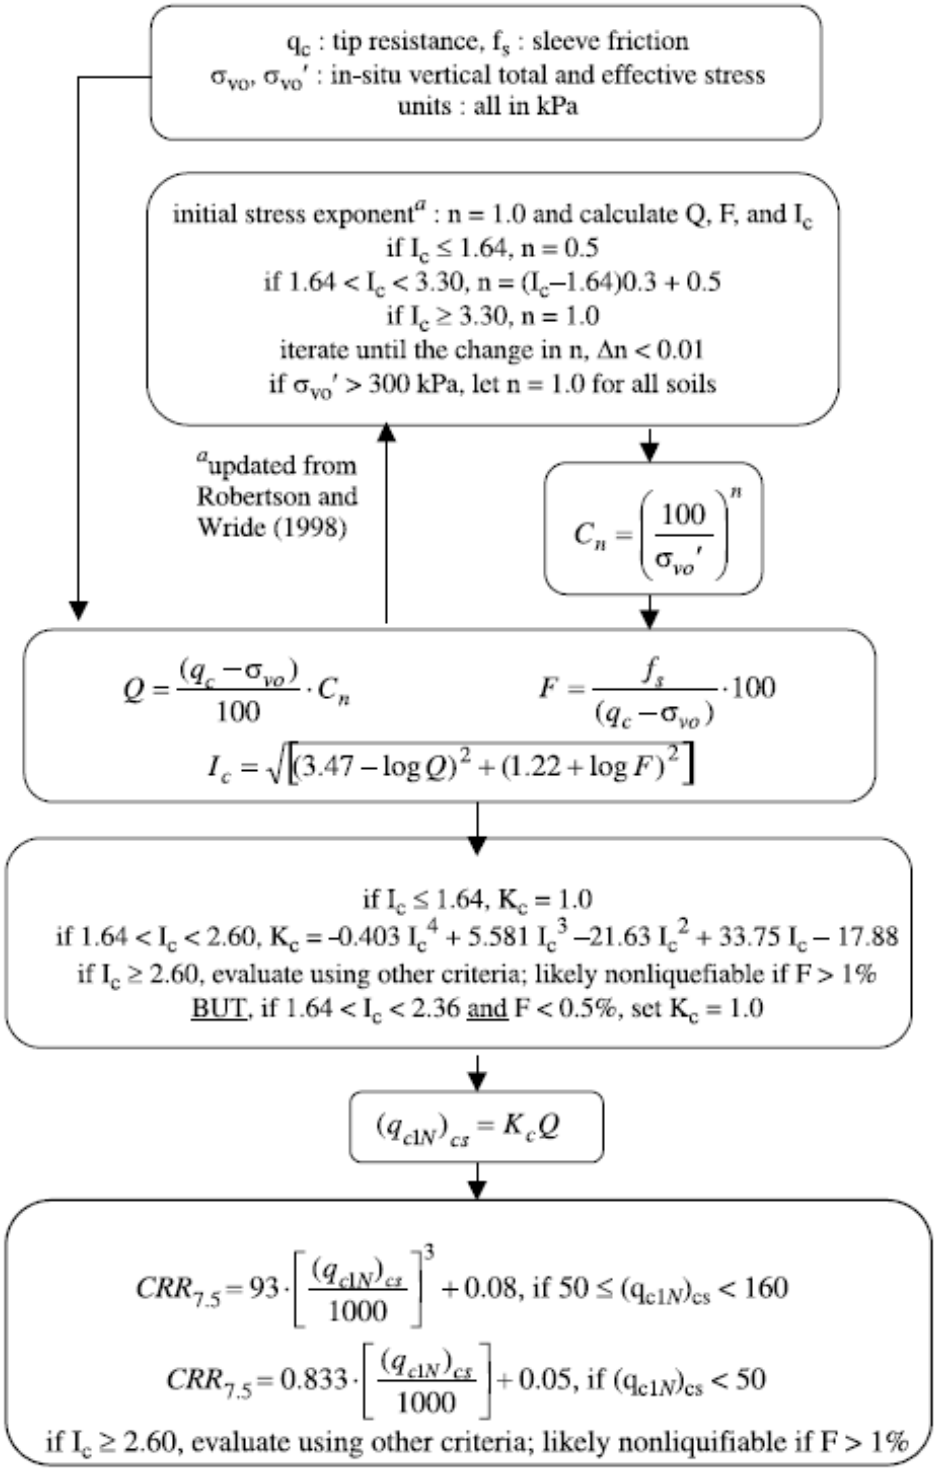
Abbreviations

q_t: Total cone resistance
K_c: Cone resistance correction factor due to fines
$Q_{tn,cs}$: Adjusted and corrected cone resistance due to fines
I_c: Soil behavior type index
$S_{u(liq)}/\sigma'_v$: Calculated liquefied undrained strength ratio
$S_{u(peak)}/\sigma'_v$: Calculated peak undrained strength ratio

Procedure for the evaluation of soil liquefaction resistance, NCEER (1998)

Calculation of soil resistance against liquefaction is performed according to the Robertson & Wride (1998) procedure. The procedure used in the software, slightly differs from the one originally published in NCEER-97-0022 (Proceedings of the NCEER Workshop on Evaluation of Liquefaction Resistance of Soils). The revised procedure is presented below in the form of a flowchart[1]:



[1] "Estimating liquefaction-induced ground settlements from CPT for level ground", G. Zhang, P.K. Robertson, and R.W.I. Brachman

Procedure for the evaluation of soil liquefaction resistance (all soils), Robertson (2010)

Calculation of soil resistance against liquefaction is performed according to the Robertson & Wride (1998) procedure. This procedure used in the software, slightly differs from the one originally published in NCEER-97-0022 (Proceedings of the NCEER Workshop on Evaluation of Liquefaction Resistance of Soils). The revised procedure is presented below in the form of a flowchart[1]:

Liquefaction Potential Index (LPI) calculation procedure

Calculation of the Liquefaction Potential Index (LPI) is used to interpret the liquefaction assessment calculations in terms of severity over depth. The calculation procedure is based on the methology developed by Iwasaki (1982) and is adopted by AFPS.

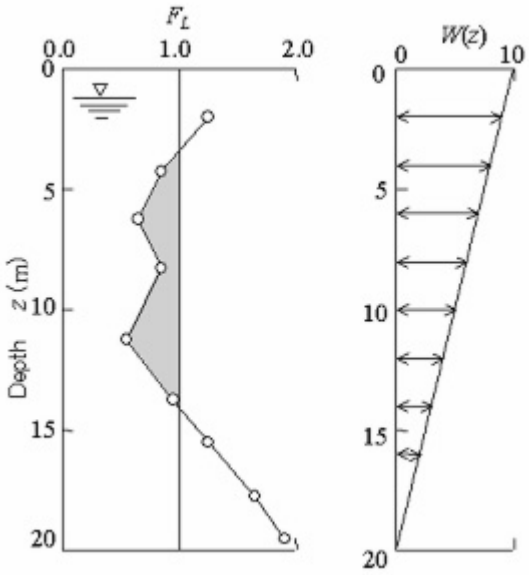
To estimate the severity of liquefaction extent at a given site, LPI is calculated based on the following equation:

$$\mathbf{LPI} = \int_0^{20} (10 - 0{,}5z) \times F_L \times dz$$

where:
F_L = 1 - F.S. when F.S. less than 1
F_L = 0 when F.S. greater than 1
z depth of measurment in meters

Values of LPI range between zero (0) when no test point is characterized as liquefiable and 100 when all points are characterized as susceptible to liquefaction. Iwasaki proposed four (4) discrete categories based on the numeric value of LPI:

- LPI = 0 : Liquefaction risk is very low
- 0 < LPI <= 5 : Liquefaction risk is low
- 5 < LPI <= 15 : Liquefaction risk is high
- LPI > 15 : Liquefaction risk is very high



Graphical presentation of the LPI calculation procedure

Shear-Induced Building Settlement (Ds) calculation procedure

The shear-induced building settlement (Ds) due to liquefaction below the building can be estimated using the relationship developed by Bray and Macedo (2017):

$$Ln(Ds) = c1 + c2 * LBS + 0.58 * Ln\left(Tanh\left(\frac{HL}{6}\right)\right) + 4.59 * Ln(Q) - 0.42 * Ln(Q)^2 - 0.02 * B + 0.84 * Ln(CAVdp) + 0.41 * Ln(Sa1) + \varepsilon$$

where Ds is in the units of mm, c1= -8.35 and c2= 0.072 for LBS ≤ 16, and c1= -7.48 and c2= 0.014 otherwise. Q is the building contact pressure in units of kPa, HL is the cumulative thickness of the liquefiable layers in the units of m, B is the building width in the units of m, CAVdp is a standardized version of the cumulative absolute velocity in the units of g-s, Sa1 is 5%-damped pseudo-acceleration response spectral value at a period of 1 s in the units of g, and ε is a normal random variable with zero mean and 0.50 standard deviation in Ln units. The liquefaction-induced building settlement index (LBS) is:

$$LBS = \sum W * \frac{\varepsilon_{shear}}{z} dz$$

where z (m) is the depth measured from the ground surface > 0, W is a foundation-weighting factor wherein W = 0.0 for z less than Df, which is the embedment depth of the foundation, and W = 1.0 otherwise. The shear strain parameter (ε_shear) is the liquefaction-induced free-field shear strain (in %) estimated using Zhang et al. (2004). It is calculated based on the estimated Dr of the liquefied soil layer and the calculated safety factor against liquefaction triggering (FSL).

Construction Energy

Construction Water Energy Estimates

Source	Acreage/Day	Number of Days	Total Construction Water Use (Mgal)	Electricity Demand from Water Conveyance (MWh)	Annual Electricity Demand from Water Conveyance (MWh)
Grading/Excavation	4.0	21	0.252	3.3	3.5
Total			**0.252**	**3.3**	**3.5**

CalEEMod Water Electricity Factors	Electricity Intensity Factor To Supply (kWh/Mgal)	Electricity Intensity Factor To Treat (kWh/Mgal)	Electricity Intensity Factor To Distribute (kWh/Mgal)	Electricity Intensity Factor For Wastewater Treatment (kWh/Mgal)
	9727	111	1272	1911

Construction Water GHG	Electricity Emission (MT CO2e/MWh)	Electricity Emission (lbs CO2e/MWh)
0.76	0.23	508.97

Sources and Assumptions:

CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Equipment Type	Acres/8hr-day
Crawler Tractors	0.5
Graders	0.5
Rubber Tired Dozers	0.5
Scrapers	1

Subject: Phase I Environmental Site Assessment
21611 S Perry Street
Carson, CA 90745-1613
Project Number 20-09-014

Dear Mr. Embry:

Weis Environmental, LLC has completed the contracted environmental consulting services for the above-referenced project. The services were performed in accordance with our proposal and agreement fully executed by all parties. The Phase I Environmental Site Assessment has been performed in accordance with ASTM International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E1527-13 and Title 40 of the Code of Federal Regulations (40 CFR) Part 312. We appreciate the opportunity to be of service to you on this project. Please contact us if you have any questions or comments regarding this report or if we can be of further assistance.

Sincerely,

Weis Environmental, LLC

Daniel Weis, R.E.H.S.
Environmental Manager

1.0 INTRODUCTION

This report presents the methods and findings of a Phase I ESA of the property located at 21611 S Perry Street in the City of Carson, County of Los Angeles, California (Site) performed in conformance with the contract/agreement for this assignment and the scope and limitations of ASTM Standard Practice E1527-13 and United States Environmental Protection Agency (EPA) Standards and Practices for All Appropriate Inquiries (AAI) as published in 40 Code of Federal Regulations (CFR) Part 312. EPA promulgated the AAI rule that became effective in November 2006 and has indicated that the ASTM E1527 practice is consistent with the requirements of AAI and may be used to comply with the provisions of the AAI rule.

1.1 Purpose

The purpose of the ASTM E1527 practice (framework for this Phase I ESA) is to define good commercial and customary practice in the United States of America for conducting an ESA of a parcel of real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (Title 42 United States Code (U.S.C.) Section 9601)) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. Section 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting this Phase I ESA of the Site, the goal of the processes established by the ASTM E1527 practice is to identify, to the extent feasible, recognized environmental conditions. The term recognized environmental conditions is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. In addition, controlled recognized environmental conditions, historical recognized environmental conditions and/or de minimis conditions, if identified during the completion of the assessment, are discussed herein. Definitions of these terms and other key terminology relevant to the practice are included in Section 14.0 of this report.

1.2 Scope of the Assessment

In general terms, this Phase I ESA included the acquisition of readily available/accessible and practically reviewable regulatory records and historical information, a site reconnaissance, interviews, and preparation of this written report of findings. A more detailed description of the four primary components of the Phase I ESA is presented below.

Records Review - A review of Federal, State, Tribal, and local standard ASTM and non-ASTM regulatory databases for a myriad of environmental identifiers including but not limited to properties with underground storage tanks (USTs), properties with leaking USTs, properties that have reported spills/releases that did not occur from a leaking UST, businesses that utilize hazardous materials and/or generate hazardous waste and hazardous waste disposal locations. The regulatory review may also include public records requests with one or more Federal, State, Tribal and/or local agencies. A review

of historical sources is also completed to help ascertain previous land uses of the property in question and in the surrounding area.

Site Reconnaissance - A property inspection and viewing of adjacent and surrounding properties for conditions that could be recognized environmental conditions.

Interviews - Interviews with present and past owners, operators and/or occupants of a property and local government officials.

Reporting - Evaluation of the information gathered during the completion of the Phase I ESA and the subsequent preparation of a written report.

1.3 Limitations and Exceptions

Concerns regarding liability under the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. 9601 et seq. (CERCLA) and analogous State laws, have been a primary driver for Phase I ESA assignments in commercial real estate transactions. While the ASTM E1527 practice can be used in many contexts, a familiarity with CERCLA and its potential LLPs is critical in understanding and applying the ASTM E1527 practice. We advise consultation with legal counsel if further inquiry or information is desired.

AAI represents the minimum level of inquiry necessary to support the LLPs. However, it is important to understand that additional inquiry ultimately may be necessary or desirable for legal as well as business reasons depending upon the outcome of this inquiry and the particular risk tolerances of a given user. For example, additional inquiry may assist a user of a Phase I ESA in determining whether he or she would have continuing obligations in the event he or she acquires a given property and may also assist the user in defining the scope of future steps to be taken to satisfy such obligations. In addition, a user may be concerned about business environmental risks or non-scope ASTM considerations that do not fall within the definition of a recognized environmental condition. In addition, this assessment did not include subsurface or other invasive exploration. Users are also cautioned that Federal, State, Tribal and local laws may impose environmental assessment obligations that are beyond the scope of the ASTM E1527 practice.

The evaluation, opinion and conclusions presented herein are based solely on visual observations and regulatory, historical, and personal knowledge related information that existed at the time our assessment was completed. The use of the gathered information is exclusively for the purposes outlined in this report and only for the Site. Our firm can make no warranty, either express or implied, except that the services conducted were performed in accordance with generally accepted environmental assessment practices applicable at the time and location of the assessment and that the conclusions of the assessment have been based in part on professional judgment/experience, an interpretation of readily available data and the standard of care normally followed by similar professionals practicing in a similar locale and under similar circumstances. Any opinions presented cannot apply to Site changes of which our firm is unaware and has not had the opportunity to evaluate. In addition, this report cannot feasibly include any evaluation of undocumented activities at the Site or on adjacent or nearby properties. Lastly, a Phase I ESA meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition of a given property or (for transactions not involving an acquisition) the date of the intended transaction is presumed to be valid.

1.4 Special Terms and Conditions

This Phase I ESA was prepared in accordance with the terms and conditions of the contract/agreement for the work as executed between our firm and the client. There are no other special terms and conditions established between our firm and the client pertinent to the findings of this ESA or methodology used to complete this assessment. In addition, our firm has no final or other vested interest in the Site or adjacent/surrounding properties, or in any entity that owns or occupies the Site or adjacent/surrounding properties.

1.5 Limiting Conditions and Deviations

There were no significant limiting conditions that would inhibit our ability to identify recognized environmental conditions noted during the completion of this assessment. In addition, there were no deviations from the ASTM E1527 standard noted during the completion of this assessment. Any limiting conditions that are not considered to be ones that would inhibit our ability to identify recognized environmental conditions at the Site are referenced in applicable sections of this report.

1.6 Data Failure and Data Gaps

No instances of data failure were encountered during the completion of this assessment. In addition, no data gaps of significance (i.e. those that would inhibit our ability to identify recognized environmental conditions) were identified during the completion of this assessment. Any data gaps that are not considered to be ones that would inhibit our ability to identify recognized environmental conditions at the Site are referenced in applicable sections of this report.

1.7 Reliance

This report has been prepared for the exclusive use of the client. This report may not be relied upon by any other person or entity without the written consent of both our firm and our client. The scope of services performed for this assessment may not be appropriate to satisfy the specific needs of other users, and any use or reuse of this document would be at the sole risk of said users. Any other party seeking liability protection under CERCLA must take independent action to accomplish its objective.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site is identified by the legal address of 21611 S Perry Street and Los Angeles County Assessor's Parcel Numbers 7327-010-014 and -015. The Site is a reported 2.82 acres and is situated generally north of E Carson Street, south of E 215th Place, east of the Dominguez Channel and west of S Perry Street. A Vicinity Map is included as Figure 1. A Site Plan is included as Figure 2.

2.2 Site and Vicinity Characteristics

The Site and the surrounding vicinity are situated in an area of the City of Carson consisting primarily of commercial properties, residential development and petroleum storage activities. The Site vicinity and its adjoining properties are generally level.

2.3 Current Use of the Site

The Site is currently a vacant and undeveloped lot.

2.4 Description of Site Improvements

There are no habitable structures present at the Site. Various remnant improvements present at the Site include a concrete approach at the gated entrance to the Site (southeast corner), a metal gate and concrete pathway at the northeast corner of the Site, portions of former concrete slabs, concrete curbs and other features and landscaping. The Site is surrounded by chain-linked fencing and block walls. Indicators of various utility systems are also present at the Site. The nature of each of the subsurface features is unknown. A higher level of confidence regarding the nature of extent of surface indicators of subsurface features can be obtained from a utility or geophysical consultant.

2.5 Utilities

Utilities that are reported to be present at the Site or provide service in the surrounding area are noted below along with their municipal provider where applicable. If certain utility systems are not provided by public agencies or entities, they are noted as privately maintained.

Utility	Provider (Where Applicable)
Potable Water	California Water Service Company or Golden State Water Company.
Sewage Maintenance	County of Los Angeles Sanitation District.
Electrical	Southern California Edison.
Natural Gas	Southern California Gas Company.
Solid Waste Disposal	Waste Resources.

2.6 Description of Adjoining Properties

Adjoining properties are defined as any real property or properties, the border of which is contiguous or partially contiguous with that of the subject property of a Phase I ESA, or that would be contiguous or partially contiguous with that of a subject property but for a street, road, or other public thoroughfare separating them. To the extent feasible, our firm performed a visual inspection of adjoining properties

from the Site boundaries and along public right of ways. We did not encroach on to adjoining private property during the completion of this assessment. The following table identifies the adjoining property uses:

Direction	Adjoining Property Use
North	Residential development and E 215th Place.
South	E Carson Street and commercial properties.
East	S Perry Street and commercial and residential development.
West	Dominguez Channel.

3.0 PHYSICAL SETTING

3.1 Topography

The Site is depicted on the United States Geological Survey (USGS) topographic map for the Torrance, California 7.5-minute quadrangle. The Site is shown on the map as being situated at an elevation of approximately 20 feet above mean sea level. Site and surrounding area topography trends generally downward toward the south. There are no improvements, structures, or surface waters depicted on-Site on the map. Adjoining and surrounding roadways are depicted on the map. A Topographic Map is included as Figure 3.

3.2 Hydrology

The Site is situated within the Coastal Plain Of Los Angeles. There are no known substantial hydrologic features at the Site including major storm drain inlets, drainages, channels, or surface waters. The Dominquez Channel is adjacent to the west. Significant infiltration of precipitation is expected over the majority of the Site due to its unimproved nature. Any excess water would appear to flow as surface runoff to surrounding areas of lower elevation. Surface runoff at the Site and along adjacent roadways occurs as sheet flow. The Site does not appear to receive significant drainage from off-Site properties.

3.3 Geology

General geologic information pertaining to the Site is presented in the table below.

Geologic Consideration	Details
California Geomorphic Province	Peninsular Ranges.
Mapped Soils or Formation	Quaternary alluvium.
Description of Soils or Formation	Generally medium to coarse-grained sands, silts, clays and gravels.
Distance/Direction to Mapped Faults	No known faults are mapped on the Site. Please refer to the project geotechnical report for additional information.

3.4 Hydrogeology

General hydrogeologic information pertaining to the Site is presented in the table below.

Hydrogeologic Consideration	Details
Groundwater Basin or Unit	Coastal Plain Of Los Angeles.
Beneficial Uses	Municipal, industrial, process, and agricultural uses.
Estimated Depth to Groundwater	Measured at depths of approximately 12 to 18 feet below existing grades.
Estimated Flow of Groundwater	South to Southwest.

Hydrogeologic Consideration	Details
Known Site or Regional Groundwater Contamination Issues	There are known petroleum hydrocarbon impacts in groundwater beneath the Site. See the narrative below.

As stated above, there are known groundwater impacts at the Site. The most recent technical document pertaining to such impacts made available to our firm is titled 2020 First Semi-Annual Groundwater Monitoring Report, January through June 2020, Dominguez Channel Release, Carson, California, Cleanup and Abatement Order No. R4-2013-0007. The report was prepared by Aecom on behalf of Resource Environmental LLC (RELLC). Based on information included in the report, light non-aqueous phase liquid (LNAPL) began appearing within the Dominguez Channel (west of the Site) in January 2011. The LNAPL was reportedly observed entering into channel waters from sediments within the bottom of the channel and within horizontal, perforated sub-drain pipe systems installed within both the west and east channel levees.

In April 2011, the Los Angeles Regional Water Quality Control Board (LARWQCB) reportedly issued orders pursuant to Section 13267 of the California Water Code requiring potential responsible parties to assess contaminants of concern impacting soil, soil vapor, and groundwater at the Dominguez Channel and determine the extent that their facilities may have contributed to the release. URS Corporation (URS), on behalf of RELLC, implemented investigations for Shell Oil Products US (Shell) and Chevron Environmental Management Company (Chevron) within the channel and levees, the former Carson Air Harbor (CAH) property located at 21611 South Perry Street (i.e. subject Site of our current Phase I ESA), a former Texaco Station located at 1209 East Carson Street, a 76 Station located at 1025 East Carson Street, and the former Active RV property located at 1202 East Carson Street, and within several nearby streets/roadways. Investigations for BP Pipelines (North American), Inc. (BP) and Tesoro Corporation have also been prepared by Aecom and Orion Environmental Inc., respectively. Upon completion of the various assessment activities, the LARWQCB determined that the CAH property and the Texaco and 76 stations were not likely contributors to the LANPL releases and were granted no further action status relative to the Dominguez Channel issues. However, a separate case for the former CAH property was opened by the LARWQCB (Site Cleanup Program Case No. 0490C) due to other possible sources of contamination. That case was subsequently combined with nearby Case Nos. 0490A (Shell Pipeline Leak – Colony Holdings at 1211 East Carson Street) and 0490B (Shell Pipeline at 21500 South Perry Street) into a single Case No. 0490B entitled Shell Pipeline. A Cleanup and Abatement Order for the Dominguez Channel impacts was issued by the LARWQCB to BP, Chevron, Phillips 66, and Shell. One of the ongoing obligations under Case No. 0490B and the Order is to conduct groundwater monitoring and sampling of a myriad of wells, several of which are located on the subject Site (former CAH property).

There are upwards of 16 groundwater monitoring wells present at the Site that are used as part of the groundwater monitoring program. The wells are identified as MW-1, MW-2, MW-3, MW-4, MW-5, MW-6A, MW-6B, MW-7A, MW-7B, MW-7C, MW-8A, MW-8B, MW-8C, MW-9A, MW-9B and MW-9C. Primary groundwater contaminants of concern identified in these wells included total petroleum hydrocarbons in the gasoline range, benzene and diisopropyl ether. It was noted that concentrations in existing monitoring wells generally appeared to be stable or decreasing, with a few instances of fluctuation. In addition, groundwater elevations had generally been increasing over time. It was also noted that groundwater monitoring would continue on a semi-annual basis and would be next performed during the fourth quarter of 2020. An updated site conceptual model report would then be prepared. Excerpts of the groundwater monitoring report are included in Appendix A.

3.5 Oil and Gas Exploration

According to online resources provided by the California Department of Conservation, Geologic Energy Management Division (CalGEM), there are no oil, gas or geothermal wells located on the Site or its adjacent properties. Placards indicative of underground oil pipelines are present along the Dominguez Channel near the southwest corner of the Site.

4.0 USER PROVIDED INFORMATION

A representative of the user of this report (Faring Capital LLC) was interviewed during the completion of this assessment. The questions posed during the interview are defined by the ASTM E1527 practice. The client also provided our firm with any land title records and judicial records that may be available for the Site as part of the required evaluation for environmental liens and activity and use limitations (AULs) in connection with the subject property of a Phase I ESA. As stated in the ASTM E1527 practice, it is the responsibility of the user of the report to provide any available records pertaining to environmental liens and AULs that may exist in connection with a given property. Any land title and judicial recorded provided to our firm are discussed below. If such information is not discussed in the sections below, it was not provided by the user of the report. In addition to the contact information obtained, the user of the report was also asked if they are aware of other useful documents that may exist and if so whether copies can be provided to the environmental professional within reasonable time and cost constraints. A list of typical useful documents is included in Section 10.8.1 of the ASTM E1527 practice and include but are not limited to environmental assessment reports, compliance audits and permits, registrations for tank and other aboveground or underground systems, safety plans, spill prevention and other facility related plans and geological/geotechnical studies and environmental governmental agency notices and/or correspondence.

4.1 Title Records

A Preliminary Title Report issued by Commonwealth Land Title Insurance Company and dated August 4, 2020 was provided for our review. A Covenant and Environmental Restriction recorded against the Site by the LARWQCB is referenced in the title report. This document is dated July 8, 2015 and was recorded due to residual petroleum hydrocarbon contamination in the subsurface at the Site. Residual soil impacts are referenced as being the result of releases from off-Site pipelines and a former UST at the Site previously used for the storage of waste oil. It is further stated in the document that by way of excavation, the known contamination in soil had been reduced to levels protective of a commercial/industrial land use. In addition, reference is made to groundwater impacts beneath the Site. However, it is stated that such impacts are being addressed separately and do not affect the development and use restrictions in the Covenant. Article III of the Covenant outlines the restrictions on development and use of the Site. The key restrictions as noted in the document are as follows:

- Development and use of the Site shall be restricted to industrial, commercial and/or office spaces uses.
- Any future excavation work shall be conducted per the LARWQCB approved Soil Management Plan (SMP) and an appropriate Health and Safety Plan.
- A vapor barrier shall be incorporated in the design of any future structures that are constructed at the Site.

Another document referenced in the title report that pertains to residual petroleum impacts at the Site is an Access Agreement dated November 19, 2015 between a former owner of the Site and Triton Diagnostics Inc. (a subsidiary of Shell Oil Company). The document outlines provisions regarding access being granted to Shell as part of the ongoing groundwater monitoring being conducted at the Site in addition to roles and responsibilities of the parties as it pertains to future Site development activities. Key terms of the agreement include the following:

- Shell would be responsible for any future assessment and remedial work in the event the LARWQCB re-opened the soil related release case for the Site.
- Shell would be responsible for the cost of removal of contaminated soils encountered during future Site development that exceed commercial/industrial human health risk based screening levels.
- If groundwater monitoring wells require relocation due to Site development activities, Shell would be responsible for the cost of such work.

Copies of the title report, Covenant with attached SMP and the Access Agreement are included in Appendices B through D.

4.2 Environmental Liens

The client is unaware of environmental liens in connection with the Site.

4.3 Activity and Use Limitations

With the exception of the July 8, 2015 Covenant and Environmental Restriction recorded against the Site, the client is unaware of AULs in connection with the Site.

4.4 Specialized or Actual Knowledge or Experience

With the exception of residual petroleum impacts in the subsurface at the Site, the client is unaware of specialized knowledge, actual knowledge or experience that is material to recognized environmental conditions in connection with the Site.

4.5 Commonly Known or Reasonably Ascertainable Information

With the exception of residual petroleum impacts in the subsurface at the Site, the client is unaware of commonly known or reasonably ascertainable information within the local community that is material to recognized environmental conditions in connection with the Site.

4.6 Valuation Reduction for Environmental Issues

The client is unaware of information pertaining to an undervalued purchase price of the Site relative to the estimated fair market value of the Site due to the presence of contamination.

4.7 Owner, Property Manager, and Occupant Information

The Site is currently owned and managed by Recreation Road LLC. The Site is vacant with no known occupants.

4.8 Reason for Performing Phase I ESA

The client has commissioned this Phase I ESA as part of a proposed real estate transaction and future Site development for commercial purposes. The Phase I ESA is also being completed to assist the client in complying with 40 CFR Part 312.

4.9 Proceedings Involving the Site

The client is unaware of pending, threatened, or past litigation and administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site. The client is also unaware of notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products in connection with the Site.

4.10 Other Provided Documents

A prior Phase I ESA for the Site was provided to us for review. The report is dated February 28, 2019, and was prepared by Advanced Geoenvironmental. At the time of the assessment, the Site was a vacant and undeveloped lot, similar to the present. The Phase I ESA was completed in accordance with applicable standards and included a review of historical resources and regulatory records, a physical inspection of the Site and interviews. Summaries of select prior environmental documents were also included in the report. Relative to on-Site soil impacts resulting from historical Site activities, a Soil Excavation Report for the Site dated December 15, 2014 was summarized and included as an appendix to the Phase I ESA report. The report was prepared by URS on behalf of Shell Oil Products US.

As stated in the report, petroleum hydrocarbon-impacted soil and groundwater were identified at the Site during various investigations beginning in 1990. Several of the prior assessments are summarized in the URS report. Historical metal fabrication operations and migration of off-property impacts onto the Site were notes as the sources of the petroleum hydrocarbons. To address Site impacts to soil in order to redevelop the Site for commercial/industrial use, a Soil Excavation Workplan was developed by URS in 2014 following a September 30, 2013 meeting and subsequent follow-up phone conversations and e-mail with the LARWQCB regarding the cleanup goals and excavation limits. The Soil Excavation Workplan was approved on April 21, 2014.

Between September 9 and October 8, 2014, 7,255.69 tons (approximately 4,837 in-place cubic yards assuming 1.5 tons per cubic yard) of impacted soil were excavated from the Site and disposed off-Site. The impacted soil was removed from four distinct areas to depths ranging from approximately five to eight feet. Confirmation soil samples were obtained from the sidewalls and bottoms of the excavations. San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers were utilized as action levels to guide the extent of the remedial excavations. Once all confirmation soil samples exhibited concentrations of petroleum hydrocarbons and volatile organic compounds (VOCs) below the ESLs, the excavations were deemed complete. The excavated areas were then backfilled with imported clean fill or with an approximate 50:50 mix of crushed concrete and imported fill and a small amount of clean overburden soil. The crushed concrete was generated during the demolition of former Site improvements. Prior to its reuse, the material was sampled and analyzed for various contaminants of potential concern. Any detections of metals and/or organic compounds were below applicable screening levels. Upon review of the data, the LARWQCB approved the reuse of the crushed concrete. Excerpts of the excavation report are included as Appendix E. A letter documenting the LARWQCB approval of the crushed concrete is included as Appendix F.

URS concluded that based on confirmation soil sampling for each of the excavations, the cleanup criteria set out in the workplan had been met. URS also stated that a SMP for the Site was prepared to mitigate potential future exposure to residual petroleum hydrocarbons and odor generation during future Site development. URS also stated that a deed restriction limiting future Site use to commercial/industrial uses and requiring . It was also noted in the report that a vapor barrier would be incorporated in the design of any future structures that are constructed at the Site. URS requested that

the LARWQCB issue a no further action letter for vadose zone soils at the Site. The LARWQCB reviewed the report and concurred with its findings. A no further action letter for soil was issued by the LARWQCB on December 14, 2015. A copy of the letter is included in Appendix G.

The following recognized environmental conditions were noted in the 2019 Advanced Geoenvironmental Phase I ESA:

- Controlled Recognized Environmental Condition - A previous petroleum hydrocarbon release occurring on the property from past UST use. Petroleum hydrocarbon and VOC impact to soil remains in place at the Site over residential screening levels. An environmental deed restriction has been placed on the Site which limits the Site use to commercial/industrial, and also requires the construction of engineering controls beneath any building constructed on the Site.
- Recognized Environmental Condition - Groundwater beneath the Site is impacted with petroleum hydrocarbons and VOCs. The groundwater impact originated from an oil pipeline release at the adjacent, upgradient properties. Groundwater assessment activities are currently on going. Regulatory agencies overseeing the groundwater in the area have combined the Site and two additional properties into one case, however, past and present ownership of the Site has not been deemed a responsible party.

Based on the information obtained during the completion of the Phase I ESA, it was Advanced Geoenvironmental's opinion that additional environmental assessment was not warranted at the Site.

5.0 REGULATORY RECORDS REVIEW

Our firm commissioned the preparation of a regulatory database report from Environmental Risk Information Services (ERIS) as part of the regulatory records review. ERIS searches a myriad of Federal, State, and local government environmental databases during the preparation of their deliverables. Certain databases are specifically required by the ASTM E1527 practice and are referenced as "standard ASTM regulatory databases." Such databases are searched to at least the minimum search distance around a given property as defined in the practice. Other regulatory databases are also searched that are not specifically referenced in ASTM E1527. Such databases are referenced as "non-ASTM regulatory databases" and are searched as varying radii around a given property as selected by ERIS.

Descriptions of each database searched and the dates that the regulatory databases were last updated by the applicable agencies are included in the ERIS report. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of an updates. ERIS updates databases in accordance with ASTM E1527 which states that government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public.

Our firm also reviewed unplottable sites listed in the database report by cross-referencing reasonably ascertainable information pertaining to such properties that may include facility names, street names, zip codes or other information. Unplottable sites are ones that cannot be formally mapped or geocoded due to various reasons, including limited geographic information. Any unplottable sites that we identify within the specified search radii have been evaluated as part of the preparation of this report. A copy of the regulatory database report is included in Appendix H.

5.1 Standard ASTM Regulatory Database Search

The tables below present the standard Federal, State, Tribal and local ASTM databases that were searched by ERIS including the search distances from the Site. Below the tables are descriptions of any listings for the Site that may appear in the databases. In addition, a discussion of adjoining properties or properties in the Site vicinity that are listed in one or more regulatory databases that in our professional judgment and opinion have the potential to adversely impact the Site due to current or former releases of hazardous substances and/or petroleum products that occurred at said properties is presented. This practice of discussing only properties of potential environmental concern to the Site is noted in ASTM E1527 which states that the environmental professional may make statements applicable to multiple properties listed in regulatory databases that are not likely to have current or former releases of hazardous substances and/or petroleum products with the potential to migrate to the a given subject property. Our professional judgment and opinions discussed herein are based on several factors including the nature of the regulatory database listings, distance of the off-Site listed properties from the Site, orientation of the listed properties relative to the Site, interpreted the direction of groundwater flow and/or regulatory case status information for the various properties as described in the databases.

The following Federal standard ASTM databases were searched:

Standard Environmental Record Source Name	ERIS Regulatory Database Identification	Search Distance From Site (Miles)
National Priorities List (NPL) Site List	NPL – Proposed NPL – Superfund Record of Decision (ROD)	1.0
Delisted NPL Site List	Deleted NPL	0.5
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List	CERCLIS - SEMS – SEMS Archive – ODI – IODI – CERCLIS LIENS – SEMS LIENS	0.5
CERCLIS List	CERCLIS LIENS – SEMS LIENS	Site
CERCLIS No Further Remedial Action Planned (NFRAP) Site List	CERCLIS NFRAP	0.5
Resource Conservation and Recovery Act (RCRA) Corrective Action Sites (CORRACTS) Facilities List	RCRA CORRACTS	1.0
RCRA Non-CORRACTS Treatment, Storage and Disposal (TSD) Facilities List	RCRA TSD	0.5
RCRA Generators List	RCRA LQG – RCRA SQG – RCRA CESQG – RCRA NON-GEN – BULK TERMINAL – REFN – FEMA Underground Storage Tank (UST) - FRP	0.25
Institutional Control/Engineering Control Registries	FED ENG – FED INST – FED Brownfields	0.5
Emergency Response Notification System (ERNS) List	ERNS – ERNS 1982 to 1986 – ERNS 1987 to 1989	Site

Site – The Site is listed on the RCRA SQG database as Air Harbor Machine Co Inc. and Shell Oil Co. There are no violations reported for these listings.

Other Properties – There are numerous properties mapped within a one mile radius of the Site that are listed on various Federal ASTM regulatory databases including NPL (one listing), SEMS (one listing), RCRA CORRACTS (three listings), RCRA TSD (four listings), RCRA LQG (two listings), RCRA SQG (three listings), RCRA NON GEN (21 listings), FED BROWNFIELDS (one listing) and SUPERFUND ROD (one listing). Several of the listings pertain to impacts reported in the western adjacent Dominguez Channel and also as a result of adjoining or nearby pipelines as discussed in Sections 4.1 and 4.10 of this report. As stated previously, off-Site migration of petroleum hydrocarbons to the Site has occurred from properties in the area.

The following State, Tribal and local standard ASTM databases were searched:

Standard Environmental Record Sources Name	EDR Regulatory Database Identification	Search Distance From Site (Miles)
Equivalent NPL	RESPONSE - HWP	1.0
Equivalent CERCLIS	ENVIROSTOR – DELISTED ENVS	0.5

Standard Environmental Record Sources Name	EDR Regulatory Database Identification	Search Distance From Site (Miles)
Landfill and/or Solid Waste Disposal Site Lists	SWF/LF – SWAT – LDS – SWRCB SWF – LA SWF	0.5
Leaking Storage Tank Lists	LUST – DELISTED LST – CLEANUP SITES - INDIAN LUST – DELISTED ILST – LA SML	0.5
Registered Storage Tank Lists	UST – AST – UST CLOSURE – HHSS – TANK OIL GAS – DELISTED TNK - CERS TANK – DELISTED COUNTY – DELISTED CTNK – HIST TANK - INDIAN UST - DELISTED IUST – LA COUNTY CUPA – LA HMS – UST LA CITY – AST LA CITY	Site and Adjoining Properties
Institutional Control/Engineering Control Registries	DEED - LUR – HLUR	Site
Voluntary Cleanup Sites	VCP	0.5
Brownfield Sites	Not Applicable – No Database Exists	0.5

Site – The Site is listed on the CLEANUP SITES and DEED State regulatory databases as Carson Air Property. The Site is referenced with a closed regulatory status as of October 23, 2015 and with a Covenant and Environmental Restriction recorded on the Site. Information in the database listings is consistent with that described in Sections 4.1 and 4.10 of this report. The Site is also listed on the local LA County CUPA and LA HMS regulatory databases as Air Harbor Machine Co Inc. and 21611 S Perry Street, respectively. No details are provided in the LA County CUPA database listing. The LA HMS database listing pertains to closed permits pertaining to waste generation and stormwater.

Other Properties – There are numerous properties mapped within a one mile radius of the Site that are listed on various State and Local ASTM regulatory databases including ENVIROSTOR (20 listings), SWF/LF (two listings), HWP (three listings), LDS (one listing), LUST (two listings), UST (one listing), HHSS (two listings), DELISTED TNK (one listing), CERS TANK (one listing), LUR (one listing), VCP (two listings), CLEANUP Sites (23 listings), HIST TANK (two listings), LA SML (one listing), LA SWF (two listings), LA COUNTY CUPA (10 listings) and LA HMS (17 listings). . None of these properties are considered to have the potential to adversely impact the Site. Several of the listings pertain to the impacts reported in the western adjacent Dominguez Channel and also as a result of adjoining or nearby pipelines. As stated previously, off-Site migration of petroleum hydrocarbons to the Site has occurred from properties in the area.

5.2 Non-ASTM Regulatory Database Search

A myriad of non-ASTM regulatory databases was searched by ERIS as noted in the regulatory database report.

Site – The Site is listed on the non-ASTM FINDS/FRS, HAZNET and HIST MANIFEST regulatory database as Air Harbor Machine Co Inc., Carson Air Harbor, Shell Oil Co., Beach Boats Inc., Carson Trailers, Triton Diagnostics Inc. and 21611 Perry Street. 20th Century Fox, Inc. The listings pertain to

the manifesting and removal of various wastes (primarily petroleum hydrocarbon derived). Such wastes include used/mixed soil and contaminated soils from cleanup activities.

Other Properties – There are several properties mapped within a one mile radius of the Site that are listed on various non-ASTM regulatory databases including DRYCLEANERS (three listings), DRYC GRANT (one listing), HAZNET (one listing), CERS HAZ (one listing) and EMISSIONS (two listings). Several of the listings pertain to impacts reported in the western adjacent Dominguez Channel and also as a result of adjoining or nearby pipelines. As stated previously, off-Site migration of petroleum hydrocarbons to the Site has occurred from properties in the area.

5.3 Regulatory Agency File Reviews

If a property being assessed under a Phase I ESA or any of the adjoining properties are identified on one or more of the above referenced standard environmental record sources, pertinent regulatory files and/or records associated with such listings should be reviewed to assist the environmental professional in evaluating if recognized environmental conditions existing at a given subject property in connection with any listings. However, if in the environmental professional's opinion, such a review is not warranted, file reviews need not be conducted if the environmental professional provides justification for not doing so.

Agency file reviews for the Site completed during this assessment are noted below. No file reviews for adjoining properties or properties in the surrounding area were deemed warranted with the exception of research completed on the State of California Water Resources Control Board Geotracker database for properties in the surrounding area. The agency inquiries were performed by way of on-line searches/queries of published databases and/or direct inquiries with public records clerks at one or more agencies. Daniel Weis of Weis Environmental conducted the agency file reviews during the completion of this assessment.

Regulatory Agency	Jurisdiction	Date of Inquiry or Request	Contact	Response or Information From Agency
United States EPA	Federal	12/31/2020	Online https://enviro.epa.gov/	Records Identified
California Department of Toxic Substances Control	State	12/31/2020	Online https://www.envirostor.dtsc.ca.gov/public/ https://hwts.dtsc.ca.gov/report_list.cfm	No Records Identified
State Water Resources Control Board/Regional Water Quality Control Board	State	12/7/2020	Online https://geotracker.waterboards.ca.gov/ https://geotracker.waterboards.ca.gov/historical_ust_facilities	Records Identified
Los Angeles County	Local	12/31/2020	Public Records Clerk	Records Identified

As shown in the table above, records were identified in files with the United States EPA, LARWQCB and Los Angeles County. Information included in the records is consistent with information previously described in Sections 4.1 and 4.10 of this report with documents included in the previously referenced appendices. Records obtained from Los Angeles County are included in Appendix I.

6.0 HISTORICAL RESOURCE REVIEW

The objective of consulting historical sources is to develop a history of the previous uses of a property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with a given property. The goal of the historical research is to identify all obvious uses of a subject property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. The environmental professional exercises professional judgment in reviewing only as many of the standard historical sources referenced in ASTM E1527 that are deemed necessary, are reasonably ascertainable and are likely to be useful. Historical resources reviewed during the completion of this assessment are referenced below. Copies of the historical resources are included in Appendix J. The copies of the historical resources were obtained from the prior Phase I ESA completed for the Site in 2019. As stated in ASTM E1527, standard historical sources reviewed as part of a prior environmental site assessment do not need to be searched for again, but uses of the property since the prior environmental site assessment should be identified either through standard historical sources or by alternatives to standard historical sources. Because the use of the Site has not changed since the prior assessment completed in 2019, additional historical research other than that which is summarized below is not warranted.

6.1 Aerial Photographs

We reviewed historical aerial photographs from the years 1928, 1947, 1952, 1963, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012 and 2016 provided by Environmental Data Resources, Inc. (EDR). The table below presents the results of the photograph review.

Photograph Year	Site Observations	Adjoining Property Observations
1928, 1947, 1952	The Site appears to be vacant and possibly used for agricultural purposes.	Adjoining properties are generally vacant or used for agricultural purposes. Scattered residential structures are visible. The Dominguez Channel is visible to the west. Petroleum bulk storage activity is visible nearby to the north.
1962	The Site appears to be under construction.	Adjoining properties are generally similar to the prior photographs. Interstate 405 is visible nearby to the west.
1977, 1983, 1989, 1994, 2002, 2005, 2009	The Site appears to be developed with the former commercial/industrial building and other improvements.	Adjoining properties are generally used for residential and commercial purposes.
2012, 2016	The Site is a vacant lot.	Adjoining properties are generally used for residential and commercial purposes.

As stated above, the Site was potentially historically used for agricultural activities. During historical agricultural activities throughout the State of California, organochlorine pesticides (OCPs) were commonly and legally applied during the normal course of agricultural operations. Such compounds have since been banned from production and use in the United States. Section 105215 of the California Health and Safety Code discusses the regulatory reporting of incidents that pertain to pesticide spills and accidental releases of pesticide products. No information has been revealed that would lead us to believe that an accidental spill or release of pesticide products has occurred at the Site. In addition, neither stressed vegetation nor evidence of the storage of OCP based chemical products based on

regulatory and historical research reviews. In addition, the Site was redeveloped for commercial/industrial purposes following its possible prior agricultural uses. As such, the historical agricultural use of the Site is not considered to be a recognized environmental condition in connection with the Site.

6.2 City Directories

Our firm reviewed city directories dated ranging in date from 1920 to 2014 provided by EDR. The following listings for the Site were noted in the directories:

- 1962 – Air Comfort Co Inc., Plan Hold Corp
- 1975, 1976, 1980, 1981, 1985, 1986 – Air Harbor Machine Co Inc.
- 1990 – Aaire RV & Marine, Inc, Air-Harbor Machine Co Inc. Carson, American Seacraft Marine Inc., Pacific Yacht Sales
- 2001 – Carson Trailer
- 2006 – Carson Trailer Sales

Adjoining and nearby properties in the surrounding area are primarily referenced as being used for residential (personal names) and general retail, commercial and industrial purposes.

6.3 Fire Insurance Maps

Fire insurance maps are not published for the Site.

6.4 Other Historical Sources

Other historical sources are referenced in the ASTM E1527 practice as any source or sources other than the standard historical sources referenced in the practice that are credible to a reasonable person and that identify past uses of a subject property. This category includes, but is not limited to miscellaneous maps, newspaper archives, internet sites, community organizations, local libraries, historical societies, current owners or occupants of neighboring properties, or records in the files and/or personal knowledge of the property owner and/or occupants. No historical sources other than the standard sources described above were deemed necessary and useful to assist in identifying recognized environmental conditions.

7.0 SITE RECONAISSANCE

The objective of the Site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with a subject property. The Site visit for our assessment was completed by Daniel Weis, on December 31, 2020. Mr. Weis was unaccompanied during the reconnaissance.

7.1 Methodology and Limiting Conditions

The Site reconnaissance consisted of walking multiple transects across the Site as well as walking publicly accessible areas surrounding the Site. No significant limiting conditions of the Site inspection were noted. Select photographs of the Site obtained during the Site reconnaissance are included in Appendix K.

7.2 Current General Site and Vicinity Characteristics

The Site and the surrounding vicinity are situated in an area of the City of Carson consisting primarily of commercial properties, residential development and petroleum storage activities. The Site vicinity and its adjoining properties are generally level. The Site is currently a vacant and undeveloped lot.

7.3 Indications of Past Site and Vicinity Uses

There are no material differences between the current and past uses of the Site, adjoining properties and the surrounding area Site that were visually and/or physically observed during the Site reconnaissance that pertain to recognized environmental conditions.

7.4 Site-Specific Observations

We examined visible and accessible areas of the Site for the features and conditions noted in the table below.

Feature or Condition	Details
General Description of Structures	There are no habitable structures present at the Site. Various remnant improvements present at the Site include a concrete approach at the gated entrance to the Site (southeast corner), a metal gate and concrete pathway at the northeast corner of the Site, portions of former concrete slabs, concrete curbs and other features and landscaping. The Site is surrounded by chain-linked fencing and block walls. Indicators of various utility systems are also present at the Site. The nature of each of the subsurface features is unknown. A higher level of confidence regarding the nature of extent of surface indicators of subsurface features can be obtained from a utility or geophysical consultant.
Drains and Sumps	None observed.
Heating/Cooling Systems	None observed.
Potable Water Supply	California Water Service Company or Golden State Water Company
Roads	None observed. Ingress and egress is from a paved approach in the southeastern portion of the Site.

Feature or Condition	Details
Septic Systems / Sewage Disposal System	County of Los Angeles Sanitation District
Wastewater and Stormwater Discharges	None observed.
Wells	There are several groundwater monitoring wells present at the Site as previously discussed in this report.
Drums	None observed.
Electrical or Hydraulic Equipment Known to Contain PCBs or Likely to Contain PCBs	None observed.
Hazardous Substances and Petroleum Products in Connection with Identified Uses	None observed.
Hazardous Substance and Petroleum Products Not Necessarily in Connection With Identified Uses	None observed.
Odors	None noted.
Pits, Ponds or Lagoons	None observed.
Pools of Liquid	None observed.
Solid Waste (Including Fill Material)	Miscellaneous debris including concrete, brick, rebar and plastic and paper products are present in scattered areas at the Site.
Stained Soil or Pavement	None observed.
Stains or Corrosion	None observed.
Chemical Storage Tanks	None observed.
Stressed Vegetation	None observed.
Unidentified Substance Containers	None observed.

8.0 INTERVIEWS

Persons interviewed during the completion of this assessment are noted in the table below. Descriptions of the information obtained from interviews completed during this assessment are included in the Sections below. Daniel Weis conducted the interviews during the completion of this assessment.

8.1 Site Owner

We were informed that the Site owner's knowledge regarding environmental conditions at the Site is consistent with that which is described in the myriad of environmental documents pertaining to the Site.

8.2 Key Site Manager

The Site owner representative is also considered to be the Key Site Manager. Please refer to Section 8.1 above.

8.3 Current Occupants

The Site is vacant with no known occupants.

8.4 Local Government Official

We interviewed Ms. Jeanette Liu of the LARWQCB regarding the Site. Mr. Liu confirmed the closure of the agency closure of the Site relative to soil and the ongoing assessment work being completed at the Site relative to evaluations of groundwater impacts that have resulted from off-Site locations. We were also informed that a new case will not need to be opened for the future planned Site development as long as the requirements under the Covenant and Environmental Restriction are complied with. These include adhering to the SMP for the Site, conducting construction activities under a Health and Safety Plan and ensuring that a proper vapor barrier is installed beneath future buildings. In addition, the LARWCB will not require a review of future vapor barrier design plans/specifications. Such a review would fall under the purview of the City of Carson as part of general construction plan design submittal and approval.

8.5 Other Parties

Interviews with other persons were not conducted during the preparation of this assessment. As stated in the ASTM E1527 practice, interviews with past owners, operators, and occupants of a subject property who are likely to have material information regarding the potential for contamination at a given property shall be conducted to the extent that they have been identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Interviews with persons with past association with the Site were not deemed warranted during the completion of this assessment.

9.0 ADDITIONAL SERVICES – NON-SCOPE ASTM CONSIDERATIONS

Several non-scope ASTM considerations are referenced in the ASTM E1527 practice that a user of a report may wish to evaluate. Listed considerations in the practice include asbestos-containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality (unrelated to releases of hazardous substances or petroleum products into the environment), industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, and wetlands. No implication is intended by the practice as to the relative importance of inquiry into such non-scope considerations, and the list of considerations is not intended to be all-inclusive. An evaluation of one or more of the non-scope considerations was not requested of our firm as part of the scope of services for the assessment. Therefore, no findings, opinions and conclusions of this assessment are based on said non-scope ASTM considerations.

10.0 FINDINGS AND OPINIONS

With the exception of the known residual petroleum hydrocarbon impacts in soil beneath the Site (below commercial/industrial screening levels) and the known groundwater impacts that have resulted from off-Site sources, no features and/or conditions indicating the presence or likely presence of hazardous substances and/or petroleum products at the Site were identified during the completion of this assessment. Residual soil impacts are considered to be a controlled recognized environmental condition that does not require additional assessment at the time. Any residual petroleum impacted soil that is encountered at the Site during development (if any) will be handled in accordance with the SMP under conventional means and methods. Known groundwater impacts beneath the Site are considered to be recognized environmental condition that also does not require additional assessment at the time. The responsible parties for said impacts are required by the LARWQCB to assess and remediate (if required) groundwater impacts in the area resulting from their unauthorized releases.

11.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM International Practice E1527 of the Site identified 21611 S Perry Street in the City of Carson, County of Los Angeles, California (Los Angeles County Assessor's Parcel Number 7327-010-014 and -015). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. This assessment has revealed the following in connection with the Site:

- Controlled Recognized Environmental Condition - Residual petroleum hydrocarbon soil impacts present at the Site.
- Recognized Environmental Condition - Known petroleum hydrocarbon groundwater impacts beneath the Site.

As stated previously, we do not recommend that the client complete additional environmental assessment at the Site at this time. Any residual petroleum impacted soil that is encountered at the Site during development (if any) will be handled in accordance with the SMP under conventional means and methods, and any future assessment and remediation of groundwater would be required to be completed by the responsible parties of the unauthorized releases. With adherence to the SMP and Environmental Covenant recorded against the Site, the Site can be redeveloped for its intended commercial use.

12.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in Section 312.10 of 40 CFR. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Qualifications of personnel involved with the completion of this report are included in Appendix L.

_____

Daniel Weis, R.E.H.S.
Environmental Manager

13.0 ASSUMPTIONS

No Phase I ESA effort can eliminate uncertainty regarding the potential for recognized environmental conditions to exist in connection with a given property. Performance of the ASTM E1527 practice may reduce such uncertainty but in no way should the findings and report be misconstrued as insurance or a guarantee regarding the potential for recognized environmental conditions in connection with a given property. The ASTM E1527 practice recognizes reasonable limits of time and cost relative to the completion of a Phase I ESA.

During the completion of this ESA, our firm relied on certain information obtained from secondary sources, including but not limited to the user of the report, government agencies, historical research business entities, environmental databases, and interviews with one or more persons. The sources obtained and/or consulted are assumed to be reliable. However, our firm cannot warranty or guarantee that the information provided by these other sources is wholly accurate or complete. Our firm is not responsible for any misrepresentations or false statements that may be provided by others or the lack of pertinent/relevant information that should have been provided/disclosed by others and we assume no responsibility for any consequence as a result of such omissions or withheld information.

Accuracy and completeness of records varies among information sources, including from governmental agencies. As a result, there is a possibility that even with the proper application of the methodologies presented in ASTM E1527, conditions may exist that could not be identified within the scope of this assessment or which were not reasonably identifiable from the available information. In addition, any responses received from Federal, State, Tribal, and local regulatory agency secondary sources of information after the issuance of this report may change certain findings and conclusions of this report.

Estimations and opinions regarding the potential for off-Site properties to adversely impact a given subject property is one of the key components of a Phase I ESA. In most cases, recent property-specific or adjacent-property specific measured groundwater data or other hydrogeological information is not reasonably ascertainable. In the absence of such data, reasonable assumptions regarding the depth and flow of groundwater are made based on various sources including comparisons to surface elevations, land topography and available hydrogeological on the State of California Geotracker database. In addition, estimations and opinions regarding potential impacts from off-Site locations may be based on certain assumptions that a hazardous substance or petroleum product may not migrate laterally within unsaturated soil for a substantial distance and that contaminants that have reached saturated soil and groundwater may attenuate over time and/or may decrease in concentration relative to distance from its source. While any interpretations presented herein may be effective in reducing uncertainty regarding potential impacts to a subject property from off-Site locations, in no way should the findings and report be misconstrued as insurance or a guarantee regarding the potential for such impacts to occur. Greater certainty regarding subsurface conditions at a given property can only be achieved by way of a subsurface sampling effort of one or more media.

14.0 DEFINITIONS

Definitions of key terminology relevant to the ASTM E1527 practice are presented below.

Recognized Environmental Condition - The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Controlled Recognized Environmental Condition - A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Data Failure - A failure to achieve the historical research objectives as outlined in the ASTM E1527 practice even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Data Gap - A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by the ASTM E1527 practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.). Data gaps are only considered to be significant if they affect the ability of the environmental professional to identify recognized environmental conditions.

De Minimis Condition - A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Environment - (A) the navigable waters, the waters of the contiguous zone, and the ocean waters of which the natural resources are under the exclusive management authority of the United States under the Magnuson-Stevens Fishery Conservation and Management Act [16 U.S.C. §§ 1801 et seq.], and (B) any other surface water, groundwater, drinking water supply, land surface or subsurface strata, or ambient air within the United States or under the jurisdiction of the United States.

Good Faith - The absence of any intention to seek an unfair advantage or to defraud another party; an honest and sincere intention to fulfill one's obligations in the conduct or transaction concerned.

Hazardous Substance - Includes hazardous substances designated under section 311 of the Clean Water Act (CWA) or Section 102 of CERCLA, any toxic pollutant listed under Section 307(a) of the CWA, any waste that has been listed as a RCRA hazardous waste or possesses a RCRA hazardous waste characteristic, any substance that is identified as a hazardous pollutant under Section 112 of the Clean Air Act (CAA), and any imminently hazardous chemical that EPA has taken action pursuant to Section 7 of the Toxic Substances Control Act (TSCA).

Historical Recognized Environmental Condition - A past release of any hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or

meeting unrestricted use criteria established by a regulatory authority, without subjecting the property in question to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Petroleum Exclusion – While the definition of a CERCLA hazardous substance specifically excludes petroleum products and crude oil, the EPA has determined that the petroleum exclusion applies to petroleum products such as gasoline and other fuels containing lead, benzene or other hazardous substances that are normally added during the refining process. Notwithstanding the existence of the petroleum exclusion, petroleum products are included within the scope of the ASTM E1527 practice for multiple reasons. Petroleum products have historically been widely used at commercial properties. In addition, other federal and state laws may impose liability for releases or spills of petroleum products.

Reasonably Ascertainable Information - Information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints and (3) practically reviewable.

Release or Threatened Release - Spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping or disposing into the environment (including the abandonment or discarding of barrels, containers and other closed receptacles containing any hazardous substance, or pollutant or contaminant).

RE: 2020 FIRST SEMI-ANNUAL GROUNDWATER MONITORING REPORT
JANUARY THROUGH JUNE 2020
DOMINGUEZ CHANNEL RELEASE
CARSON, CALIFORNIA
CLEANUP AND ABATEMENT ORDER NO. R4-2013-0007

Dear Mr. Nima:

On behalf of Resource Environmental L.L.C. (RELLC, an environmental management company), AECOM has prepared this *2020 First Semi-Annual Groundwater Monitoring Report* for Dominguez Channel south of East Carson Street in Carson, California (Site; see Figure 1).

The groundwater monitoring program for this semi-annual event includes gauging and/or sampling of the existing groundwater monitoring wells within the A, B, and C Zones adjacent to the Dominguez Channel south of East Carson Street (including nearby Recreation Road to the southwest and Ashmill and Cloverbrook Streets to the northeast), at the former Active RV property located at 1202 East Carson Street (former Active RV site), and at/adjacent to the former Texaco Service Station located at 1209 East Carson Street (former Texaco site). Collectively, these areas are herein referred to as the "Project Area."

This report has been prepared for submittal to the California Regional Water Quality Control Board, Los Angeles Region (LARWQCB), and presents the results for the 2020 first semi-annual groundwater monitoring event. The groundwater monitoring was conducted in accordance with the May 6, 2013 *Groundwater Monitoring Work Plan* (URS, 2013), that was approved by the LARWQCB on May 9, 2013.

BACKGROUND

Light non-aqueous phase liquid (LNAPL) started appearing within the Dominguez Channel south of the Carson Street Bridge in January 2011. The LNAPL was reportedly observed entering into channel waters from sediments within the bottom of the channel and within horizontal, perforated sub-drain pipe systems installed within both the west and east channel levees. The LARWQCB has been working in collaboration with other agencies, to facilitate the assessment and remedy of the release.

In April 2011, the LARWQCB issued orders pursuant to Section 13267 of the California Water Code requiring potential responsible parties to assess contaminants of concern impacting soil, soil vapor, and groundwater at the Dominguez Channel and determine the extent that their facilities may

AECOM
999 Town & Country Road
Orange, CA 92868
Tel: 714.567.2400

have contributed to the release. URS Corporation (URS), on behalf of RELLC, implemented investigations for Shell Oil Products US (Shell) and Chevron Environmental Management Company (Chevron) within the channel and levees, the former Carson Air Harbor (CAH) property located at 21611 South Perry Street, the former Texaco Station located at 1209 East Carson Street, the 76 Station located at 1025 East Carson Street, and the former Active RV property located at 1202 East Carson Street, and within several nearby streets. Investigations for BP Pipelines (North American), Inc. (BP) and Tesoro Corporation have been prepared by AECOM and Orion Environmental Inc., respectively.

Based on the results presented in the *Light Non-Aqueous Phase Liquid Release Assessment Report, Dominguez Channel South of Carson Street, Carson, California* dated October 20, 2011 (URS, 2011), the LARWQCB issued letters to RELLC indicating that the former CAH property, former Texaco Station, and 76 Station were not likely contributors to LNAPL releases in the Dominguez Channel and granted No Further Action (NFA) determinations in association with the Dominguez Channel LNAPL investigation. The LARWQCB recommended that the former Texaco Station and 76 Station sites be transferred back to the Underground Storage Tank (UST) Program because petroleum hydrocarbon impacts related to UST operations remain at the sites. The former Texaco Station was granted closure on March 9, 2015. Several wells both onsite and offsite were destroyed in February 2015; however, the responsibility of the remaining former Texaco Station wells was transferred to RELLC as part of the Dominguez Channel assessment project. The LARWQCB Site Cleanup Program Case No. 0490C for the former CAH property remains active due to onsite and offsite groundwater contamination; however, it has been combined with nearby Case Nos. 0490A (Shell Pipeline Leak – Colony Holdings at 1211 East Carson Street) and 0490B (Shell Pipeline at 21500 South Perry Street) into a single Case No. 0490B entitled Shell Pipeline.

On February 8, 2013, the LARWQCB issued Cleanup and Abatement Order (CAO) No. R4-2013-0007 to BP, Chevron, Phillips 66, and Shell. The CAO requires these responsible parties to cleanup waste and abate the effects of the discharges of waste, specifically petroleum hydrocarbons, to the Dominguez Channel and within the sub-drain pipe system located in the Dominguez Channel levees, and of petroleum hydrocarbons within soil, soil gas, and groundwater near the Dominguez Channel. Letters have been provided to the LARWQCB from Chevron (which also represents Phillips 66), Shell, and BP (effective May 3, 2013) acknowledging RELLC's role to act on their behalf in all future matters before regulatory agencies with regard to this effort.

In response to CAO No. R4-2013-0007, a *Groundwater Monitoring Work Plan* dated May 6, 2013 was prepared by URS on behalf of RELLC (URS, 2013). Per the work plan, groundwater monitoring is to be performed on a semi-annual basis using the A and B Zone groundwater monitoring wells and on a biennial basis using the C Zone groundwater monitoring wells (in addition to the A and B Zone wells). The work plan was approved by the LARWQCB on May 9, 2013, with two requirements:

1. Submit Groundwater Monitoring Reports in accordance with the Time Schedule (Directive 8) within the CAO, and
2. Groundwater Monitoring Reports need to include figures depicting groundwater elevations with the groundwater flow direction for the A Zone and B Zone on a semiannual basis and for the C Zone on a biennial basis, and separate contour maps showing detections of petroleum constituents in groundwater.

These requirements constitute an amendment to the requirements of the CAO.

Groundwater monitoring activities at the Site began in August 2011 and are conducted semi-

annually (except for the second half of 2012). Per the *Groundwater Monitoring Work Plan* approval letter, the first biennial monitoring was performed during the first semi-annual event of 2014.

GROUNDWATER MONITORING ACTIVITIES

Field activities that were completed for the 2020 first semi-annual groundwater monitoring event, which was conducted between April 20 and 23, 2020, included the following:

Dominguez Channel

- Gauging and sampling 16 A, B, or A/B Zone wells (R-MW-1, R-MW-1B, R-MW-2, R-MW-3, R-MW-5, R-MW-6B, R-MW-7A, R-MW-7B, R-MW-8A, R-MW-8B, R-MW-9B, R-MW-10A, R-MW-13B, R-MW-14B, R-MW-16A, and R-MW-16B)
- Gauging and sampling three C Zone wells (R-MW-1C, R-MW-6C, and R-MW-10C)
- Gauging five wells with LNAPL (R-MW-6, R-MW-10B, R-MW-11, R-MW-12, and R-MW-15)
- Gauging only two A Zone wells (R-MW-13A and R-MW-14A) and one A/B Zone well (R-MW-4), and
- Gauging four A/B Zone wells installed by others (DC-1, DC-3, DC-4, and DC-5) and sampling one of those wells (DC-3).

Former Active RV

- Gauging and sampling 10 A or B Zone wells (MW-1A-RV, MW-1B-RV, MW-2A-RV, MW-2B-RV, MW-3A-RV, MW-3B-RV, MW-4A-RV, MW-4B-RV, MW-5A-RV, and MW-5B-RV).

Former Texaco Site

- Gauging and sampling 11 A or B Zone wells (MW-1, MW-4, MW-7, MW-8, MW-8B, MW-9, MW-9B, MW-10, MW-13, MW-13B, and MW-15), and
- Gauging and sampling three C wells (MW-8C, MW-9C, and MW-13C).

The groundwater monitoring well locations are shown on Figure 2. Wells R-MW-6, R-MW-10B, R-MW-11, R-MW-12, and R-MW-15 located along the western levee of Dominguez Channel or within Recreation Road were not sampled during this semi-annual event due to the presence of LNAPL in the wells (see discussion below). With the closure of Case No. R-05994 for the former Texaco site, onsite Texaco Wells MW-11, MW-12, MW-14, and MW-16 and offsite Texaco Wells MW-3, MW-5, and MW-6 were destroyed on February 25 and 26, 2015 with the LARWQCB's concurrence (AECOM, 2015). In addition, with the LARWQCB's concurrence via email on April 15, 2016, some A, A/B, and C Zone wells were eliminated from the monitoring program due to low or non-detect stable concentrations that were not needed to provide plume delineation (Dominguez Channel Wells R-MW-4, R-MW-13A, R-MW-14A, DC-1, DC-4, and DC-5, and former Texaco Wells MW-2, MW-8C, and MW-9C).

Wells R-MW-7A, R-MW-8A, and MW-16A located along the western levee of Dominguez Channel, Well R-MW-10A located on Recreation Road, Wells R-MW-13A and R-MW-14A located northeast of Dominguez Channel within Ashmill and Cloverbrook Streets, respectively, Wells MW-1A-RV through MW-5A-RV located at the former Active RV site, and Wells MW-1, MW-2, MW-4, MW-7, MW-8, MW-9, MW-10, MW-13, and MW-15 at the former Texaco site are screened within the upper water-bearing A Zone, which primarily consists of clays and silts with trace amounts of fine-

grained sand from the surface to approximately 35 feet below ground surface (bgs). Wells R-MW-1B, R-MW-6B, R-MW-7B, R-MW-8B, R-MW-9B, and MW-16B near the channel, Well R-MW-10B on Recreation Road, Wells R-MW-13B and R-MW-14B within Ashmill and Cloverbrook Streets, respectively, Wells MW-1B-RV through MW-5B-RV located at the former Active RV site, and Wells MW-8B, MW-9B, and MW-13B at the former Texaco site are screened in the deeper water-bearing B Zone, which primarily consists of silty fine sands and silts with some interbedded clay lenses from roughly 35 to 50 feet bgs. Wells R-MW-1 through R-MW-6, R-MW-11, R-MW-12, R-MW-15, DC-1, DC-3, DC-4, and DC-5 at Dominguez Channel are cross-screened between the A and B Zones. Wells R-MW-1C, R-MW-6C, and R-MW-10C at or near Dominguez Channel, and Wells MW-8C, MW-9C, and MW-13C at the former Texaco site are screened within the deeper C Zone, which consists of silty sands from approximately 70 to 80 feet bgs. The screened intervals for the wells are included in Table 1.

The groundwater purging and sampling were conducted by Blaine Tech Services, Inc. (Blaine Tech) of Carson, California, under the oversight of AECOM field personnel. A description of the monitoring methods is presented below.

Groundwater Gauging

On April 20, 2020, prior to purging and sampling, the depth to groundwater in each well relative to the top of casing (TOC) was measured to the nearest 0.01 foot using an electronic water level indicator. An oil-water interface probe was used to measure depth to groundwater in monitoring wells that have historically had LNAPL. Wells R-MW-11 and R-MW-12 contain active skimmers, Well R-MW-6 contains a passive skimmer, and Wells R-MW-10B and R-MW-15 contain a product sock. Product was measured in these wells during this monitoring event. The depth from the monitoring well TOC to the bottom of most of the wells was also measured and recorded to calculate the volume of the water column in the well. Groundwater elevations were calculated by subtracting the water table depth from the top of casing elevation. The depths to water and groundwater elevations are summarized in Table 1.

LNAPL Removal

In August 2011, LNAPL collection was initiated in groundwater monitoring Well R-MW-6 located along the western levee road. Initially, the product was removed weekly by hand bailing. On October 21, 2011, a passive skimmer was installed in Well R-MW-6 and daily LNAPL recovery from the well commenced on October 24, 2011. Due to continued LNAPL detections in Well R-MW-6, URS installed an active LNAPL recovery skimmer system on August 31, 2012. Due to declining product recoveries, the active skimmer was removed from R-MW-6 and replaced with a passive skimmer between March 9 and 17, 2015. Product sheen was detected in Well R-MW-6 during this monitoring event. Since September 15, 2011, approximately 688 gallons (as of June 24, 2020) of LNAPL have been removed from Well R-MW-6.

In July 2014, LNAPL recovery Well R-MW-11 was installed along the western levee road (URS, 2014). Initially, product was removed by bailing, then with a passive skimmer. On October 17, 2014, an active skimmer was installed in Well R-MW-11. A product thickness of 0.02 feet was observed in Well R-MW-11 during this monitoring event. Since July 23, 2014, approximately 374 gallons (as of June 24, 2020) of LNAPL have been removed from Well R-MW-11. In December 2014, LNAPL recovery Well R-MW-12 was installed roughly mid-way between Wells R-MW-6 and R-MW-11 (URS, 2015). Initially, a passive skimmer was used to remove product from the well, then the active skimmer from Well R-MW-6 was installed in Well R-MW-12 in March 2015. A product thickness of 0.07 feet was observed in Well R-MW-12 during this monitoring event. Through June

24, 2020, approximately 1,097 gallons of LNAPL have been removed from Well R-MW-12.

In February 2016, LNAPL recovery Well R-MW-15 was installed approximately 20 feet south of Well R-MW-6C. A passive skimmer was initially installed in this well on March 2, 2016, then an active skimmer was installed between August 2 and 12, 2016. On April 25, 2018, a passive skimmer was reinstalled in the well. In May 2019, the passive skimmer was removed, and a product sock was installed. Product sheen was detected in Well R-MW-15 during this monitoring event. Through June 24, 2020, approximately 199 gallons of product have been recovered from Well R-MW-15.

Measurable LNAPL was detected for the first time in Well R-MW-10B during the 2015 second semi-annual groundwater monitoring event. An absorbent sock was first installed in the well on February 3, 2016. The socks that are placed in the well are checked periodically and replaced as necessary. Product sheen was detected in Well R-MW-10B during this monitoring event.

In addition, product socks were installed in Wells R-MW-1B and MW-2A-RV in May 2013 to absorb the LNAPL sheen present in the two wells. The socks were checked periodically and replaced as necessary, until they were removed in January 2014. Product socks were installed in Wells MW-1A-RV and MW-2A-RV in June 2014 to absorb the LNAPL sheen present in the two wells. The socks are checked periodically and replaced as necessary. Sheen was not observed in these wells during this monitoring event.

Purging and Sampling Methods

After gauging, post-purge groundwater samples were collected from the wells for laboratory analysis. The wells were purged and sampled with a Grundfos® submersible well pump using low-flow/low-stress procedures (U.S. Environmental Protection Agency [USEPA]/540/S-95/504, April 1996) to minimize the impact of the purging process on groundwater chemistry during sample collection, and to minimize the volume of water purged and disposed. Purge rates of approximately 100 to 200 milliliters per minute (ml/min) were utilized.

Water quality indicator parameters were used to determine purging needs prior to sample collection in each well. The goal was to minimize drawdown where possible (less than 0.33 feet), with frequent monitoring of water quality parameters. Particular care was taken to insert the pump at the desired interval in the well screen with minimal disturbance to the water in the well casing. Water purged from each well was monitored for various field parameters including temperature, pH, turbidity, electrical conductivity, dissolved oxygen (DO), and oxidation reduction potential (ORP) using a YSI™ multi-parameter meter equipped with a flow-through cell. Purging continued until temperature, pH, and conductivity had stabilized. Measured field parameters are listed in Table 1. Copies of the groundwater purge logs are provided in Attachment A.

Groundwater samples were collected from 44 monitoring wells between April 20 through 23, 2020 for laboratory analysis. Due to the presence of LNAPL, active or passive skimmers are located in Wells R-MW-6, R-MW-11, and R-MW-12, and absorbent socks are located in Wells R-MW-10B and R-MW-15; therefore, samples were not collected from these five wells. Groundwater samples were collected from the discharge tubing of the well pump following well purging. The submersible well pump was cleaned prior to use and between wells by washing in a solution of Liquinox, rinsing with tap water, final rinsing with deionized water, and air drying. New, disposable, polyethylene discharge tubing was attached to the pump following each decontamination procedure and was changed between each well. Duplicate samples were collected from Wells R-MW-1, R-MW-6B, R-MW-8B, R-MW-10C, MW-1B-RV, MW-1, and MW-8, and labeled DUP-1-DC, DUP-2-DC, DUP-3-DC, DUP-4-DC, DUP-1-RV, Dup-1-TEX, and Dup-2-TEX, respectively. Six equipment blanks were collected by pumping deionized water through the utilized pumps and clean, disposable,

polyethylene tubing into sample containers following decontamination procedures. Eleven trip blank samples were included in ice chests during sample collection and transport. The equipment and trip blanks were placed on hold pending the results of the field samples.

Sample containers and handling procedures conformed to the established protocols for each specific parameter as described in USEPA SW-846. The sample bottles, once filled and preserved as required, were labeled with the following: well identification number, sample number, date and time sampled, job number, site/client name and location, and sampling personnel's initials. The labeled samples were logged on a chain-of-custody (COC) document, placed in an ice chest containing ice, and transported to Eurofins Calscience Irvine, Inc. (Eurofins) of Irvine, California, for analysis. Eurofins is accredited by California's Environmental Laboratory Accreditation Program (ELAP). The temperatures of the ice chests were recorded by the laboratory upon sample receipt and were within acceptable range. COC documents were maintained throughout the sampling program. Copies of the COC documents are included in Attachment B with the laboratory reports.

Laboratory Analysis Program

Forty-four primary groundwater samples and seven field duplicate groundwater samples were analyzed for the following:

- Total petroleum hydrocarbons (TPH) in the gasoline range (TPHg), TPH as diesel (TPHd), and TPH as oil (TPHo) by USEPA Method 8015B, and
- Volatile organic compounds (VOCs), including fuel oxygenates methyl tert-butyl ether (MTBE), diisopropyl ether (DIPE), ethanol (EtOH), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), and tert-butyl alcohol (TBA) by USEPA Method 8260B.

GROUNDWATER MONITORING RESULTS

Groundwater Elevation and Contours

Groundwater depth and elevation data for this reporting period are presented in Table 1. Historical groundwater elevation data are included in Attachment C. As shown in Table 1:

- Measured depths to water in the A Zone wells (screened between approximately 4 and 35 feet bgs) ranged from 4.61 (MW-2) to 16.93 (R-MW-16A) feet below top of casing (btoc). Groundwater elevations for the A Zone wells ranged from 3.06 (R-MW-16A) to 14.33 (MW-4) feet above mean sea level (msl). Between the 2019 second semi-annual groundwater monitoring event and the current reporting period, A Zone groundwater elevations decreased an average of 2.65 feet for the Dominguez Channel wells, increased an average of 0.15 feet for the former Active RV wells, and decreased an average of 1.31 feet for the former Texaco wells.
- Measured depths to water in the B Zone wells (screened between approximately 30 and 60 feet bgs) ranged from 12.25 (MW-8B) to 17.70 (MW-5B-RV) feet btoc. Groundwater elevations for the B Zone wells ranged from 3.24 (R-MW-10B) to 5.56 (MW-8B) feet msl. Between the 2019 second semi-annual groundwater monitoring event and the current reporting period, B Zone groundwater elevations decreased an average of 1.99, 0.78, and 1.74 feet for the Dominguez Channel, former Active RV, and former Texaco site wells, respectively.
- Measured depths to water in the C Zone wells (screened between approximately 70 and 80 feet bgs) ranged from 15.32 (R-MW-10C) to 19.53 (MW-8C) feet btoc. Groundwater

elevations for the C Zone wells ranged from -1.64 (MW-8C) to 1.75 (R-MW-10C) feet msl. Between the 2019 second semi-annual groundwater monitoring event and the current reporting period, C Zone groundwater elevations decreased an average of 1.94 and 1.25 feet for the Dominguez Channel and former Texaco site wells, respectively.

Wells that were screened across both A and B Zones (e.g., R-MW-1 and DC-1) were not included in the above summaries.

Interpretive groundwater elevation contour maps for all three groundwater zones (A, B, and C) were prepared using both kriging and polynomial regression with SURFER™, a graphical contouring software program. Both the kriging and polynomial regression methods provide a statistical interpolation of data points to generate elevation contours. Kriging provides a more precise extrapolation of the data points and is useful for interpreting local groundwater flow patterns. By contrast, polynomial regression processes the data so that underlying large-scale trends and patterns are shown; which is used for trend surface analysis.

In addition to the Dominguez Channel, former Active RV site, and former Texaco site wells, groundwater elevation data for the nearby Shell Pipeline site north of East Carson Street have been used to assist in preparation of the groundwater elevation contour maps.

The groundwater elevation contour maps are presented as Figures 3A and 3B for the A Zone, Figures 3C and 3D for the B Zone, and Figures 3E and 3F for the C Zone. The resultant groundwater contours based on polynomial regression indicate a southwest groundwater flow direction with a gradient of about 0.02 foot/foot (ft/ft) for the A Zone (Figures 3A and 3B), a south-southwest groundwater flow direction with a gradient of about 0.005 ft/ft for the B Zone (Figures 3C and 3D), and a northwest groundwater flow direction with a gradient of about 0.002 ft/ft for the C Zone (Figures 3E and 3F).

Groundwater Analytical Results

Chemical analytical results for this reporting period are presented in Table 2. Historical analytical results are included in Attachment C. For duplicate samples, the maximum concentration detected in either the primary or duplicate sample has been used to represent the presence of the analyte in the sample.

In summary, TPHg and/or VOCs were detected above laboratory reporting limits in 37 of the 38 wells sampled. Well R-MW-5 had no detections above the laboratory reporting limits. A summary of detections for TPHg, benzene, MTBE, TBA, and DIPE in wells at Dominguez Channel, the former Active RV site, and the former Texaco site is provided in the table below.

Detected Compound	Number of Detections	Minimum Detection (µg/L)	Maximum Detection (µg/L)	Well with Maximum Concentration
Dominguez Channel				
TPHg	17	36 J	34,000	R-MW-1B
Benzene	17	0.26 J	7,800	R-MW-1B
MTBE	3	0.45 J	1.1	DC-3
TBA	9	8.9 J	1,800	R-MW-6B
DIPE	17	0.25 J	640	R-MW-1C

Detected Compound	Number of Detections	Minimum Detection (µg/L)	Maximum Detection (µg/L)	Well with Maximum Concentration
Former Active RV Site				
TPHg	10	1,600	54,000	MW-2A-RV
Benzene	9	120	14,000	MW-1A-RV
MTBE	0	< 2.5	<25	--
TBA	5	91	700	MW-2B-RV
DIPE	10	3.5	1,400	MW-1B-RV
Former Texaco Site				
TPHg	14	43 J	21,000	MW-1
Benzene	11	0.36J	5,100	MW-1
MTBE	2	0.68	2.7	MW-13
TBA	5	5.9 J	340	MW-13B
DIPE	12	0.35 J	1,600	MW-9B

µg/L – micrograms per liter
<1.0 – Not detected above the laboratory reporting limit.
J – Reported value is below the laboratory reporting limit, but above the method detection limit; result is estimated.

Copies of the laboratory reports are included in Attachment B. Based on results of the analyses, isoconcentration contour maps for dissolved-phase TPHg, benzene, and DIPE in groundwater are provided as Figures 4A/4B, 5A/5B, and 6A/6B for the A and B Zones, respectively. In addition to the Dominguez Channel, former Active RV, and former Texaco site wells, groundwater concentration data for the nearby Shell Pipeline site have been included to assist in preparation of the isoconcentration contour maps. Historical analytical results for the CAH wells associated with the Shell Pipeline site are presented in Attachment C. TPHg, benzene, and DIPE hydrographs are provided in Attachment D.

AECOM conducted a check of data completeness for the analytical laboratory results for the groundwater samples collected. All samples were analyzed as requested and all holding times were met. Due to matrix interference, the result for benzene for one sample was qualified as estimated ("J"). No other data were qualified. Overall, based on this limited validation, the data as qualified are useable for their intended purpose. A copy of AECOM's data validation memorandum is included as Attachment E.

WASTE MANAGEMENT

Liquid wastes (decontamination water and well purge water) were collected and stored in three 55-gallon Department of Transportation (DOT)-approved drums, which were labeled to identify the source of the waste. The drums were stored onsite in a designated area pending lawful disposal.

FUTURE PLANNED ACTIVITIES

Groundwater monitoring will continue on a semi-annual basis and will be next performed during the fourth quarter of 2020. An updated site conceptual model report will be prepared.

CONCLUSIONS

- A southwest groundwater flow direction with a gradient of 0.02 ft/ft in the A zone; a south-southwest groundwater flow direction with a gradient of 0.005 ft/ft in the B zone; and a northwest groundwater flow direction with a gradient of about 0.002 ft/ft for the C zone are consistent with recent monitoring events.
- LNAPL was observed in Wells R-MW-6, R-MW-10B, R-MW-11, R-MW-12, and R-MW-15 in April 2020. This is consistent with previous groundwater monitoring events. LNAPL removal activities are conducted regularly using active skimmers (R-MW-11 and R-MW-12), a passive skimmer (R-MW-6), and absorbent socks (R-MW-10B and R-MW-15).
- The highest Project Area TPHg concentration (54,000 µg/L) was detected in former Active RV Well MW-2A-RV.
- The highest Project Area benzene concentration (14,000 µg/L) was detected in former Active RV Well MW-1A-RV.
- The highest Project Area DIPE concentration (1,600 µg/L) was detected in former Texaco Well MW-9B.
- As shown in the time series graphs included in Attachment D, TPHg, benzene, and DIPE concentrations in existing monitoring wells generally appear to be stable or decreasing, with a few instances of fluctuation. Groundwater elevations have generally been increasing over time.

STATEMENT OF LIMITATIONS

The conclusions, if any, presented in this report are professional opinions based solely upon the data described in this report. They are intended exclusively for the purpose outlined herein and the site location and project indicated. This report is for the sole use and benefit of the Client. The scope of services performed in execution of this effort may not be appropriate to satisfy the needs of other users, and any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user. No express or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed by the Client with the customary thoroughness and competence of professionals working in the same area on similar projects.

Notes:
1. "Post-purge" sample
2. Well was not gauged or sampled due to the presence of free product and an active \ passive skimmer in the well
3. Well not sampled due to free product/sheen in the well

Groundwater Elevation = Top of casing elevation - (Depth to Water - (0.8 * Standing Product Thickness))
-- = not analyzed/not measured/not sampled
btoc = below top of casing
MSL = mean sea level
bgs = below ground surface
mV = millivolts
°F = degrees Fahrenheit
°C = degrees Celsius
µS/cm = microSiemens per centimeter
NTU = nephelometric turbidity units
DO = dissolved oxygen
mg/L = milligrams per liter
ORP = oxidation reduction potential

PRELIMINARY REPORT

Dated as of August 4, 2020 at 7:30 a.m.

In response to the application for a policy of title insurance referenced herein, Commonwealth Land Title Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.
The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitation on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

The policy(s) of title insurance to be issued hereunder will be policy(s) of **Commonwealth Land Title Insurance Company.**

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered. It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

SCHEDULE A

The form of policy of title insurance contemplated by this report is:

ALTA Standard Owner's Policy of Title Insurance (6-17-06)

ALTA Extended Loan Policy of Title Insurance (6-17-06)

The estate or interest in the land hereinafter described or referred to covered by this report is:

A FEE

Title to said estate or interest at the date hereof is vested in:

RECREATION ROAD, LLC, a California limited liability company

The land referred to herein is situated in the County of Los Angeles, State of California, and is described as follows:

SEE EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF

EXHIBIT "A"

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

APN 7327-010-014; APN 7327-010-015

SCHEDULE B – Section A

The following exceptions will appear in policies when providing standard coverage as outlined below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

2. Any facts, rights, interests or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the Public Records.

6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

SCHEDULE B – Section B

At the date hereof Exceptions to coverage in addition to the printed exceptions and exclusions in said policy form would be as follows:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2020-2021.

B. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:

Purpose:	Pipelines
Recording Date:	September 23, 1930
Recording No:	Book 10027, Page 310 of Official Records
Affects:	A portion of said land as more particularly described in said document

3. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:

Purpose:	Pipelines and water distribution system
Recording Date:	November 09, 1922
Recording No:	Book 1515, Page 265 of Official Records
Affects:	A portion of said land as more particularly described in said document

4. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:

Purpose:	Pole lines
Recording Date:	June 07, 1962
Recording No:	6424, in Book D1640, Page 796 of Official Records
Affects:	A portion of said land as more particularly described in said document

5. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:

Purpose:	Public road and highway
Recording Date:	December 19, 1967
Recording No:	2944 of Official Records
Affects:	A portion of said land as more particularly described in said document

6. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

Redevelopment Agency:	Redevelopment Agency of the City of Carson
Recording Date:	December 23, 1971
Recording No:	2747, in Book M3933, Page 436 of Official Records
and Recording Date:	October 29, 2007
and Recording No:	20072435437 of Official Records
and Recording Date:	October 29, 2007
and Recording No:	20072435438 of Official Records
and Recording Date:	October 29, 2007
and Recording No:	20072435439 of Official Records
and Recording Date:	October 29, 2007
and Recording No:	20072435440 of Official Records

7. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:

Purpose:	Public street or highway
Recording Date:	November 04, 1975
Recording No:	3450 of Official Records
Affects:	A portion of said land as more particularly described in said document

8. An instrument entitled “Covenant and Environmental Restriction on Property”

Recording Date:	August 05, 2015
Recording No:	20150955134 of Official Records

Reference is hereby made to said document for full particulars.

9. Matters contained in that certain document

Entitled:	Grant Deed of Restrictive Covenants
Recording Date:	November 20, 2015
Recording No:	20151459779 of Official Records

Reference is hereby made to said document for full particulars.

10. Matters contained in that certain document

Entitled:	Access Agreement
Recording Date:	November 20, 2015
Recording No:	20151459780 of Official Records

Reference is hereby made to said document for full particulars.

11. A deed of trust to secure an indebtedness in the amount shown below,

Amount:	$3,220,000.00
Dated:	March 19, 2019
Trustor/Grantor:	Recreation Road, LLC, a California limited liability company
Trustee:	Chicago Title Company, a California corporation
Beneficiary:	Hyundai Capital America, a California corporation
Recording Date:	March 21, 2019
Recording No:	20190252070 of Official Records

A document entitled "Amended and Restated Cross-Default and Cross-Collateralization Agreement" recorded April 04, 2019 as Instrument No. 20190295773 of Official Records.

A document entitled "Amended and Restated Cross-Default and Cross-Collateralization Agreement" recorded September 27, 2019 as Instrument No. 20191017318 of Official Records.

An agreement to modify the terms and provisions of said deed of trust as therein provided

Recording Date:	October 02, 2019
Recording No:	20191038421 of Official Records

12. A financing statement as follows:

Debtor:	Recreation Road, LLC
Secured Party:	Hyundai Capital America
Recording Date:	March 21, 2019
Recording No:	20190252071 of Official Records

13. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

14. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

15. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

END OF SCHEDULE B EXCEPTIONS

PLEASE REFER TO THE "NOTES AND REQUIREMENTS SECTION" WHICH FOLLOWS FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION

REQUIREMENTS SECTION:

1. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: Recreation Road, LLC, a California limited liability company

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

2. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

INFORMATIONAL NOTES SECTION

1. The information on the attached plat is provided for your convenience as a guide to the general location of the subject property. The accuracy of this plat is not guaranteed, nor is it a part of any policy, report or guarantee to which it may be attached.

2. For wiring Instructions please contact your Title Officer or Title Company Escrow officer.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

6. Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	7327-010-014
Fiscal Year:	2019-2020
1st Installment:	$26,215.17
2nd Installment:	$26,215.15
Exemption:	$0.00
Code Area:	01183

   Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	7327-010-015
Fiscal Year:	2019-2020
1st Installment:	$4,606.59
2nd Installment:	$4,606.57
Exemption:	$0.00
Code Area:	01246

7. None of the items shown in this report will cause the Company to decline to attach ALTA Endorsement Form 9 to an Extended Coverage Loan Policy, when issued.

8. There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

Available Discounts

DISASTER LOANS (CTIC, CLTIC, FNTIC)

The charge for a Lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within twenty-four (24) months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be fifty percent (50%) of the appropriate title insurance rate.

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC, FNTIC)

On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be fifty percent (50%) to seventy percent (70%) of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be forty (40%) to fifty percent (50%) of the appropriate title insurance rate, depending on the type of coverage selected.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice. We may use comments or feedback that you submit to us in any manner without notice or compensation to you.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 09174014-917-JW7-EGL for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 09174014-917-JW7-EGL for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Commonwealth Land Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records.

5. The Land is currently in use as _____ ; _____occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

8. There are no material violations of any current, enforceable covenant affecting the Property and the Undersigned has received no written notice from any third party claiming that there is a present violation of any current, enforceable covenant affecting the Property.

This declaration is made with the intention that Commonwealth Land Title Company and Commonwealth Land Title Insurance Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on ___ at _____.

COVENANT AND ENVIRONMENTAL RESTRICTION ON PROPERTY

CARSON AIR HARBOR
ASSESSOR'S PARCEL NUMBER (APN): 7327-010-014 AND 7327-010-015
21611 SOUTH PERRY STREET, CARSON, CALIFORNIA
LARWQCB SITE CLEANUP PROGRAM NO 0490C

This Covenant and Environmental Restriction on Property ("Covenant") is made as of the 8th day of July, 2015 by Triton Diagnostics Inc. ("Covenantor") who is the Owner of record of that certain property identified as APN 7327-010-014 and 7327-010-015 and situated at 21611 South Perry Street, in the City of Carson, County of Los Angeles, State of California, which is more particularly described in Exhibits A and B attached hereto and incorporated herein by this reference (hereinafter referred to as the "Burdened Property"), for the benefit of the California Regional Water Quality Control Board, Los Angeles Region ("Board"), with reference to the following facts:

A. Nature of Covenant. This Covenant is an environmental covenant provided for by Civil Code section 1471 and required by the Board pursuant to Water Code section 13304 because the Board has determined that the Burdened Property is not suitable for unrestricted use and that a land use restriction is necessary for the protection of present or future human health, safety, or the environment as result of the presence of hazardous materials, as defined in section 25260 of the Health and Safety Code, in the soil and/or groundwater at the Burdened Property.

B. Contamination of the Burdened Property. The soil at the Burdened Property is contaminated by releases from offsite pipelines and a converted septic tank onsite, which was used by a former owner and/or operator during the 1960s and 1970s as an underground storage tank (UST) for waste oil. The known contamination originally consisted of petroleum hydrocarbons which constitute hazardous materials. By means of excavation, the known contamination in soil has been reduced to levels protective of commercial/industrial workers. Groundwater beneath the Burdened Property is also contaminated with petroleum hydrocarbons from onsite and offsite sources. Groundwater impacts are being addressed separately and do not affect the development and use restrictions included in this Covenant. Potential migration of

contamination in soil and groundwater into indoor air will be addressed through the required construction of engineered controls, such as a vapor barrier beneath any building constructed onsite.

C. Exposure Pathways. The contaminants addressed in this Covenant are present in the soil at the Burdened Property. Without the mitigation measures which have been performed on the Burdened Property, exposure to these contaminants could take place via in-place contact, resulting in dermal contact, inhalation, or ingestion by humans, etc. The risk of public exposure to the contaminants has been substantially lessened by the remediation described herein. With the Board-approved Soil Management Plan (included in Exhibit C) and use restrictions for the Burdened Property in place, exposure to contaminants in deeper soil and potentially groundwater is largely mitigated. Potential exposure during excavation for utilities would be mitigated by the implementation of the Soil Management Plan.

D. Land Uses and Population Potentially Affected. The Burdened Property is currently vacant, but will be used for commercial or industrial purposes and is adjacent to residential and commercial land uses.

E. Disclosure and Sampling. Disclosure of the presence of hazardous materials on the Burdened Property has been made to the Board and extensive sampling of the Burdened Property has been conducted.

F. Use of Burdened Property. Covenantor desires and intends that in order to benefit the Board, and to protect present and future human health, safety, or the environment, the Burdened Property shall be used in a manner consistent with this Covenant as to avoid potential harm to persons or property that might result from any hazardous materials that might remain deposited on portions of the Burdened Property.

ARTICLE I
GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Burdened Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. These Restrictions are reasonably necessary to protect present and future human health or safety or the environment as a result of the presence of hazardous materials at the Burdened Property. Each and all of the Restrictions shall run with the land and pass with each and every portion of the Burdened Property, and shall apply to, inure to the benefit of, and bind the respective successors, assigns, and lessees thereof for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions: (a) are imposed upon the entire Burdened Property, unless expressly stated as applicable to a specific portion of the Burdened Property; (b) run with the land pursuant to Civil Code section 1471; and (c) are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. After the date of recordation hereof, all purchasers, lessees, and possessors of all or any portion of the Burdened Property shall become

Owners or Occupants as defined herein and shall be deemed by their purchase, leasing, or possession of the Burdened Property to be bound by the Restrictions and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions herein established must be adhered to for the benefit of the Board and all Owners and Occupants, and that the interest of all Owners and Occupants of the Burdened Property shall be subject to the Restrictions.

1.3 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions shall be deemed incorporated in each and all deeds and leases of all or any portion of the Burdened Property by the recording of this Covenant. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant has been attached to or incorporated into any given deed or lease.

1.4 Purpose. It is the purpose of this instrument to convey to the Board access rights as specified in this Covenant, which will run with the land, to facilitate the remediation of past environmental contamination and to protect present and future human health, safety, or the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II
DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board, Los Angeles Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, structures, roads, driveways, gradings, re-gradings, and paved areas, constructed or placed upon any portion of the Burdened Property.

2.3 Occupant or Occupants. "Occupant" or "Occupants" shall mean Owners and those persons entitled by ownership, leasehold, or other legal relationship to the right to use and/or occupy all or any portion of the Burdened Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and Covenantor's successors in interest who hold title to all or any portion of the Burdened Property.

ARTICLE III
DEVELOPMENT, USE, AND CONVEYANCE OF THE BURDENED PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Burdened Property as follows:

a. Development and use of the Burdened Property shall be restricted to industrial, commercial, and/or office space uses;

b. No residence for human habitation shall be permitted on the Burdened Property;

c. No hospitals shall be permitted on the Burdened Property;

d. No public or private schools for persons under 21 years of age shall be permitted on the Burdened Property;

e. No care or community centers for children or senior citizens, parks, playgrounds, or other uses that would involve the regular congregation of children or senior citizens, shall be authorized on the Burdened Property;

f. All excavation work will be conducted per the Board-approved Soil Management Plan. No basement, underground parking, or subsurface storage space will be constructed on the Burdened Property; excavation of the subsurface for the development or construction of these facilities is strictly prohibited. Any contaminated soils brought to the surface by grading, excavation, trenching, or backfilling shall be managed by the Owner, Owner's agent, Occupant, or Occupant's agent in accordance with all applicable provisions of local, state and federal law;

g. Any penetrations deeper than 15 feet below ground surface will be backfilled from the bottom of the penetration up with a bentonite or cement-bentonite grout to minimize the potential for shallow impacts migrating to deeper zones. The cement-bentonite mix will contain roughly 5 percent bentonite by weight or as required by the permitting agency, as applicable.

h. Any excavation deeper than one (1) foot that is conducted on the Burdened Property shall be performed pursuant to an appropriate and fully implemented Health and Safety Plan in accordance with Title 29 Code of Federal Regulations, Section 1910.120 and as required by the California Occupational Safety and Health Administration;

i. No underground storage tanks will be installed on the Burdened Property;

j. The Burdened Property shall not be used for agricultural purposes. Landscaping of the Burdened Property in connection with redevelopment in accordance with the regulatory requirements of the City of Carson is permitted, but groundwater associated with the Burdened Property shall not be used for such landscaping;

k. Any construction at the Burdened Property shall comply with all regulatory requirements, including but not limited to all requirements relating to indoor air quality and the potential for vapor intrusion. Further, the Owner shall apply engineered controls to any building or structure that is constructed on the Burdened Property that has indoor air in order to mitigate the risk of vapor intrusion from the subsurface (i.e., a vapor barrier);

l. No Owner or Occupant shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, irrigation, or industrial uses, unless expressly permitted in writing by the Board; nor shall the Owner or Occupant permit or engage any third party to do such acts;

m. The Owner and/or Occupant shall notify the Board of each of the following: (1) the type, cause, location and date of any disturbance to any remedial measures taken or remedial

equipment installed, and of the groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, which could affect the ability of such remedial measures, remedial equipment, or monitoring system to perform their respective functions, and (2) the type and date of repair of such disturbance. Notifications to the Board shall be made by registered mail within ten (10) working days of both the date of discovery of such disturbance and the date of completion of repairs;

j. The Covenantor agrees that the Board, and any persons acting pursuant to Board orders, shall have reasonable access to the Burdened Property for the purposes of inspection, surveillance, maintenance, or monitoring as provided in Division 7 of the Water Code after providing reasonable prior written notice to the then current Owner; and

k. No Owner or Occupant shall act in any manner that threatens or is likely to aggravate or contribute to the existing contaminated conditions of the Burdened Property.

3.2 Enforcement. Nothing in this Covenant shall limit the Board's authority under Division 7 (commencing with section 13000) of the Water Code or other applicable laws.

3.3 Notice in Agreements. After the date of recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to all or any portion of the Burdened Property. Any such instrument shall contain the following statement:

> The land described herein contains hazardous materials in the soils and/or groundwater under the property, and is subject to a Covenant and Environmental Restriction on Property dated as of _____, 20___, and recorded on _____, 20___, in the Official Records of _____ County, California, as Document No. _____, which Covenant and Environmental Restriction on Property imposes certain covenants, conditions, and restrictions on usage of the property described herein. This statement is not a declaration that a hazard exists.

ARTICLE IV
VARIANCE, TERMINATION, AND TERM

4.1 Variance. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's written consent, any Occupant may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Burdened Property.

4.3 Term. Unless terminated in accordance with Paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

ARTICLE V
MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Burdened Property or any portion thereof to the general public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (a) when delivered, if personally delivered to the person being served or an official of a government agency being served, or (b) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested, and addressed:

If To: "Covenantor"	Shell Oil Company Attn: Post Closing Rights & Obligations, Environmental Claims One Shell Plaza 910 Louisiana – 29th Floor Houston, TX 77002
If To: "Board"	Regional Water Quality Control Board Los Angeles Region Attention: Executive Officer 320 W. 4th Street, Suite 200 Los Angeles, California 90013

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined by a court having jurisdiction to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included herein.

5.4 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of Los Angeles within ten (10) days of the date of execution.

5.5 References. All references to Code sections include successor provisions.

5.6 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to preserve and implement the purpose of this instrument and the policies and purposes of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision valid shall be favored over any interpretation that would render it invalid.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

EXHIBIT A

LEGAL DESCRIPTION OF THE BURDENED PROPERTY

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF LOT 15 OF TRACT NO. 4054, IN THE CITY OF CARSON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 44, PAGE 39 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE NORTHERLY LINE OF THE SOUTHERLY 20 FEET OF SAID LOT WITH A LINE PARALLEL WITH AND NORTHEASTERLY 27 FEET, MEASURED AT RIGHT ANGLES, FROM THE SOUTHWESTERLY LINE OF SAID LOT; THENCE ALONG SAID PARALLEL LINE NORTH 39° 21' 48" WEST 245.64 FEET; THENCE SOUTH 89° 22' 27" WEST 25.48 FEET; THENCE NORTH 39° 21' 48" WEST 2.11 FEET; THENCE NORTH 0° 37' 33" WEST 17.38 FEET TO A LINE PARALLEL WITH AND NORTHEASTERLY 18 FEET, MEASURED AT RIGHT ANGLES, FROM SAID SOUTHWESTERLY LINE; THENCE ALONG SAID LAST MENTIONED PARALLEL LINE NORTH 39° 21' 48" WEST TO THE SOUTHERLY LINE OF TRACT NO. 29360, AS PER MAP RECORDED IN BOOK 734, PAGE 45 OF MAPS; THENCE EASTERLY ALONG SAID SOUTHERLY LINE TO THE EASTERLY LINE OF SAID LOT 15; THENCE SOUTHERLY ALONG SAID EASTERLY LINE TO SAID NORTHERLY LINE; THENCE WESTERLY ALONG SAID NORTHERLY LINE TO THE POINT OF BEGINNING.

EXCEPT THEREFROM THAT PORTION OF SAID LAND DESIGNATED AS PARCELS 2-36 INCLUSIVE IN THE FINAL DECREE OF CONDEMNATION ENTERED IN SUPERIOR COURT, LOS ANGELES COUNTY, CASE NO. 909461, A CERTIFIED COPY OF WHICH WAS RECORDED AUGUST 26, 1969, AS INSTRUMENT NO. 2734, IN BOOK D-4478, PAGE 350, OFFICIAL RECORDS OF SAID COUNTY AND MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE EASTERLY LINE OF SAID LOT WITH THE NORTHERLY LINE OF THE SOUTHERLY 20 FEET OF SAID LOT; THENCE WESTERLY ALONG SAID NORTHERLY LINE 19.99 FEET TO THE BEGINNING OF A CURVE CONCAVE TO THE NORTHWEST, HAVING A RADIUS OF 15 FEET, TANGENT TO SAID NORTHERLY LINE AND TANGENT TO THE WESTERLY LINE OF THE EASTERLY 5 FEET OF SAID LOT; THENCE NORTHEASTERLY ALONG SAID CURVE 23.55 FEET TO SAID WESTERLY LINE; THENCE EASTERLY AT RIGHT ANGLES FROM SAID WESTERLY LINE 5 FEET TO SAID EASTERLY LINE; THENCE SOUTHERLY ALONG SAID EASTERLY LINE 14.99 FEET TO THE POINT OF BEGINNING.

ALSO EXCEPT 1/2 OF ALL OIL, GAS, HYDROCARBON AND MINERAL SUBSTANCES IN AND UNDER SAID LAND, BUT WITHOUT RIGHT OF SURFACE ENTRY, AS RESERVED BY MARY M. REGAN, IN DEED RECORDED OCTOBER 4, 1957, AS INSTRUMENT NO. 504, IN BOOK 44767, PAGE 300, OFFICIAL RECORDS.

SOIL MANAGEMENT PLAN
WITH
REGIONAL BOARD APPROVAL LETTER

CALIFORNIA
Water Boards

EDMUND G. BROWN JR.
GOVERNOR

MATTHEW RODRIQUEZ
SECRETARY FOR
ENVIRONMENTAL PROTECTION

Los Angeles Regional Water Quality Control Board

May 29, 2015

Mr. Joseph Lentini
Environmental Services
Shell Oil Products US
20945 S. Wilmington Ave.
Carson, CA 90810

SUBJECT: **APPROVAL OF SOIL MANAGEMENT PLAN**

SITE: **FORMER CARSON AIR HARBOR SITE**
21611 PERRY STREET, CARSON, CALIFORNIA (SCP NO. 0490C)

Dear Mr. Lentini:

The subject Site was occupied by several industrial/commercial tenants since the early 1960s, including Plan Hold Corporation; Picket Industries; Air Harbor Machine Company, Inc.; Focus Engineering Services; Aire RV and Sports Den; and Carson Trailer, Inc. The last tenant vacated the property in December 2009 and building demolition occurred in May 2011. All structures, walls, footings, foundations, and known subsurface features have been removed and the Site is currently vacant. The Site is owned by Shell Oil Products US (SOPUS). Environmental assessment at the Site has been performed under the oversight of the Regional Board Site Cleanup Program. Contaminants of concern include petroleum hydrocarbons sourced from a former septic system that was converted to a waste oil tank and from petroleum pipelines within Carson Street and Perry Avenue adjacent to the Site. On April 21, 2014, the Regional Board approved a soil excavation work plan for the Site. The approval was contingent upon a commercial/industrial land use deed covenant being recorded for the property prior to the issuance of any No Further Action (NFA) determination being made by the Regional Board.

Soil excavation has been performed, as documented in *Soil Excavation Report* (Report), dated December 15, 2014, prepared by URS Corporation. The Report requests a no further action letter for vadose zone soil. It also includes a *Soil Management Plan* as Appendix K in the Report. The soil management plan was prepared to facilitate sale of the property and the filing of the commercial/industrial land use deed covenant. This letter is intended as a response to the Soil Management Plan only; a decision regarding the vadose zone soil no further action request will be made by this Regional Board following the filing of the commercial/industrial land use deed covenant with the County of Los Angeles Registrar-Recorder/County Clerk.

The Soil Management Plan provides a brief outline of health and safety, air monitoring, boring backfill requirements, and soil profiling and disposal requirements which are intended to serve as a framework for how residual hydrocarbons in soil at the Site will be managed if soil excavation or boring work occurs in the future. The Regional Board concurs with the framework provided in the Soil Management Plan.

If you have any questions, please contact Greg Bishop, Engineering Geologist, at the Regional Board at (213) 576-6727 or via email at greg.bishop@waterboards.ca.gov.

Sincerely,

Greg Bishop, PG, CHg
Engineering Geologist

SOIL MANAGEMENT PLAN
CARSON AIR HARBOR

1.0 INTRODUCTION

URS Corporation (URS) prepared this soil management plan (SMP) at the request of Equilon Enterprises, LLC, doing business as Shell Oil Products US (SOPUS) for the former Carson Air Harbor facility located at 21611 South Perry Street in Carson, California (Site; Figure 1). The Site is located within Assessor's Parcel Numbers (APN) 7327010014 and 7327010015 and is part of an open California Regional Water Quality Control Board, Los Angeles Region (LARWQCB) case (Case No. 0490C).

This SMP is intended to provide a framework for how soil with residual hydrocarbons will be managed at this Site. This SMP will be documented in the deed covenant so that implementation of this plan will continue to be a requirement to future owners or developers of the property.

The landowner needs to conduct all activities disturbing or managing soil at the Site (e.g., excavation, grading, trenching, stockpiling, disposal, etc.) in accordance with city, county, state, and federal rules, laws, and regulations.

2.0 SITE CONDITIONS

2.1 SITE DESCRIPTION

The Site is located at 21611 South Perry Street in Carson, California (Figure 1). The Site is approximately 2.82 acres and is currently undeveloped (Figure 2). The Site is zoned light industrial, and was previously developed with a single industrial building. Future development of the property will be limited to industrial/commercial uses, based on a recorded deed restriction. This SMP applies to the entire site.

2.2 SITE HISTORY

Prior to development in the early 1960s, the Site was farm land. Since the early 1960s, tenants have included Plan Hold Corporation, Picket Industries, Air Harbor Machine Company, Inc., Focus Engineering Service, Aire RV and Sports Den, and Carson Trailer, Inc. The last tenant vacated the property in December 2009, and building demolition occurred in May 2011.

A septic tank was previously present at the Site adjacent to the southern boundary of the warehouse building. This tank was used by a former owner and/or operator during the 1960s-1970s as an underground storage tank (UST) for waste oil. The converted septic tank/UST was removed in May 1990 (Law Environmental, Inc., 1990).

Following removal of the converted septic tank/UST, soil samples were collected from the excavation pit under the supervision of the Los Angeles County Department of Public Works (LACDPW). Petroleum hydrocarbons were detected at concentrations exceeding the County's Pilot Program for Leaking Underground Storage Tanks. A subsequent investigation conducted by Conservtech in early 1991 concluded that contamination appeared to originate from multiple sources.

Since then additional investigations were conducted and on April 15, 2014, URS submitted a workplan to remove vadose zone soil above California Regional Water Quality Control Board,

San Francisco Bay Region (SFRWQCB) Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers from direct exposure to soils. The primary risk drivers were benzene and total petroleum hydrocarbons (TPH) in the gasoline range. The excavations were limited to a 5-foot depth in three of the four excavations and to an 8-foot depth in the fourth excavation. Groundwater is present at depths ranging from approximately 8 to 14 feet below ground surface (bgs) at the Site. This work was approved by the LARWQCB on April 21, 2014, and was implemented in September/October 2014. This SMP is included in the December 15, 2014 report documenting the soil excavation work and is a necessary condition for a vadose zone only no further action by the LARWQCB (URS, 2014).

3.0 SOIL MANAGEMENT

3.1 HEALTH AND SAFETY

Residual hydrocarbons are present in soil at the Site. Thus, standard health and safety precautions need to be followed for all soil management activities, including excavation, grading, trenching, etc. The landowner or their contractor needs to evaluate health and safety requirements for their employees and develop a Site-specific Health and Safety Plan for their use. Monitoring for worker safety may be necessary. The Health and Safety Plan needs to be prepared and implemented by a competent person and should refer to relevant provisions of this SMP.

3.2 AIR MONITORING (ODOR, DUST, AND VAPORS)

Vapors from soil excavations at a minimum will need to be managed as required by South Coast Air Quality Management District (SCAQMD) Rule 1166, odors will need to be addressed as required by SCAQMD Rule 402 nuisance provisions, and dust will need to be managed as required by SCAQMD Rule 403 dust monitoring requirements. Hydrocarbon odors from soil will need to be carefully managed to minimize nuisance impact to the general public and neighbors. The landowner will need to mitigate any odor generation during soil excavation and grading.

3.3 SPECIAL REQUIREMENTS FOR DEEPER PENETRATIONS

Any boring, such as cone penetrometer test (CPT) borings, needs to be backfilled from the bottom of the penetration up with a bentonite or cement-bentonite grout to minimize the potential for shallow impacts migrating to deeper zones. The cement-bentonite mix must contain roughly 5 percent bentonite by weight or as required by the permitting agency.

3.4 SOIL PROFILING AND DISPOSAL

Excavated soils that cannot be reused onsite and soil generated during any deeper excavations or penetrations will need to be `appropriately profiled, transported, and disposed of in accordance with all local, state, and federal rules, laws, and regulations.

SEE EXHIBIT "A" ATTACHED

WHEREAS, Purchaser purchased from Triton real property located in the City of Carson, County of Los Angeles, State of California, more particularly described in Exhibit A attached hereto ("Premises"), including all improvements located thereon, pursuant to the terms of a certain Purchase and Sale Agreement dated effective February 17, 2015, between Triton and Xebec Realty Partners, Inc., Purchaser's predecessor in interest, as amended the "Purchase and Sale Agreement"; capitalized terms used herein and not otherwise defined have the meanings set forth in the Purchase and Sale Agreement, and

WHEREAS, the Premises requires additional remedial activities by Triton or its affiliates, including but not limited to groundwater monitoring; and

WHEREAS, Purchaser was willing to purchase Triton's interest in the Premises with full knowledge of the potential for continued remedial activities by Triton.

NOW, THEREFORE, in exchange for the mutual promises and considerations stated herein the Parties agree as follows:

1. **GRANT OF LICENSE**. Purchaser hereby grants, on behalf of itself, its heirs, successors, and assigns, a nonexclusive, irrevocable license from the Effective Date to Triton, and its affiliates and their respective employees, authorized agents, and contractors, and any relevant governmental agency with jurisdiction ("Agency") and its

1 LD

employees, authorized agents, and contractors, who have prior to any such entry demonstrated in writing to Purchaser the authority from Triton to so enter in accordance with this Agreement (collectively, the "Permitted Entrants"), to enter onto those portions of the Premises reasonably necessary to perform certain monitoring and remedial activities, including but not limited to, all monitoring well and piping installations, relocations and closures, remediation systems installations (including installation of any utilities needed for such system), tests, inspections, borings, sampling, monitoring, engineering studies, surveys, appraisals, environmental studies, remediation operations or other activities related to open case(s) with the Los Angeles Regional Water Quality Control Board ("LARWQCB") as of the Effective Date hereof related to groundwater impacts at the Premises (hereinafter referred to as "Corrective Action") in order to comply with all applicable federal, state and local statutes, regulations, ordinances directives, orders and standards and required by the LARWQCB. Purchaser also grants Triton and its Permitted Entrants the right to occupy up to a total of three (3) parking spaces on the Premises, if Triton or its affiliates requires them for the Corrective Action, which spaces shall be designated by Purchaser. The grant of parking set forth in the preceding sentence shall not be required during periods of redevelopment, and repair, of the Premises when parking is not reasonably available. This Agreement is intended, and shall be construed only, as a temporary license to enter upon the Premises to conduct the Corrective Action and to occupy parking spaces and not a grant of easement or any other interest in the Premises. Purchaser shall, as soon as possible, but not later than thirty (30) days after damage or destruction caused by Purchaser, replace or repair, at its sole expense, such of the monitoring wells, monitoring well pads, remediation equipment or piping installed by Triton or its Permitted Entrants on the Premises required by the Corrective Action and damaged or destroyed by Purchaser, unless same are no longer in service for the Corrective Action. If no longer in service, then Triton or its Permitted Entrants shall promptly remove, plug, or abandon same at its sole cost and in accordance with all applicable federal, state and local statutes, regulations, ordinances and standards and all Environmental Laws (as defined in the Purchase and Sale Agreement).

2. ENVIRONMENTAL INVESTIGATION AND REMEDIATION. Triton, at its sole expense, agrees to conduct any necessary Corrective Action at the Premises in accordance with, and shall at all times comply with, all applicable federal, state and local statutes, regulations, ordinances and standards and all Environmental Laws; however, Purchaser agrees Triton is under no obligation to Purchaser to perform corrective or remedial action with respect to: (a) any environmental condition (i) caused or created on or about the Premises on and after the Effective Date, or (ii) if caused or created by Purchaser, and (b) any substance that in the past migrated or in the future migrates onto the Premises from property other than property owned by Triton at the time of migration, unless any such obligation arises as a part of the Corrective Action or arises in connection with the re-opening of the "Soils Only" No Further Action (as defined in the Purchase and Sale Agreement). Purchaser acknowledges and agrees that Triton shall perform the Corrective Action consistent only with commercial, industrial, or similar non-residential assessment or cleanup standards established by the Agency.

Notwithstanding the foregoing, in addition to any groundwater obligations that are Triton's responsibility as of the Effective Date, if the "Soils Only" No Further Action (as defined in the Purchase and Sale Agreement) is re-opened by the LARWQCB, or the Corrective Action is modified not as a result of Purchaser or its successor's acts or omissions, then Triton shall be solely responsible, at its cost, for completing all work so

required by the LARWQCB, and all other Agencies that may get involved, pursuant to the modified Corrective Action and the re-opened "Soils Only" No Further Action, including, without limitation, testing, inspections, borings, engineering studies, surveys, appraisals, environmental studies, remediation operations, reporting, installing new monitoring wells and piping, potentially installing a remediation system including any utilities needed for such system, relocating and closing existing monitoring wells and piping, and other related activities.

Except as set forth above, a landowner shall only be responsible for any costs related to soil or groundwater impacts, related to its acts or omissions, including any redevelopment activities on the Property and any dewatering activities at the Property, and not for the acts or omissions of any other landowner.

Triton or its affiliate, if applicable, shall be designated the generator of any and all waste produced related to Triton's Corrective Action activities on the Premises, and Triton shall be solely responsible for preparing and executing manifests for such waste, arranging for timely removal of such waste from the Premises, and shall bear all liability associated with such waste. Triton shall be solely responsible for all reporting requirements under any applicable laws and arising in any way from Triton's performance of the Corrective Action and if the "Soils Only" No Further Action is re-opened by the LARWQCB. Purchaser shall be listed as the "generator" in any manifest related to excavation undertaken by Purchaser or shallow soil impacts caused by Purchaser, except if Triton's "Soils Only" No Further Action is re-opened by the LARWQCB.

3. **REGULATIONS.** Except for the Corrective Action and in connection with any re-opening of the "Soils Only" No Further Action, which are Triton's sole responsibility, Purchaser hereby agrees to comply with all Environmental Laws, including but not limited to those requiring insurance, inventory records, leak detection devices, system inspections, tank and line tests and tank field monitoring well tests. Purchaser further agrees to provide Triton, at Purchaser's expense, within fifteen (15) days of the date request is made by Triton, with copies (with portable document or similar format made available by email or through the internet, being acceptable methods of delivery) of any records in Purchaser's possession required by applicable law to be kept with respect to any operations conducted on the Premises that may disturb or alter the existing condition of soil and/or groundwater on the Premises or pertaining to any violation of the above. Further, upon written request by Triton, Purchaser shall make available all records required by Environmental Laws to be made public for review by Triton, at its sole cost, at the Premises or at Purchaser's office during normal business hours. Purchaser also agrees to notify Triton promptly if Purchaser discovers any soil or groundwater containing "Hazardous Substance" or if Purchaser discovers any "Release" or "Environmental Condition" on any portion of the Premises, as those terms are defined under the Purchase and Sale Agreement, that Purchaser is obliged by applicable law to report to an Agency.

4. **CONSTRUCTION ON THE PREMISES.** Until Triton receives a no further action letter or its equivalent from the LARWQCB with respect to groundwater impacts at the Premises relating to the Corrective Action, Purchaser shall provide Triton and LARWQCB with written notification at least thirty (30) days in advance of the date on which Purchaser plans to begin excavation, grading, removal of soil from the Premises, trenching, filling, earth movement, mining, or disturbance of soils (including but not

limited to soils that are below shallow soils) at the Premises for development purposes ("Development").

Purchaser's written notification to Triton shall state the dates during which the Development work will be performed and shall contain detailed work plans, which may be changed from time to time;

4.1 During the thirty (30) day period following the notice from Purchaser, the Parties will coordinate and cooperate with each other in planning the simultaneous performance of the Development and activities at the Premises in such a manner as to minimize cost and time for each Party, including agreeing upon the scope and schedule of the removal activities and the schedule of the transporters and trucks needed for disposal. Purchaser shall not commence excavation activities on the Premises until the expiration of the thirty (30) day notice period;

Purchaser shall notify Triton no later than forty-eight (48) hours in advance of excavation of any soils undertaken by Purchaser at the Premises. For purposes of this sub-section, notification may be made by facsimile or electronic mail. Triton may collect, at its expense, representative soil samples for analysis of substances. Soil from such excavation with substances levels below the applicable State cleanup standard for commercial/industrial property use will be considered "clean." Soil from such excavation determined to be "clean" may be used by Purchaser for back-filling or other Development purposes at the Premises, subject to any restrictions in the deed from Triton to Purchaser and any applicable Agency requirements. Purchaser shall, at its cost and expense, remove and properly dispose of any such clean soil if Purchaser decides not to use such clean soil for back-filling or other Development purpose. Soil from such excavation with levels of substances above the applicable State cleanup standard for commercial/industrial property use will be considered "contaminated." If it is determined that such contaminated soil may not be used on the Premises, then Purchaser, at its sole cost and expense, shall segregate any such contaminated soil from clean soil and transport and properly dispose of any such contaminated soil at a permitted treatment, storage and disposal facility, or any other facility legally capable of accepting such soil. Further, Purchaser shall be listed as the "generator" in any manifest related to such excavation matters, except if Triton's "Soils Only" No Further Action is re-opened by the LARWQCB.

4.2 Triton shall be responsible for all costs and expenses associated with the disposal of contaminated groundwater (a) related to the Corrective Action or Triton's "Soils Only" No Further Action, if re-opened by the LARWQCB; and (b) caused by Triton's use and occupation of the Premises unless such costs and expenses would not have been incurred but for Purchaser's Development for which removal and special handling is required by applicable law. Purchaser shall notify Triton no later than forty-eight (48) hours in advance of the removal of any liquids taken by Purchaser from the groundwater at the Premises. For purposes of this sub-section, notification may be made by facsimile or electronic mail. Liquids with substances levels below the applicable State cleanup standard for commercial/industrial property use will be considered "clean." Except as set forth above, Purchaser shall, at its cost and expense, remove and properly dispose of any such clean liquids. Liquids from groundwater with levels of substances above the applicable State cleanup standard for commercial/industrial property use will be considered "contaminated." Purchaser shall, at its sole cost and expense, transport and properly dispose of any such contaminated liquids at a permitted treatment, storage and disposal facility, or any other facility legally capable of accepting such liquids.

Any Development activities by Purchaser shall be in compliance with all applicable Agency regulatory requirements. In the event one of the monitoring wells and relating piping at the Premises must be relocated as a result of Purchaser's Development and subject to approval from the LARWQCB and any Agency with jurisdiction and authority, Purchaser agrees to cooperate, at no cost or liability to Purchaser, with Triton and any Permitted Entrants in relocating such well(s) and related piping to such other part of the Premises mutually agreed to by Triton and Purchaser. All well relocation work will be done by Triton or Triton's contractor or agent, at Triton's instruction and at Triton's cost, and subject to Agency approval.

As between Triton and Purchaser, Purchaser shall be liable for and will perform or have performed, at Purchaser's sole expense, any corrective action required by an Agency by reason of violations of Environmental Laws, other than the Corrective Action and except if Triton's "Soils Only" No Further Action is re-opened by the LARWQCB, with respect to (a) any environmental condition caused or created by Purchaser; (b) any environmental condition caused or created on or about the Premises on and after the Effective Date; and (c) any new contributions to soil and groundwater impacts on and after the Effective Date that are above the baseline created by reports on record with the LARWQCB as of the Effective Date.

Failure of Purchaser to give Triton notice of Development activities as required herein and within thirty (30) days after Development activities have commenced shall relieve Triton from any responsibility or liability to Purchaser for any costs, expenses or consequential damages that may result from Purchaser undertaking such Development activities. For purposes of this section, all notifications shall be made to Shell Oil Company's soil and groundwater project manager related to the Property, which as of the Effective Date of this Agreement is Joe Lentini, Principal Program Manager, Soil and Groundwater Focused Delivery Group, Shell Oil Company, at (310) 376-0649, Joseph.Lentini@shell.com. Triton shall provide written notice to landowner of any change in this contact.

4.3 All amounts payable by Triton to Purchaser shall be paid to Purchaser within twenty (20) business days following demand. To be effective, Purchaser's demand shall include copies of invoices and proof of payment for which payment is required.

5. TERMINATION. Upon completion of its Corrective Action at the Premises, this Agreement shall terminate and Triton shall have no further obligation or responsibility to perform Corrective Action at the Premises. Purchaser agrees that Triton will have "completed" its Corrective Action upon a determination by the Agency in writing that no further action is required with respect to the Corrective Action.

6. MUTUAL COOPERATION. Triton agrees to coordinate its activities with Purchaser to minimize any inconvenience to or interruption of the conduct of Purchaser's business or development of the Premises including, but not limited to, providing reasonable notice prior to all activities which Triton believes may interrupt the conduct of Purchaser's business. Purchaser agrees to cooperate, at no cost to Purchaser, with Triton or its affiliates, and execute any additional documents including, without limitation, any required municipal and/or state permits or applications, which may reasonably be required to effectuate the purpose of this Agreement and to facilitate Triton's Corrective Action. Purchaser further agrees not to interfere with the activities conducted by Triton on the Premises.

7

7. **ENTRY REQUIREMENTS.** Prior to any entry on to the Premises,

(a) Triton shall give reasonable advance notice (not less than twenty-four (24) hours, except in the event of an emergency, which may be telephonic or by e-mail) to Purchaser and any other person whose identity and contact information has been provided to Triton by Purchaser. Notwithstanding the foregoing, no notice need be given if the entry is solely for the purpose of inspecting or monitoring any Corrective Action facilities, including any wells, which are located outside of any buildings on the Premises, and which do not involve the repair, maintenance, or alteration to such facilities. Purchaser may have its representatives present to inspect the Corrective Action activities.

(b) Triton, with the reasonable cooperation of Purchaser, but at no expense to Purchaser, shall obtain and deliver copies to Purchaser, any and all permits, which may be required for the Corrective Action it conducts pursuant to this Agreement; and

(c) Triton shall require its contractors performing work on the Premises to maintain in effect insurance coverage appropriate (as reasonably determined by Triton and Purchaser) for the type and cost of work being performed for the Corrective Action contemplated under this Agreement. Triton shall, to the fullest extent permitted by law, be allowed to self-insure to the limits required under this Agreement.

8. **REPORTS.** Triton agrees to provide promptly to Purchaser copies of reports that are submitted to the Agency outlining the results of Triton's Corrective Action performed pursuant to this Agreement.

9. **SITE RESTORATION.** Triton agrees, upon completion of the Corrective Action contemplated by this Agreement as set forth in Section 5, at its expense, (i) to restore the disturbed surface areas of the Premises damaged by the Corrective Action to as near the approximate grade and pavement as existed prior to said Corrective Action as is reasonably possible, including proper plugging, abandonment or removal of any monitoring well as may be required in accordance with applicable law; and (ii) to repair any damage to the Premises caused by such removal, wear and tear excepted;. Triton shall not be responsible for the repair or replacement of underground utilities (except for public underground utilities damaged by Triton) on the Premises.

If it is determined, in Triton's reasonable discretion, from time to time that a portion of the Corrective Action facilities is no longer necessary in connection with the Corrective Action, then Triton shall, promptly following such determination, remove that portion of the Corrective Action facilities in accordance with the requirements of the preceding paragraph.

10. **INDEMNITIES.**

10.1 TRITON'S INDEMNIFICATION. FROM AND AFTER THE EFFECTIVE DATE, TRITON AGREES TO INDEMNIFY, DEFEND AND HOLD HARMLESS PURCHASER AND ITS SHAREHOLDERS, MEMBERS, PARTNERS, LENDERS AND THEIR RESPECTIVE OFFICERS, AND EMPLOYEES (COLLECTIVELY, THE "INDEMNIFIED PARTIES") FROM AND AGAINST ALL DEMANDS, CLAIMS, CAUSES OF ACTIONS, LOSSES, DAMAGES, LIABILITIES (INCLUDING WITHOUT LIMITATION ALL ENVIRONMENTAL LIABILITIES), COSTS AND EXPENSES (INCLUDING ATTORNEY'S FEES), (COLLECTIVELY,

"PURCHASER'S LOSSES") ARISING FROM TRITON'S BREACH OF THIS AGREEMENT AND ITS ACTS OR FAILURES TO ACT RELATED TO THE PERFORMANCE OF TRITON'S CORRECTIVE ACTION, BUT TRITON SHALL NOT INDEMNIFY, DEFEND, OR HOLD HARMLESS THE INDEMNIFIED PARTIES FOR THE GROSS NEGLIGENCE OR WILLFUL MISCONDUCT OF ANY OF THE INDEMNIFIED PARTIES. HOWEVER, TRITON'S INDEMNITY SHALL NOT COVER PURCHASER'S LOSSES ARISING FROM (A) ANY MATTERS CAUSED BY OR ARISING FROM MIGRATION OF CONTAMINANTS FROM PROPERTY OTHER THAN THE PREMISES, WHETHER SAID MIGRATION OCCURRED PRIOR TO THE EFFECTIVE DATE OR OCCURS AFTER THE EFFECTIVE DATE, UNLESS SAME ARE PART OF THE CORRECTIVE ACTION; (B) CONTAMINATION OF THE PREMISES THAT IS NOT SUBJECT TO TRITON'S CORRECTIVE ACTION; OR (C) THE CONDITION OF THE ASSETS, INCLUDING THE PREMISES AS OF THE DATE HEREOF, IT BEING UNDERSTOOD THAT PURCHASER HAS PURCHASED THE ASSETS DESCRIBED IN THE PURCHASE AND SALE AGREEMENT, INCLUDING THE PREMISES, ON AN "AS IS" BASIS, AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS ON THE PART OF TRITON AS TO WHAT THAT CONDITION MAY BE, EXCEPT AS EXPRESSLY SET FORTH HEREIN OR IN THE PURCHASE AND SALE AGREEMENT, INCLUDING THE EXHIBITS THERETO. NOTWITHSTANDING THE FOREGOING, ANY RIGHTS OR OBLIGATIONS RELATED TO ANY ENVIRONMENTAL CONDITION CAUSED OR CREATED ON OR ABOUT THE PREMISES WHICH ORIGINATES FROM SUBSTANCES THAT MIGRATE FROM ANY ADJOINING PROPERTY OWNED BY TRITON AT THE TIME OF MIGRATION SHALL NOT BE ALTERED BY THIS ARTICLE 10, OR GOVERNED HEREBY. TRITON'S INDEMNITY SHALL SURVIVE THE EXPIRATION OR TERMINATION OF THIS AGREEMENT FOR ONE (1) YEAR.

10.2 In furtherance thereof, Triton will not permit any mechanics', materialmen's or other liens of any type to be filed against any portion of the Property in connection with any Corrective Action. Purchaser shall have the right at all reasonable times to post and keep posted on the Premises any notices which it deems necessary for protection from such liens. If any such liens are filed which are not released or bonded around by Triton within thirty (30) days after notice from Purchaser, Purchaser may, without waiving its rights and remedies based on such breach of Triton, and without releasing Triton from any of its obligations, cause such liens to be released by any means it shall deem proper, including payments in satisfaction of the claim giving rise to such lien. Triton shall pay to Purchaser, within ten (10) days following demand by Purchaser, any amounts paid by Purchaser to remove such liens, together with interest on that sum at the higher of five percent (5%) above the discount rate charged by the San Francisco Federal Reserve Bank to its member banks, or the maximum rate allowed by applicable usury law (the "License Interest Rate") from the date of Purchaser's payment.

10.3 Purchaser's Indemnification. FROM AND AFTER THE EFFECTIVE DATE HEREOF, THE PURCHASER AGREES TO INDEMNIFY, DEFEND AND HOLD HARMLESS TRITON, ITS MEMBERS, SUBSIDIARIES, AFFILIATES, OFFICERS, DIRECTORS, EMPLOYEES, AND EACH OF THEIR, SUCCESSORS, HEIRS AND ASSIGNS (COLLECTIVELY, THE "TRITON INDEMNIFIED PARTIES") , FROM AND AGAINST ANY AND ALL DEMANDS, CLAIMS, CAUSES OF ACTION, LOSSES, DAMAGES, LIABILITIES (INCLUDING WITHOUT

LIMITATION ALL ENVIRONMENTAL LIABILITIES), COSTS AND EXPENSES (INCLUDING ATTORNEY'S FEES) (COLLECTIVELY, "TRITON'S LOSSES") ARISING FROM PURCHASER'S BREACH OF THIS AGREEMENT, BUT EXCLUDING HOWEVER ANY SUCH ACTS, FAILURES TO ACT OR CONDITIONS RELATED TO THE CORRECTIVE ACTION FOR WHICH TRITON SHALL REMAIN SOLELY AND FULLY RESPONSIBLE AND PURCHASER SHALL NOT INDEMNIFY, DEFEND, OR HOLD HARMLESS THE TRITON INDEMNIFIED PARTIES FOR THE GROSS NEGLIGENCE OR WILLFUL MISCONDUCT OF ANY OF THE TRITON INDEMNIFIED PARTIES. WITHOUT LIMITING THE FOREGOING, PURCHASER'S INDEMNIFICATION OBLIGATIONS SHALL COVER TRITON'S LOSSES ARISING FROM (A) MIGRATION OF CONTAMINANTS FROM PROPERTY OTHER THAN THE PREMISES, OR FROM ANY ADJOINING PROPERTY OWNED BY TRITON; AND (B) CONTAMINATION OF THE PREMISES THAT IS NOT SUBJECT TO TRITON'S CORRECTIVE ACTION, EXCEPT AS SET FORTH IN THIS AGREEMENT. NOTWITHSTANDING THE FOREGOING, ANY RIGHTS OR OBLIGATIONS RELATED TO ANY ENVIRONMENTAL CONDITION CAUSED OR CREATED ON OR ABOUT THE PREMISES WHICH ORIGINATES FROM SUBSTANCES THAT MIGRATE FROM ANY ADJOINING PROPERTY OWNED BY TRITON AT THE TIME OF MIGRATION SHALL NOT BE ALTERED BY THIS ARTICLE 10.3 OR GOVERNED BY THIS AGREEMENT. PURCHASER'S INDEMNITY SHALL SURVIVE THE EXPIRATION OR TERMINATION OF THIS AGREEMENT.

Further, neither party to this Agreement shall be liable to the other or to the Indemnified Parties for any punitive cost, expense, or damage, arising out of or in connection with this Agreement or any breach thereof.

11. DEFAULT.

(a) If Triton defaults in any of its obligations under this Agreement, Purchaser shall give notice to Triton identifying the default. If Triton fails to cure the default within thirty (30) days thereafter (or sooner, if the default is likely to cause immediate damages or injury to persons or property) then Purchaser may, by notice to Triton, immediately terminate this Agreement and take such other actions against Triton at law or equity as it shall determine in its sole discretion, including without limitation the right of self-help described below. Such termination is without prejudice to any other rights of remedy of Purchaser under applicable law. Provided, however, if such default is not reasonably capable of being cured within such thirty (30) day period (it being agreed that the payment of money is a curable default within such period), Triton will have an additional reasonable time to cure the default as long as it commences the cure within such thirty (30) day period and diligently pursues the cure to completion.

(b) In the event of a default by Triton, which is not cured within the times set forth in clause (a) above (or, in the case where Triton has an additional reasonable time to cure the default, if the default is not cured within ninety (90) days after the end of such thirty (30) day period), Purchaser shall have the right, but not the obligation, to cure such default for the account of, and at the expense of Triton; provided, however, that in the event of emergency conditions posing an immediate threat to persons or property and constituting a default, Purchaser acting in good faith shall have the right to cure such default upon such advance notice as is reasonably possible under the

circumstances. Any notice hereunder shall specify with particularity the nature of the default claimed and shall set forth the action which Purchaser proposes to take in order to cure the claimed default.

(c) Each party hereto shall have the right to prosecute any proceedings at law or in equity against any other party hereto, or any other person, violating, attempting to violate, threatening to violate, or defaulting upon any of the provisions contained in this Agreement, in order to prevent the violating or defaulting party or any such person from violating, attempting to violate, threatening to violate or defaulting upon the provisions of this Agreement and to recover damages for any such violation or default.

(d) All costs and expenses reasonably incurred by any party to cure a default of a defaulting party, together with interest thereon at the License Interest Rate, and all costs and expenses of any proceedings at law or in equity, including reasonable attorneys' fees awarded to any party by an order of court, shall be assessed against and paid by the defaulting or violating party within thirty (30) days following demand therefor, with reasonable documentation.

(e) It shall be a default by Triton under this Agreement if Triton discontinues or abandons the Corrective Action without the approval of the LARWQCB, and fails to resume the Corrective Action within thirty (30) days after receipt of notice from Purchaser (subject to delays due to events of "force majeure").

12. DISPUTE RESOLUTION. The Parties agree that should any dispute arise under this Agreement which cannot be amicably resolved, the dispute shall be submitted to mediation prior to being submitted to Arbitration under the rules and procedures of the American Arbitration Association and judgment upon the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof. Any mediator or arbitrator selected by the Parties shall be knowledgeable in environmental law and/or remediation technologies.

13. EXECUTION OF AGREEMENT. Each of the undersigned hereby represents and warrants that it is authorized to execute this Agreement on behalf of the respective Party to the Agreement and that this Agreement, when executed by those Parties, shall become a valid and binding obligation, enforceable in accordance with its terms. Purchaser represents and warrants that, subject to the Closing under the Purchase and Sale Agreement, it is the owner of the Premises or that it has full lawful authority to grant access to the Premises for the purposes described herein.

14. ASSIGNMENT, SUCCESSOR AND ASSIGNS. In the event Purchaser's interests in the Premises are conveyed, transferred or in any way assigned in whole or in part to any other person or entity, whether by contract, operation of law or otherwise, Purchaser shall take any and all reasonable actions to render any such conveyance, transfer or assignment subject to the terms of this Agreement and shall provide notice thereof to Triton.

15. NOTICE. Any notice, consent, request, report, demand, or other document required to be given to one Party by the other shall be in writing and be delivered to or mailed to the receiving Party at its address, referenced on page 1 above. Facsimile copies, or email sent by read receipt with an additional confirmatory email of receipt from the recipient, shall be sufficient. A Party may change its address by written notice to the other Party.

11

16. **MODIFICATIONS**. This Agreement contains the entire understanding of the Parties with respect to the matters set forth herein. Any change, amendment, or alteration must be in writing and signed by both Parties to this Agreement to be effective. This Agreement supersedes all prior discussions and agreements between the Parties with respect to the subject matter hereof and thereof.

17. **NO ADMISSIONS**. Nothing contained in this Agreement shall be construed as an admission of any fact or liability of any Party to this Agreement.

18. **GOVERNING LAW**. THIS AGREEMENT SHALL BE GOVERNED IN ALL RESPECTS BY THE LAWS OF THE STATE OF CALIFORNIA WITHOUT REGARD TO THE CONFLICT OF LAWS PRINCIPLES THEREOF.

19. **COUNTERPARTS**. This Agreement may be executed in multiple counterparts, each of which shall be deemed to be an original and of equal force and effect.

This report documents the excavation and offsite disposal of shallow vadose zone impacted soils at the Carson Air Harbor (CAH or Site) property. The Site is located at 21611 South Perry Street in Carson, California, and is currently owned by Triton Diagnostics, Inc. (Triton), a subsidiary of Shell Oil Company. A Site vicinity map is provided as Figure 1, and a Site plan is provided as Figure 2.

Petroleum hydrocarbon-impacted soil and groundwater were identified at the Site during various investigations beginning in 1990. Onsite historical metal fabrication operations and migration of offsite impacts onto the Site are the sources of the petroleum hydrocarbons. To address onsite impacts to soil in order to redevelop the Site for commercial/industrial use, a Soil Excavation Workplan (URS, 2014b) was developed by URS Corporation (URS) following a September 30, 2013 meeting and subsequent follow-up phone conversations and e-mail with the California Regional Water Quality Control Board, Los Angeles Region (LARWQCB) regarding the cleanup goals and excavation limits. The Soil Excavation Workplan was approved by the LARWQCB on April 21, 2014.

This Soil Excavation Report has been prepared by URS on behalf of the Equilon Enterprises, LLC, doing business as Shell Oil Products US (SOPUS) for submittal to the LARWQCB, and documents implementation of the Soil Excavation Workplan, which was approved by the LARWQCB in a letter dated April 21, 2014.

2.1 SITE GEOLOGY AND HYDROGEOLOGY

The shallow native materials consist of laterally discontinuous units of sandy to silty clays, silt, and silty to clayey sands typical of fluvial deposits. Root casts present in shallow soils in the area indicate the possibility of a former marsh or vegetated area with semi-saturated conditions (C2REM, 2010). In general, poorly consolidated clay dominates the subsurface.

Depth to groundwater onsite ranges from approximately 8 to 14 feet below ground surface (bgs). Water-bearing zones that do exist consist of discontinuous, interbedded silty to sandy perched zones in a poorly consolidated and saturated clay from about 10 to 30 feet bgs (A Zone), a silt-sand perched zone from about 35 to 50 feet bgs (B Zone), and interbedded silty to sandy perched zones from about 70 to 80 feet bgs (C Zone). Of these, the B Zone appears to be the most contiguous unit with the least amount of silt-clay interbeds (URS, 2011).

2.2 SITE HISTORY AND PREVIOUS ASSESSMENTS

Prior to development in the early 1960s, the Site was farm land. Since the early 1960s, tenants have included Plan Hold Corporation, Picket Industries, Air Harbor Machine Company, Inc., Focus Engineering Service, Aire RV and Sports Den, and Carson Trailer, Inc. (C2REM, 2004). The last tenant vacated the property in December 2009, and building demolition occurred in May 2011.

A septic tank was previously present at the Site adjacent to the southern boundary of the warehouse building. This tank was used by a former owner and/or operator during the 1960s-1970s as an underground storage tank (UST) for waste oil. The converted septic tank/UST was removed in May 1990 (Law Environmental, Inc., 1990). The approximate location of the former septic/waste soil tank is shown on Figure 2. Following its removal, soil samples were collected from the excavation pit under the supervision of the Los Angeles County Department of Public Works (LACDPW). Petroleum hydrocarbons were detected at concentrations exceeding the County's Pilot Program for Leaking Underground Storage Tanks. A subsequent investigation conducted by Conservtech in early 1991 concluded that contamination appeared to originate from multiple sources.

In January 1994, groundwater monitoring Well MW-1 was installed to 40 feet bgs near the southern wall of the warehouse in the area of the former septic tank/UST (Figure 2). Light non-aqueous phase liquid (LNAPL) was observed and volatile organic compound (VOC) and gas constituents were detected in the well (C2REM, 2010).

In 1997, during an investigation of petroleum hydrocarbons in the vicinity of South Perry Street, Montgomery Watson Harza (MWH) collected soil and groundwater samples on the Site. Results of the investigation indicated that LNAPL was present in a limited area around the former septic tank/UST (MWH, 1997). In March 1999, soil and groundwater sampling was conducted by URS Greiner Woodward Clyde on the Site to determine potential hydrocarbon impacts from the adjacent subsurface pipelines (C2REM, 2010). In 2001, additional groundwater sampling was conducted, and benzene was detected at concentrations up to 1.6 milligrams per liter (mg/L; MWH, 2002).

In early 2002, the tenant complained of "sewer like" odors in a portion of the building. This prompted additional assessment of environmental conditions at the Site in June and July 2002. C2REM with the support of MWH collected soil vapor samples at the CAH site from approximately 18 inches bgs. Elevated methane and benzene were detected in soil vapor near the former septic tank/UST; however, no significant methane or VOC concentrations were impacting adjacent residences to the north (C2REM, 2002). In January 2003, a limited vapor collection and treatment system was installed to mitigate the potential for vapor intrusion of methane to the area immediately beneath the building and some additional soil and groundwater sampling was conducted (C2REM, 2004).

In 2004, during their Perry Street Investigation Area (PSIA) sampling effort, C2REM installed soil vapor probes and collected soil samples in the former parking area of CAH in the southeastern portion of the Site. Benzene was detected in soil vapor at concentrations up to 1.000 parts per billion (ppb) at 2.5 feet bgs, up to 2,000 ppb at 5 feet bgs, and up to 7,700 ppb at 12 feet bgs. Soil samples collected during the vapor probe installation at 5 to 6 feet bgs contained concentrations of benzene up to 6.8 milligrams per kilogram (mg/kg), total petroleum hydrocarbons (TPH) as gasoline range organics (TPHg) up to 3,900 mg/kg, and TPH C_7-C_{44} up to 1,500 mg/kg.

In March through May 2011, at the request of the LARWQCB, URS, on behalf of SOPUS, advanced 21 Cone Penetrometer Test/Rapid Optical Screening Tool™ (CPT/ROST™) borings at the Site and installed groundwater monitoring wells at two locations. The borings were generally cleared with an air-knife as part of borehole clearance procedures to avoid accidently drilling through subsurface structures. As a result, limited soil analytical data was collected from the vadose zone during this investigation.

In July and August 2011, URS, on behalf of Resource Environmental L.L.C. (RELLC, an environmental management company), conducted an investigation of Dominguez Channel and the surrounding area, including the CAH facility, due to the presence of an LNAPL sheen in the channel (URS, 2011). The following is a summary of the shallow soil TPH results at the Site from investigations implemented by RELLC:

Sample ID	Detected Compound	Concentration (mg/kg)	Sample Depth (feet bgs)
MW-3-10	TPHg	2300	10
	TPHd	85	
	TPHo	3.5	
MW-5-10	TPHg	790	10
	TPHd	34	
	TPHo	ND	

Sample ID	Detected Compound	Concentration (mg/kg)	Sample Depth (feet bgs)
MW-6B-10	TPHg	1400	10
	TPHd	42	
	TPHo	ND	
MW-6C-10	TPHg	1500	10
	TPHd	130	
	TPHo	ND	
MW-7A-10	TPHg	3600	10
	TPHd	940	
	TPHo	ND	
MW-7B-10	TPHg	1800	10
	TPHd	330	
	TPHo	ND	
MW-7C-10	TPHg	2400	10
	TPHd	68	
	TPHo	ND	
MW-8B-7.5	TPHg	51	7.5
	TPHd	ND	
	TPHo	ND	
MW-8C-7.5	TPHg	ND	7.5
	TPHd	ND	
	TPHo	ND	
MW-9C-10	TPHg	0.55	10
	TPHd	ND	
	TPHo	ND	

mg/kg milligrams per kilogram
ND Not detected above the reporting limit shown in parentheses
TPHg total petroleum hydrocarbons as gasoline range organics
TPHd total petroleum hydrocarbons as diesel range organics
TPHo total petroleum hydrocarbons as oil range organics

Based on the results of the LNAPL assessment, the Site was not associated with LNAPL seepage into the Dominguez Channel (URS, 2011). Therefore, the LARWQCB determined that no additional actions related to the Section 13267 Investigative Order for Dominguez Channel, South of Carson Street were needed for this Site (LARWQCB, 2012). In August 2012, the Site was transferred from RELLC back to SOPUS.

2.2.1 2012 Vadose Zone Soil Investigation

In October 2012, URS conducted an investigation of shallow (0 to 10 feet bgs) soils below the CAH property to support preparation of a remedial action plan for TPH- and VOC-impacted shallow soil in the upper 10 feet of the Site (URS, 2013). During this investigation, soil samples were collected from 44 hand-auger borings and analyzed for a combination of VOCs, TPH, semi-volatile organic

compounds (SVOCs), and Title 22 metals. Soils observed consisted primarily of clay, silty clay, and gravelly clay. Groundwater was encountered in one boring, HA-44, at approximately 9.5 feet bgs. Soil staining and odor was observed in numerous borings from approximately 1.5 feet bgs to the total depth drilled. PID readings ranged from 0 parts per million (ppm) to 3,424 ppm (Boring HA-43 at 9.5 feet bgs).

The analytical results from this investigation are discussed below, and the TPHg, TPHd, TPHo, and benzene concentrations are shown on Figure 3. The results are compared to available San Francisco Bay Regional Water Quality Control Board (SFRWQCB) Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers from direct exposure to soils. The results that exceed the respective screening level are shown in color shading on Figure 3.

Volatile Organic Compounds

Twenty-three VOCs (including benzene, toluene, ethylbenzene, and xylenes [BTEX], methyl tert-butyl ether [MTBE], tert-butyl alcohol [TBA], and 1,2-dichloroethane) were detected at least once in 122 of the 134 soil samples collected and analyzed for VOCs. Detected concentrations were below the commercial/industrial worker SFRWQCB ESLs with the exception of benzene and ethylbenzene, as follows.

- Benzene was detected in 110 of 134 samples at concentrations up to 22,000 microgram per kilogram (µg/kg). Concentrations exceeding the commercial/industrial worker SFRWQCB ESL (3,700 µg/kg) were detected in 15 samples (at 12 locations).
- Ethylbenzene was detected in 83 of 134 samples at concentrations up to 50,000 µg/kg. Concentrations exceeding the commercial/industrial worker SFRWQCB ESL (24,000 µg/kg) were detected at six locations, which were co-located with benzene exceedences.

Petroleum Hydrocarbons

Petroleum hydrocarbons (TPHg, TPHd, and TPHo) were detected above laboratory reporting limits in 42 of the 44 soil borings, as follows.

- Concentrations of TPHg (C_6-C_{12}) greater than the commercial/industrial worker SFRWQCB ESL of 4,000 mg/kg were detected in four of 134 soil samples. The highest concentration (5,100 mg/kg) was detected at Boring HA-18 at an approximate depth of 10 feet.
- Concentrations of TPHd (C_{13}-C_{22}) greater than the commercial/industrial worker SFRWQCB ESL of 1,100 mg/kg were detected in 12 of 134 soil samples. The highest concentration (35,000 mg/kg) was detected in Boring HA-3 at a depth of 2 feet.
- TPHo (C_{23}-C_{44}) was not detected in the 134 soil samples analyzed at a concentration greater than the commercial/industrial worker SFRWQCB ESL of 100,000 mg/kg. The highest concentration detected was 78,000 mg/kg in Boring HA-3 at a depth of 2 feet.

Semi-Volatile Organic Compounds

Twenty soil samples collected from 20 borings at depths ranging from 2 to 10 feet bgs were selected for analysis of SVOCs. Seventeen SVOCs, including 15 PAHs, were detected in 14 of the 20 samples analyzed. Detected concentrations were below the commercial/industrial worker SFRWQCB ESLs, and based on this, do not pose a significant risk to human health.

Title 22 Metals

Twenty soil samples collected from 20 borings at depths ranging from 2 to 10 feet bgs were selected for analysis of Title 22 metals. Detected concentrations were below commercial/industrial worker SFRWQCB ESLs with the exception of arsenic. Arsenic concentrations ranged from 2.93 (Boring HA-44) to 7.86 mg/kg (Boring HA-1). The ESL for arsenic for the protection of commercial/industrial workers from direct exposure to soils is 1.6 mg/kg. However, the Department of Toxic Substances Control (DTSC) evaluated a large amount of arsenic data in Southern California and established an upper-bound background concentration of 12 mg/kg (Chernoff, et al., 2008). All the arsenic concentrations that were detected fall within the background concentration range; therefore, no further action with respect to arsenic should be required.

2.2.2 2014 Vadose Zone Supplemental Soil Investigation

On January 30, 2014, URS conducted a supplemental investigation of shallow (0 to 10 feet bgs) soils to further delineate subsurface impacts within the central, southern, and eastern portions of the Site to assist with remedial action planning (URS, 2014a). During this investigation, soil samples were collected from 12 hand-auger borings (HA-45 through HA-56) and analyzed for VOCs, TPHg, TPHd, and TPHo. The boring locations are shown on Figure 3.

The analytical results were compared to the commercial/industrial worker SFRWQCB ESL. The ESLs for benzene (3,700 µg/kg), TPHg (4,000 µg/kg), TPHd (1,100 µg/kg), and TPHo (100,000 µg/kg) were not exceeded in any of the 3- and 5-foot soil samples collected and analyzed. Benzene was detected in six of the 12 10-foot soil samples at concentrations exceeding its ESL, and TPHg was detected in one 10-foot soil sample above its ESL. The elevated concentrations of benzene and TPHg were located in the southern portion of the Site (HA-51, HA-52, and HA-53), in the southwestern portion of the Site (HA-55), in the north-central portion of the Site (HA-56), and in the east-central portion of the Site (HA-46). Additional VOCs were detected in many of the soil samples; however, the concentrations were well below established ESLs with the exception of ethylbenzene (ESL of 24,000 µg/kg) in the 10-foot samples collected from Borings HA-52 (27,000 µg/kg) and HA-56 (38,000 µg/kg).

2.3 SOIL EXCAVATION WORKPLAN

A Soil Excavation Workplan dated April 15, 2014 was prepared to address the impacted soil identified at the Site (URS, 2014b). The workplan was approved by the LARWQCB on April 21, 2014.

Based on the investigative results, the estimated total volume of in-place impacted soil was 4,318 in-place cubic yards (or 6,477 tons assuming 1.5 tons per cubic yard). Per the workplan, the soil was to be excavated to a maximum depth of 8 feet bgs in the central portion of the Site (shown in yellow on Figure 3), and 5 feet in the surrounding excavation areas (show in red on Figure 3). The proposed lateral excavation limits assumed impacts to soil extend approximately half way to the nearest non-impacted sampling location. This report documents the implementation of this workplan.

2.4 REMOVAL ACTION GOALS AND OBJECTIVES

Removal action objectives (RAOs) have been established for the Site to allow for its intended use as a commercial/industrial property and are protective of human health. Groundwater beneath the Site continues to be impacted from offsite sources.

The RAOs for the Site are:

- Minimize human exposure to volatile organic compounds (VOCs) and petroleum hydrocarbons in Site soils from dust (particulate) inhalation, dermal contact, and soil ingestion, such that the risk to human health for commercial/industrial land use meets regulatory standards;
- Minimize the potential for migration of VOCs from soil and groundwater into indoor air of future commercial/industrial buildings; and
- Obtain a "No Further Action (NFA)" decision for the vadose zone soil at the Site from the LARWQCB, with a commercial/industrial land use deed restriction, after completion of the removal action and prior to any redevelopment of the Site.

URS conducted a review of available published screening levels for use as target cleanup goals (TCGs). After an analysis of the available published screening levels, the SFRWQCB ESLs for the protection of commercial/industrial workers from direct exposure to soils (Table K-2. Direct Exposure Soil Screening Levels, Commercial/Industrial Worker Exposure Scenario; December 2013) were selected as the appropriate TCGs for soil risk at this Site. Cleanup to the ESLs provides protection for direct exposure to soil during construction activities and commercial/industrial use of the Site. The use of these ESLs for TCGs was negotiated with the LARWQCB and approved as part of the Soil Excavation Workplan. The TCGs are summarized in the following table.

Chemical of Concern (COC)	Target Cleanup Goal (TCG) For Soil	Basis
Total Petroleum Hydrocarbons		
TPHg (C_6-C_{12})	4,000 mg/kg	Commercial/Industrial Worker SFRWQCB ESLs
TPHd (C_{13}-C_{22})	1,100 mg/kg	
TPHo (C_{23}-C_{44})	100,000 mg/kg	

Chemical of Concern (COC)	Target Cleanup Goal (TCG) For Soil	Basis
Volatile Organic Compounds		
Benzene	3,700 µg/kg	Commercial/Industrial Worker SFRWQCB ESLs
Ethylbenzene	24,000 µg/kg	

The listed COCs in the above table are the target compounds. However, if other VOCs are detected, the concentrations were compared to the corresponding ESLs for the protection of commercial/industrial workers.

In order to achieve the RAOs, the following tasks were proposed in the Soil Excavation Workplan:

- Remediate VOC- and petroleum hydrocarbon-impacted soils from 0-8 feet bgs in the central portion of the Site (around HA-17, HA-18, and HA-26) that exceed TCGs for the protection of commercial/industrial workers from direct exposure to soils;
- Remediate petroleum hydrocarbon-impacted soil from 0-5 feet bgs in the western, northeastern, and southern portions of the Site (around HA-24, HA-32, and HA-3, respectively) that exceed TCGs for the protection of commercial/industrial workers from direct exposure to soils;
- Mitigate the potential for migration of VOCs from soil and groundwater into indoor air through construction of passive vapor barriers beneath future buildings; and
- Following soil removals, manage residual impacted soils at the Site through development and implementation of a Soil Management Plan.

Groundwater is shallow and is impacted with VOCs and TPH, and will be addressed separately in conjunction with offsite groundwater impacts that are from an offsite source. A deed restriction will be added to keep the land use as commercial/industrial and to require engineering controls for future buildings and institutional controls for future soil management.

2.5 NATURE AND EXTENT OF CONTAMINATION

Based on the 2012 and 2014 vadose zone soil investigations, VOCs and petroleum hydrocarbons were identified in the shallow soils at concentrations that posed a potential human health risk to commercial/industrial workers. Two VOCs (benzene and ethylbenzene) were detected at concentrations above the SFRWQCB ESLs for the protection of commercial/industrial workers from direct exposure to soils in 21 and 8 samples, respectively. Most of these exceedences were in samples collected at 10 feet bgs, where the exposure pathway is incomplete for direct contact. Only three 5-foot samples had benzene concentrations above the commercial/industrial worker ESL of 3,700 µg/kg – HA-17 (4,100 µg/kg), HA-18 (7,700 µg/kg), and HA-26 (5,900 µg/kg). Based on these detections, excavation to a maximum depth of 8 feet bgs in the area of these three borings was proposed, as shown on Figure 3.

The highest concentrations of TPH were identified in the central and southern portions of the Site (Figure 3). Impacts in the northern and western parts of the Site were generally below regulatory screening levels. The maximum concentration of TPHg (5,100 mg/kg) was detected in a 10-foot sample at HA-18 located in the central portion of the Site; the maximum concentrations of TPHd and TPHo (35,000 and 78,000 mg/kg, respectively) were detected in the 2-foot sample from HA-3 located along the southern edge of the Site.

Based on the RAOs, excavation and offsite disposal of VOC- and petroleum hydrocarbon-impacted soil located in the central portion of the Site (HA-17, HA-18, and HA-26) in the upper 8 feet was proposed to allow for redevelopment of the Site with minimal health and safety concerns. Additionally, excavation and offsite disposal of TPHd-impacted soils in the vicinity of Borings HA-3, HA-24, and HA-32 in the southern, western, and northern portions of the Site, respectively, was proposed to a maximum depth of 5 feet bgs (Figure 3).

The field procedures and methods that will be used to implement the soil excavation activities at the Site are described in this section.

3.1 PERMITTING

Necessary permits and/or approvals required to implement the soil excavation activities were obtained prior to any field activities. A grading permit was obtained from the County of Los Angeles Department of Public Works, Building and Safety/Land Development Division for the excavation work. A copy of the grading permit is included in Appendix A.

South Coast Air Quality Management District (SCAQMD) Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil, sets forth the requirements to control the emission of VOCs generated from the excavation and handling of VOC-contaminated soil. VOC-contaminated soil is defined as having VOC concentrations of 50 parts per million (ppm) or greater as measured by a hexane-calibrated organic vapor analyzer (OVA). A Site Specific Rule 1166 Contaminated Soil Mitigation Plan ("Site Specific Plan") was approved by the SCAQMD for the excavation and handling of potential VOC-contaminated soil at the Site (Mitigation Plan No. 567206). A copy of the Site Specific Plan is included in Appendix A. Per the Site Specific Plan, the SCAQMD was notified of the VOC-contaminated soil and Rule 1166 monitoring was conducted as discussed in Section 3.7.3. Vapor monitoring for health and safety purposes was also conducted during the soil removal activities as discussed below in Section 3.7.2.

3.2 CONTRACTOR SCOPES OF WORK

URS, on behalf of SOPUS, managed the project and performed field oversight, dust monitoring, air monitoring for health and safety purposes, soil confirmation sampling, data evaluation, and reporting. Innovative Construction Solutions, Inc. (ICS), located in Santa Ana, California and a subcontractor to URS, performed soil excavation, loading, dust control and Rule 1166 monitoring. ICS is a licensed California General Engineering 'A' contractor with hazardous materials certification.

ICS subcontracted West Coast Sand & Gravel, Inc. to haul soil to the disposal facility and bring in clean fill, Smith-Emery Company to perform soil compaction testing, and Soil Safe of California, Inc. (Soil Safe) to thermally treat and recycle the non-hazardous soil waste at its facility in Adelanto, California.

URS subcontracted Eurofins Calscience, Inc. (Calscience) to analyze confirmation soil samples at its laboratory in Garden Grove, California. Calscience is accredited to perform the chemical analyses under the National Environmental Laboratory Accreditation Program (NELAP ID 03220CA).

A URS Field Manager was onsite for the duration of the remedial activities to monitor and document the soil removal activities.

3.3 SITE PREPARATION ACTIVITIES

Prior to implementation of the soil excavation activities, the following were conducted:

- Surveyed the excavation areas and marked the limits with flags and paint
- Installed low visibility windscreen on the previously installed fencing around the perimeter of the Site
- Notified Underground Service Alert (Dig Alert) at least two days prior to the start of field work to allow for member utility companies to mark underground lines that might conflict with the proposed removal actions, and
- Profiled the impacted soil to be removed using existing investigative data and obtained approval from the receiving facility, as discussed below in Section 3.4.2.

3.4 SUMMARY OF SOIL REMOVAL ACTIVITIES

Between September 9 and October 8, 2014, 7,255.69 tons (approximately 4,837 in-place cubic yards assuming 1.5 tons per cubic yard) of impacted soil were excavated from the Site and disposed offsite. The final limits of the four excavations (Areas 1 through 4) are shown on Figure 4. Details for excavation Areas 1 through 4 are shown on Figures 4A through 4D, respectively.

An excavator was used to excavate the soil. The soil was direct loaded into end dump trucks and immediately transported offsite to the disposal facility. As the soil was excavated, a limited quantity of clean overburden was segregated and temporarily stockpiled. Soil that was not stained and had low organic vapor readings (less than 50 parts per million [ppm]) was segregated. This soil was sampled and reused onsite as backfill, as discussed below in Section 3.4.1. Dust and vapor suppression procedures implemented during the excavation activities are discussed below in Section 3.5.

Groundwater monitoring wells currently onsite were protected in-place during the soil excavation activities. Existing shallow vapor probes/vapor wells within the excavation footprints were removed during the excavation activities.

For safety purposes, temporary barricades constructed of pylons and snow fencing were placed approximately 5 to 10 feet from the edge of each of the excavations while they remained open pending LARWQCB approval to backfill.

Once the soil had been excavated to the pre-established dimensions and any extraneous/loose soil had been removed, confirmation soil samples were collected from the sidewalls of the excavations. Based on the RAOs for this removal action, soil below 5 feet in Areas 1 through 3 and soil below 8 feet in Area 4 remained in place so bottom confirmation soil sampling was not conducted. If a chemical concentration in a confirmation sidewall sample exceeded the Site-specific cleanup goals listed above in Section 2.4, additional soil was removed in a lateral direction and additional sidewall confirmation soil samples were collected from the newly-exposed excavation surface. This process was repeated until confirmation sample results below the RAOs were obtained. The confirmation sampling program is discussed in Section 4.

3.4.1 Overburden Segregation and Sampling

Excavated soil was screened by the contractor with a photo-ionization detector (PID) in accordance with SCAQMD Rule 1166 (see Section 3.7.3 below). Overburden soils that were not stained and had PID readings less than 50 ppm were stockpiled and considered potentially suitable for re-use as backfill. Three small stockpiles of overburden soil, a total of approximately 100 cubic yards, were generated during the excavation activities. Three soil samples (one from each stockpile) were collected and analyzed for VOCs by U.S. Environmental Protection Agency (USEPA) Method 5035/8260B and TPH C_6-C_{44} by USEPA Method 8015B (M) to assess whether the stockpiled soils met the Site's cleanup goals and could be re-used as backfill. The samples were handled as described in Section 4.1 below for confirmation soil samples, and analyzed by Calscience. Copies of the laboratory reports are included in Appendix B.

Based on the stockpile sampling analytical results, which are summarized in Table 1, the overburden soil was deemed environmentally suitable for reuse onsite as backfill. However, two of the stockpiles (represented by samples SP1-091614 and SP2-091614) were deemed geotechnically unsuitable for reuse. Thus, only about 25 cubic yards of overburden soil (represented by sample SP3) were used as backfill, as discussed in Section 5.

3.4.2 Offsite Soil Disposal

The soil excavated from the Site was transported offsite for thermal treatment and recycling at the Soil Safe treatment facility located in Adelanto, California. The soil was profiled as non-hazardous waste using existing investigative data, and the profile was accepted by the disposal facility prior to transport. A copy of the facility's acceptance letter is included in Appendix C.

The soil was direct-loaded into the transport trucks using the excavator. A total of 7,255.69 tons of impacted soil were removed from the Site and transported to Soil Safe. A copy of the tonnage log and copies of the non-hazardous waste manifests and weight tickets for the removed soil are provided in Appendix C. As indicated in the tonnage log, three trucks loaded on September 23, 2014, arrived at Soil Safe on September 24, 2014 (no excavation occurred on September 24, 2014 so Rule 1166 monitoring was not conducted that day).

3.5 CONTROL MEASURES

3.5.1 Dust Suppression

Dust suppression was performed and control measures were implemented at the Site during all soil handling activities, including soil excavation, load-out, and backfilling, to reduce the potential for fugitive dust and migration of contamination in compliance with requirements contained in SCAQMD Rule 403. Dust suppression was performed by lightly spraying or misting the active work areas with water. This included spraying the working face of the soil excavation, the soil in the excavator bucket during excavation and loading activities, and the onsite traffic routes.

Additional dust control measures included the following:

- The Site perimeter was secured with fencing fitted with low permeability windscreen.
- Temporary overburden soil stockpiles were covered with plastic sheeting to control dust. The stockpiles remained covered until reuse.
- Efforts were made to minimize the soil drop height from the excavator bucket into the transport trucks.
- After the soil was loaded into the transport trucks, the soil was covered to prevent soil from spilling out of the truck during transport to the disposal facility.
- While on the property, all vehicles maintained slow speeds (i.e., less than 5 miles per hour) for safety purposes and for dust control measures.
- Track-out of particulates onto the adjacent public paved roadways was controlled by placing shaker plates at the Site exit.
- Street sweeping of the adjacent public streets was implemented to reduce the potential for fugitive dust and migration of contamination.

Dust monitoring was conducted as described below in Section 3.7.1 in accordance with the site-specific HSP and SCAQMD Rule 403.

3.5.2 Odor and Vapor Control

In addition to controlling fugitive dust, the measures listed above assisted in controlling vapors and odors emanating from the TPH- and VOC-impacted excavated soil and working face. Further measures to control odor and vapor included the following:

- ODEX™, an odor mitigating agent, was added to the dust control water spray during the soil excavation and loading activities.
- During the excavation of Area 4, foam suppressant was utilized twice as an alternative method to control vapors and odors; however, based on the size of the excavation area and requirements to stay at least 3 feet from the top of the excavation walls, it was difficult to get the foam at the appropriate locations (along the sidewalls, working face, and excavator bucket).

Vapor monitoring was conducted as described below in Sections 3.7.2 and 3.7.3 in accordance with the site-specific HSP and SCAQMD Rule 1166.

3.6 HEALTH AND SAFETY PLAN

Prior to beginning fieldwork, URS prepared a site-specific health and safety plan (HSP) pursuant to Title 29 Code of Federal Regulations, Section 1910.120. The HSP was also prepared according to California Division of Occupational Safety and Health (Cal/OSHA) requirements. URS field

personnel reviewed the HSP prior to commencing field activities, and a copy of the HSP was kept onsite during excavation activities at all times. Prior to initiation of field activities each day, a Site safety briefing was conducted to identify potential physical and chemical hazards and outline measures to be taken in the event of an emergency.

3.7 AIR MONITORING

3.7.1 Dust Monitoring

Airborne dust monitoring was conducted during the excavation, loading, and backfilling activities between September 9 and October 9, 2014, to verify and document the effectiveness of dust suppression measures in compliance with SCAQMD Rule 403 for fugitive dust emissions. Based on the total volume of soil excavated, notification or filing of a Fugitive Dust Emission Control Plan was not required.

Dust monitoring was conducted during soil handling activities using portable, hand-held, continuous real-time particulate dust monitors to verify and document dust suppression efforts. Air monitoring for dust was performed during the soil excavation, loading, and backfilling activities at the perimeter of the Site utilizing an upwind/downwind sampling approach to ensure compliance with the SCAQMD Rule 403 for fugitive dust control, with one upwind, one downwind, and one sensitive receptor location (the nearest sensitive receptors are the residences located adjacent to the north). The locations of the dust monitors are depicted on figures included in Appendix D. The real-time and time weighted average (TWA) particulate readings were checked and recorded by onsite personnel approximately every 15 minutes.

The SCAQMD Rule 403 action level for the difference in dust readings between upwind and downwind locations is 50 micrograms per cubic meter ($\mu g/m^3$), based on dust particles measuring 10 micrometers or less (PM10). This action level (50 $\mu g/m^3$) was selected as the action level for dust monitoring activities at the perimeter of the property (difference between upwind and downwind readings).

The dust monitoring logs recording the upwind and downwind perimeter readings, as well as the excavation area and OBZ readings, are included in Appendix D. The particulate readings are presented in mg/m^3. As noted in the logs, the difference between the upwind and downwind readings exceeded the Community Action Level of 50 $\mu g/m^3$ (0.05 mg/m^3) for dust several times, predominantly on the first day of excavation activities (September 9, 2014). The initial placement of the downwind monitor in close proximity to the exiting transport trucks is believed to be the cause of most of the elevated readings. Subsequently, additional dust control was conducted within the onsite traffic areas and the downwind monitor was located in an area more representative of downwind Site conditions.

3.7.2 Health and Safety Monitoring

During the soil excavation activities, the breathing zone in the work area was monitored for organic vapors, typically every 15 minutes, using a calibrated PID, in accordance with the HSP. Copies of the VOC monitoring logs are included in Appendix E. Based on the PID readings of greater than 10 ppm in the workers' breathing zone, an upgrade to Level C PPE (half-face respirator) was necessary on September 23, 29, and 30, and October 2, 3, and 8, 2014.

3.7.3 Rule 1166 Monitoring

During the soil excavation activities, VOC monitoring of the soil was conducted in accordance with the Site Specific Rule 1166 Contaminated Soil Mitigation Plan (see Appendix A). The initial notification to the SCAQMD as required by the Rule 1166 permit was made on September 9, 2014. A copy of the notification (No. 374127) is included in Appendix F. In accordance with SCAQMD requirements, a PID, calibrated to hexane according to manufacturer's specifications, was used to monitor and record VOC emissions from the excavated soils during excavation. The soils were monitored in the excavator bucket, approximately 3 inches off the top of the soil surface. The PID calibration and measurements were recorded on designated Rule 1166 Soil Monitoring Record forms, copies of which are included in Appendix F.

SCAQMD was notified within 24 hours of detecting soil with PID concentration greater than 50 ppm on September 10, 2014. SCAQMD was notified within 1 hour of detecting soil with PID concentration greater than 1,000 ppm on September 11, 2014. Copies of the notifications (Nos. 374365 and 374496) are included in Appendix F.

3.7.4 Odor Complaints

During the excavation activities, complaints from neighbors were received. The initial compliant was directed to SOPUS and occurred on September 18, 2014. A tenant in the downwind apartments east of S. Perry Street indicated that she had issues with odor for the last 4 months. Following receipt of the complaint, a subsequent assessment indicated that the odor was apparently coming from a storm drain manhole near the corner of S. Perry and Carson Streets. The SCAQMD was notified of this complaint and further assessment of the storm drain odor is ongoing.

Additional complaints were received by SCAQMD during the excavation of Area 4 and SCAQMD staff visited the site multiple times. URS filed a public records request for complaints filed under the Site Specific Plan on October 3, 2014, and received two complaint reports from the SCAQMD. Copies of the complaint reports are included as Appendix G.

Confirmation soil sampling was conducted after the soil excavations were completed to the proposed limits to verify that the target cleanup goals for the COCs presented in Section 2.4 were achieved. The sampling and analysis were conducted in accordance with the applicable quality control procedures described in the Soil Excavation Workplan (URS, 2014b).

The soil sampling procedures, analytical program, and results are discussed in the following sections.

4.1 CONFIRMATION SOIL SAMPLING PROCEDURES

The confirmation soil sampling locations for the remedial excavations are depicted on Figures 4A through 4D for Areas 1 through 4, respectively. For the 5-foot deep excavations, the sidewall samples were collected at approximately 2.5 feet bgs. For the 8-foot excavation, the sidewall samples were collected at approximately 6 feet bgs. Per the approved Soil Excavation Workplan, bottom confirmation soil samples were not collected as residual mass is still present in deeper soil and shallow groundwater.

For the 5-foot deep Areas 1, 2, and 3, a ramp was constructed to provide ingress and egress from the excavations and confirmation soil samples were collected directly from the sidewalls into laboratory-supplied sample containers. For the 8-foot deep Area 4, the confirmation soil samples were generally collected using the excavator bucket, then the soil was transferred into the sample containers from the bucket[1]. For both sampling methods, there was no need for the decontamination of sampling equipment or the collection of equipment blanks. Soil for TPH analysis was contained in 4-ounce glass jars, while the soil samples for VOC analyses were collected in Encore samples in accordance with USEPA Method 5035.

The soil samples were labeled with the following information: identification (ID) number, project number, Site name, date and time of collection, requested analysis, and the sampler's initials. The confirmation samples were designated with the letters "CS" with the respective excavation area, followed with the sample number and sample depth, e.g., CS1-01-2.5. Blind duplicate samples, which were analyzed at a rate of at least 10 percent of the primary samples, were identified using the designator "DUP" (e.g., DUP-1). Where additional excavation and confirmation sampling were necessary due to the presence of elevated COCs, the step-out confirmation samples were identified with a letter suffix (e.g., CS4-09A-6.0).

4.2 CONFIRMATION SOIL SAMPLE ANALYSIS

The confirmation soil samples were submitted to Calscience for analysis. The laboratory job number is included with each sample in the confirmation sampling summary table for ease in cross-referencing the laboratory reports, which are presented in Appendix H. The samples were placed in coolers chilled with ice pending delivery to the laboratory. Chain-of-custody documentation was

[1] Confirmation sample CS4-09F-6.0 was collected using hand-auger equipment to assess the lateral extent of over-excavation that would be necessary in order to coordinate scheduling of transport trucks.

maintained for the soil samples and was delivered with the samples to the laboratory. Copies of the chain-of custody records are included in the laboratory reports in Appendix H.

The confirmation soil samples were analyzed for VOCs by USEPA Method 8260B/5035 and TPH (C_6-C_{44}) by USEPA Method 8015B (M).

4.3 QUALITY ASSURANCE/QUALITY CONTROL

4.3.1 Quality Control Samples

Quality assurance/quality control (QA/QC) samples were collected as part of the overall QA/QC program. These samples include laboratory quality control (QC) samples such as laboratory reagent blanks and matrix spike samples and field QC samples such as field duplicates.

Field duplicate samples were collected and analyzed to evaluate sampling and analytical precision. Field duplicates were collected as sub-samples of the original sample material and analyzed in the same manner as the primary samples. Per the approved Soil Excavation Workplan (URS, 2014b), duplicate soil samples were collected and analyzed at a rate of at least 10 percent of the total number of primary final confirmation samples.

4.3.2 Data Validation

URS performed a limited data validation, comparable to a Tier II data validation, on the confirmation soil sampling analytical data. The data for the field QC samples (field duplicates) were reviewed as part of the data validation, along with laboratory quality control results. A Data Validation Memorandum for the laboratory reports reviewed is presented in Appendix I.

The limited data validation used the same criteria contained in the USEPA Contract Laboratory Program (CLP) National Functional Guidelines for Superfund Organic Methods Data Review (USEPA, 2008); however, the review did not include checking the raw data, calibrations, and calculations. Instead, limited data validation utilizes the data summary and QA/QC summary provided in the laboratory standard report. Data from the analyses were evaluated in the following areas based on criteria for quality control samples:

- Data completeness
- Holding times and preservation
- Method blanks
- System monitoring compounds (surrogates)
- Laboratory control samples
- Matrix spike/matrix spike duplicates
- Field duplicates, and
- Compound identification and quantitation.

The following is a summary of the limited data validation for soil samples associated with confirmation soil sampling:

- Due to matrix interferences, the results for TPH C_6-C_{44} (total) for five samples were qualified as estimated ("J/UJ").
- Due to field duplicate imprecision, the results for a number of USEPA Method 8260B analytes for two field duplicate pairs were qualified as estimated ("J").

The soil data qualifiers are included with the confirmation analytical results in Table 2. Overall, the soil data met the data quality objectives as described in the Data Validation Memorandum provided in Appendix I.

4.4 CONFIRMATION SOIL SAMPLING ANALYTICAL RESULTS

The analytical results for the confirmation soil sampling are summarized in Table 2. The confirmation soil sampling locations for the excavation areas are shown on Figures 4A through 4D with the TPH and benzene results. Sample results exceeding the TCGs are highlighted in Table 2 and on Figure 4D. The confirmation soil samples that were subsequently excavated are gray shaded in Table 2. Copies of the laboratory analytical reports and chain-of custody records for the confirmation soil samples are included as Appendix H.

For primary and duplicate samples, the highest concentration for the pair was used to represent the confirmation sample location.

As discussed in the Soil Excavation Workplan (URS, 2014b), the excavations were considered complete if the confirmation analytical results did not exceed the TCGs for soil presented in Section 2.4. If the detected COC concentrations in the confirmation soil samples exceeded the TCGs based on chemical analysis, further excavation and confirmation sampling were conducted until the RAOs were met.

4.4.1 Excavation Area 1

TPH-impacted soil was excavated from Area 1 to a total depth of 5 feet bgs. The final limits of the excavation are shown on Figure 4A. Analytical results for the eight sidewall samples collected were below the TCGs (Table 2). The maximum detected concentrations of TPHg, TPHd, TPHo, and benzene were 67, 289, and 488 mg/kg and 1,000 µg/kg, respectively.

The confirmation soil sampling results were submitted to the LARWQCB for review, and the LARWQCB provided verbal approval to backfill. The excavation was subsequently backfilled as discussed in Section 5.

4.4.2 Excavation Area 2

TPH-impacted soil was excavated from Area 2 to a total depth of 5 feet bgs and lawfully disposed of offsite. The final limits of the excavation are shown on Figure 4B. Analytical results for the eight

sidewall samples collected were below the TCGs (Table 2). The maximum detected concentrations of TPHg and benzene were 6.3 mg/kg and 61 µg/kg, respectively. Concentrations of TPHd and TPHo were not detected above the reporting limits.

The confirmation soil sampling results were submitted to the LARWQCB for review, and the LARWQCB provided verbal approval to backfill. The excavation was subsequently backfilled as discussed in Section 5.

4.4.3 Excavation Area 3

TPH-impacted soil was excavated from Area 3 to a total depth of 5 feet. The final limits of the excavation are shown on Figure 4C. Analytical results for the four sidewall samples collected were below the TCGs (Table 2). The maximum detected concentrations of TPHg, TPHd, TPHo, and benzene were 64, 124, and 618 mg/kg and 58 µg/kg, respectively.

The confirmation soil sampling results were submitted to the LARWQCB for review, and the LARWQCB provided verbal approval to backfill. The excavation was subsequently backfilled as discussed in Section 5.

4.4.4 Excavation Area 4

Soil impacted with benzene and ethylbenzene was excavated from Area 4 to a total depth of 8 feet bgs. The final limits of the excavation are shown on Figure 4D. Analytical results for three of the 11 initial sidewall samples collected exceeded the TCGs (Table 2). TPHg was detected in sample CS4-07-6.0 at a concentration of 7,190 mg/kg, and benzene was detected in samples CS4-08-6.0 and CS4-09-6.0 at concentrations of 5,000 and 5,100 µg/kg, respectively. Several rounds of subsequent excavation were conducted in 5-foot lateral intervals, and additional confirmation samples were collected from the newly exposed sidewalls. Concentrations of COCs, namely TPHg and benzene, in the final confirmation samples, CS4-07D-6.0, CS4-08B-6.0, and CS4-09F-6.0, were below the TCGs (Table 2). The maximum detected concentrations of TPHg, TPHd, and benzene in the final confirmation samples were 2,370 and 41 mg/kg and 2,800 µg/kg, respectively. Concentrations of TPHo were not detected above the reporting limits in any of the Area 4 confirmation samples.

The confirmation soil sampling results were submitted to the LARWQCB for review, and the LARWQCB provided verbal approval to backfill. The excavation was subsequently backfilled as discussed in Section 5.

During the soil removal activities, URS requested approval from the LARWQCB to backfill the excavation areas in advance of formal LARWQCB approval of this completion report. The excavation areas were backfilled with imported clean fill or with an approximate 50:50 mix of crushed concrete and imported fill and a small amount of clean overburden soil.

The crushed concrete was generated during the demolition of the facility and had been stockpiled onsite (Figure 3). Prior to use as backfill, six samples of the crushed concrete were collected and analyzed for TPHg, TPHd, and TPHo by USEPA Method 8015B (M), Title 22 metals by USEPA Method 6010B/7471A, organochlorine pesticides (OCPs) by USEPA Method 8081A, PAHs by USEPA Method 8270C Selected Ion Monitoring (SIM), and asbestos by Polarized Light Microscopy (PLM). The Calscience laboratory reports are included in Appendix J, and the analytical results are summarized in Table 3. Based on the sampling results, the crushed concrete was deemed suitable for reuse onsite as backfill, which was approved by the LARWQCB in a letter dated September 16, 2014.

The imported fill was Irwindale Fill Sand supplied by Hanson Aggregates produced at their Irwindale California Plant SMARA No. 91-19-0025. Per the facility, the sand is produced from virgin aggregate materials and does not contain claimed or recycled materials. A representative sample of the sand was collected by others (for another import project) and analyzed for petroleum hydrocarbons, VOCs, OCPs, and metals. Based on the sampling results, the fill was deemed suitable for use as backfill at the Site.

The backfilling activities occurred between September 18 and October 9, 2014. The crushed concrete and imported sand were mixed with a loader, then the backfill was placed in lifts of approximately 12 inches to maintain compaction requirements. The loader and a sheepsfoot roller were used to compact the fill. The material was moistened as it was placed in the excavations. In-situ density tests conducted by Smith-Emery Company indicated a minimum relative compaction of 90 percent was achieved relative to the maximum dry density obtained from ASTM D1557.

This Soil Excavation Report describes the removal activities conducted to address shallow vadose zone impacted soils at the Carson Air Harbor property. The soil removal activities included the excavation and offsite disposal of TPH-impacted soil to 5 feet bgs and VOC-impacted soil to approximately 8 feet bgs.

Site preparation activities began on September 8, 2014, and soil excavation, loading, transport, offsite disposal were conducted between September 9 and October 8, 2014, in accordance with procedures described in the LARWQCB-approved Soil Excavation Workplan. A total of 7,255.69 tons (approximately 4,837 in-place cubic yards assuming 1.5 tons per cubic yard) of soil was excavated from the Site and was transported to the Soil Safe treatment facility in Adelanto, California, for thermal treatment and recycling.

Based on confirmation soil sampling for each of the excavations, the cleanup criteria set out in the workplan have been met. URS has also prepared a Soil Management Plan for the Site to mitigate potential future exposure to residual petroleum hydrocarbons and odor generation during invasive activities onsite, particularly redevelopment. This plan is included in Appendix K and will be included as part of the sales agreement for this property.

SOPUS is in the process of adding a deed restriction to the property limiting future use to commercial/industrial use only. SOPUS is also requiring that engineered controls be applied to any building or structure that is constructed on the Site that has indoor air in order to prevent vapor intrusion from the subsurface (i.e., a vapor barrier).

Based on removal of soil above the cleanup criteria and additional controls placed on the property to limit potential exposure to remaining impacted soil and groundwater, URS, on behalf of SOPUS, is requesting that the RWQCB issue a no further action for vadose zone soils at this Site.

Notes:

* Target cleanup goals (TGCs) are the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers (Table K-2. Direct Exposure Soil Screening Levels, Commercial/Industrial Worker Exposure Scenario; December 2013).

-- No screening level established

Volatile Organic Compounds by U.S. Environmental Protection Agency (USEPA) Method 8260B/5035

TPH - Total Petroleum Hydrocarbons

TPH (C_6-C_{44}) by USEPA Method 8015B (M)

µg/kg - micrograms per kilogram

mg/kg - milligrams per kilogram

ND - Not detected above the laboratory reporting limit

Yellow shading indicates that concentration exceeds the TGC.

Soil represented by the sample was subsequently excavated.

J - The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Asbestos								
Asbestos	%	**--**	ND	ND	ND	ND	ND	ND

Notes:

* The screening levels for the crushed concrete comprise the target cleanup goals (TCGs) for the site, which are the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers (Table K-2. Direct Exposure Soil Screening Levels, Commercial/Industrial Worker Exposure Scenario; December 2013).

** The screening level for arsenic is greater than naturally-occurring background concentrations, which is approximately 12 mg/kg in the Los Angele Basin (Department of Toxic Substances Control [DTSC], 2007).

-- No screening level established

TPH - Total Petroleum Hydrocarbons

TPH as Gasoline by USEPA Method 5035/8015B (M)

TPH as Diesel by USEPA Method 8015B

TPH as Motor Oil by USEPA Method 8015B (M)

Organochlorine Pesticides (OCPs) by USEPA Method 8081A

Polycyclic Aromatic Hydrocarbons (PAHs) by USEPA Method 8270C Selected Ion Monitoring (SIM)

Metals - Title 22 metals by U.S. Environmental Protection Agency (USEPA) Method 6010B/7471A

Asbestos by Polarized Light Microscopy (PLM)

mg/kg - milligrams per kilogram

µg/kg - micrograms per kilogram

ND - Not detected above the laboratory reporting limit

HD - The chromatographic pattern was inconsistent with the profile of the reference fuel standard.

SITE PLAN SHOWING
GROUNDWATER MONITORING WELLS

Proj. No.: 49194145	Date: DECEMBER 2014
Project: SHELL CARSON AIR HARBOR AND PERRY STREET INVESTIGATION AREA	Figure: 2

EXPLANATION

- DC-1 — MONITORING WELL LOCATION (AECOM, 2011)
- APPROXIMATE SOIL BORING LOCATION FROM 2012 SHALLOW SOIL INVESTIGATION
- FORMER GRAVEL STOCKPILE
- SITE BOUNDARY
- ONE OR MORE OF THE SOIL CONCENTRATIONS 0-5 FT BGS EXCEEDS SFRWQCB ESL
- ONE OR MORE OF THE SOIL CONCENTRATIONS 9-10 FT BGS EXCEEDS SFRWQCB ESL
- APPROXIMATE EXTENT OF PROPOSED EXCAVATION AREA TO 5 FT BGS
- APPROXIMATE EXTENT OF PROPOSED EXCAVATION AREA TO 8 FT BGS

TPHg	TOTAL PETROLEUM HYDROCARBON AS GASOLINE
TPHd	TOTAL PETROLEUM HYDROCARBON AS DIESEL
TPHo	TOTAL PETROLEUM HYDROCARBON AS OIL
BENZ	BENZENE
FT	FEET
<5.0	NOT DETECTED ABOVE THE LABORATORY REPORTING LIMIT INDICATED

NOTES:
ALL TOTAL PETROLEUM HYDROCARBON RESULTS ARE IN MILLIGRAMS PER KILOGRAM (mg/kg).

BENZENE RESULTS IN MICROGRAMS PER KILOGRAM (µg/kg).

BENZENE CONCENTRATIONS EXCEEDING MAY 2013 SAN FRANCISCO BAY REGIONAL WATER QUALITY CONTROL BOARD (SFRWQCB) ENVIRONMENTAL SCREENING LEVEL (ESL) of 3,700 µg/kg TEXT BOXES HIGHLIGHTED IN **YELLOW**.

TPHg AND TPHd CONCENTRATIONS EXCEEDING SFRWQCB ESLs OF 4,000 mg/kg AND 1,100 mg/kg, RESPECTIVELY TEXT BOXES HIGHLIGHTED IN **GREEN**.

TPHo CONCENTRATIONS EXCEEDING SFRWQCB ESL OF 100,000 mg/kg TEXT BOXES HIGHLIGHTED IN **BLUE**.

SITE SPECIFIC
RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your Application **(A/N 567206)** for the excavation and handling of VOC-contaminated soil **at 21611 SOUTH PERRY STREET, CARSON, CA 90745.** In accordance with Rule 1166 (c), this plan is required prior to commencing excavation of any underground storage tank or transfer piping which has previously been used to store or transfer volatile organic compounds (VOC) and during the excavation, handling, or storage of VOC-contaminated soils.
The rights and privileges granted through the issuance of this plan are restricted exclusively to the plan holder to whom it was issued, and are non-transferable, even with the written or expressed consent of the plan holder listed above. No other excavation plan issued by the SCAQMD can be used at this site.

This plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the SCAQMD and is subject to the following conditions.

RULE 1166 CONDITIONS:

SECTION I – GENERAL REQUIREMENTS

1. THIS EXCAVATION PLAN SHALL EXPIRE **AUGUST 13, 2015.**

2. A SIGNED COPY OF THIS PLAN SHALL BE PRESENT AT THE EXCAVATION SITE AT ALL TIMES AND SHALL BE MADE AVAILABLE TO SCAQMD PERSONNEL UPON REQUEST.

3. THIS PLAN IS NOT VALID FOR THE EXCAVATION OF VOC CONTAMINATED SOILS AT LANDFILLS OR SITES USED FOR DISPOSAL OF REFUSE OR OTHER TYPES OF WASTE.

4. THIS PLAN SHALL NOT BE USED IN CONJUNCTION WITH ANY ON SITE TREATMENT PROCESS, WITHOUT ADDITIONAL EVALUATION BY THE SCAQMD. THIS PLAN DOES NOT ALLOW THE TREATMENT OF VOC-CONTAMINATED SOIL BY THERMAL, CHEMICAL, OR MECHANICAL PROCESSES. ANY OF THE ABOVE TREATMENT PROCESSES REQUIRES A PERMIT TO OPERATE FROM THE SCAQMD.

5. THE TOTAL QUANTITY OF VOC CONTAMINATED SOIL EXCAVATED UNDER THIS PLAN SHALL NOT EXCEED 15,000 CUBIC YARDS. AT NO TIME SHALL THE TOTAL QUANTITY OF VOC CONTAMINATED SOIL STOCKPILED AT THIS SITE EXCEED 1,000 CUBIC YARDS.

6. THE SCAQMD SHALL BE IMMEDIATELY NOTIFIED OF ANY COMPLAINTS RECEIVED AS A RESULT OF ACTIVITIES CONDUCTED UNDER THIS PLAN. SUCH NOTIFICATION SHALL INCLUDE THE NATURE OF THE COMPLAINT, NUMBER OF COMPLAINANTS, COMPLAINANT NAME, ADDRESS, PHONE NUMBER, ETC., AND THE ACTION TAKEN BY THE PLAN HOLDER TO MITIGATE THE SOURCE OF THE COMPLAINT.

7. DURING EACH STEP OF THE PROCESS UP TO AND INCLUDING THE REMOVAL AND DISPOSAL PROCESS, ALL PRECAUTIONS AND MEASURES SHALL BE TAKEN TO MINIMIZE THE RELEASE OF VOC, ODOR AND DUST. THIS INCLUDES BUT IS NOT LIMITED TO:

   A) THE USE OF ADDITIONAL PLASTIC SHEETING OR SUPPRESSANTS ON EXPOSED SOIL SURFACES & WORK AREAS,
   B) MAINTAINING PAVED PUBLIC STREETS FREE OF SOIL DEPOSITS, AND
   C) OPERATING SUCH THAT VOC SOIL SHALL NOT BE SPREAD ON-SITE OR OFF-SITE; AND NOT PERFORMING ANY UNNECESSARY MOVEMENT OR AGITATION OF SOIL, INCLUDING THE RESHAPING OR RELOCATION OF STOCKPILES, THAT MAY CAUSE THE UNCONTROLLED EVAPORATION OF VOCs INTO THE ATMOSPHERE.

8. FOR THE PURPOSES OF RULE 1166 AND THIS PLAN, SOIL MEASURED PURSUANT TO RULE 1166 AS VOC CONTAMINATED SOIL, IS CONSIDERED AS VOC CONTAMINATED SOIL FROM THE TIME OF MEASUREMENT ONWARD, UNTIL THE SOIL IS TREATED PURSUANT TO AN APPROVED SCAQMD TREATMENT PROCESS.

SECTION II – PRIOR TO EXCAVATION

9.

A) AT LEAST 24 HOURS PRIOR TO COMMENCING EXCAVATION OR GRADING OF SOIL AT THE SITE, THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED OF THE EXCAVATION BY FAX USING A FORM APPROVED BY THE EXECUTIVE OFFICER WHICH IS FULLY COMPLETED AND INCLUDING, THE NAME OF THE COMPANY PERFORMING THE EXCAVATION, AND THE APPLICATION NUMBER LISTED ON THIS MITIGATION PLAN. THE NOTIFICATION SHALL BE MADE BY FAXING THE NOTIFICATION FORM AT (909) 396-3342. FAX NOTIFICATIONS WILL RECEIVE A REFERENCE NUMBER BY RETURN FAX OR CAN BE OBTAINED REFERENCING THE FAX NOTIFICATION BY PHONE TUESDAY THROUGH FRIDAY DURING BUSINESS HOURS AT 909 396-2326. THE REFERENCE NUMBER SHALL BE RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT.

REFERENCE NO: 567206 **NOTIFICATION DATE:** 8/27/14

B) AT LEAST 24 HOURS PRIOR TO COMMENCING EXCAVATION OR GRADING OF SOIL AT THE SITE, ALL SENSITIVE RECEPTORS WITHIN 1,000 FEET FROM THE SITE SHALL BE NOTIFIED OF THE EXCAVATION BY LETTER USING A FORMAT APPROVED BY THE EXECUTIVE OFFICER WHICH INCLUDES THE NAME, ADDRESS AND PHONE NUMBER OF THE COMPANY PERFORMING THE EXCAVATION, THE DURATION OF THE EXCAVATION AND THE SCAQMD COMPLAINT HOTLINE NUMBER (909) 288-7664.

10. COMPLETE VERIFICATION INFORMATION IN CONDITION NO. 28 AND OBTAIN REQUIRED SIGNATURES, PRIOR TO COMMENCING EXCAVATION.

11. AN ORGANIC VAPOR ANALYZER (OVA) SHALL BE ON SITE AT ALL TIMES. THE OVA SHALL BE MAINTAINED IN GOOD WORKING ORDER AT ALL TIMES. AND SHALL BE CALIBRATED BY THE MANUFACTURER AT LEAST ONCE EVERY THREE MONTHS. THE CALIBRATION OF THE OVA SHALL BE VERIFIED USING CERTIFIED CALIBRATION GAS AT THE BEGINNING OF EACH WORKING DAY WITH THE PROCEDURES SPECIFIED BY THE MANUFACTURER. IF A CALIBRATION GAS OTHER THAN HEXANE IS USED, EACH MEASURED READING SHALL BE CORRELATED TO AND EXPRESSED AS HEXANE, USING EQUIVALENCY FACTORS PROVIDED BY THE MANUFACTURER. IN THE EVENT THAT INCONSISTENT OR ERRATIC READINGS ARE EXPERIENCED, OR THE OVA BECOMES OTHERWISE INOPERABLE, ALL EXCAVATION ACTIVITIES WILL CEASE UNTIL THE OVA IS REPAIRED OR REPLACED.

SECTION III – MONITORING

12. ALL MONITORING SHALL BE CONDUCTED AT A DISTANCE NO MORE THAN 3 INCHES ABOVE THE SOIL SURFACE USING AN OVA DESCRIBED IN CONDITION NO. 11 ABOVE. MONITORING SHALL BE INITIALLY CONDUCTED AT A MINIMUM FREQUENCY OF ONE READING EVERY FIFTEEN MINUTES IN THE AREAS WHERE VOC CONTAMINATION IS EXPECTED AS PER THE ATTACHED MAP WITH THE PLAN. UPON DETECTION OF VOC CONTAMINATION, MONITORING SHALL BE CONDUCTED AT A MINIMUM OF ONE READING FOR EVERY FIVE CUBIC YARDS EXCAVATED FOR ANY AREA ON THE SITE. ALL READINGS SHALL BE TAKEN NO LATER THEN THREE (3) MINUTES AFTER EACH LOAD OF SOIL IS EXCAVATED.

13. ALL MONITORING SHALL BE CONDUCTED BY TRAINED PERSONNEL WHO ARE PROFICIENT IN THE USE OF THE HYDROCARBON MONITOR SELECTED FOR USE AT THIS SITE.

14. WRITTEN RECORDS OF OVA MONITORING AND CALIBRATIONS REQUIRED ABOVE SHALL BE KEPT IN A FORMAT APPROVED BY THE SCAQMD. THE APPROVED FORMAT IS INCLUDED ON PAGE 11 OF THIS PLAN. THE CERTIFICATION ON ALL RECORDS SHALL BE SIGNED AND DATED ON THE DAY THE MEASUREMENTS ARE OBSERVED.

15. UPON DETECTION OF VOC CONTAMINATED SOIL (READINGS 50 PPM OR GREATER), THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED WITHIN 24 HOURS OF THE FIRST DETECTION OF VOC CONTAMINATION. THE NOTIFICATION SHALL BE MADE BY FAXING THE NOTIFICATION FORM TO (909) 396-3342 OR CALLING (909) 396-2326. A REFERENCE NUMBER WILL BE FAXED BACK OR WILL BE ISSUED WHEN THE PHONE NOTIFICATION IS RECEIVED. ALL PHONE NOTIFICATIONS SHALL BE FOLLOWED BY MAILING THE NOTIFICATION FORM TO THE DISTRICT POSTMARKED WITHIN 48 HOURS. THE REFERENCE NUMBER WILL BE RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT.

REFERENCE NO:---374127--- NOTIFICATION DATE:---09/10/2014---

SECTION IV –HANDLING & STORAGE

16. ALL VOC-CONTAMINATED SOIL BELOW 1000 PPM SHALL BE STOCKPILED, COVERED WITH PLASTIC SHEETING AND STORED SEPARATELY FROM NON-VOC-CONTAMINATED SOIL, OR IMMEDIATELY TRANSPORTED TO A TREATMENT FACILITY. CONTAMINATED SOIL ONCE EXCAVATED AND STOCKPILED WILL BE CONSIDERED CONTAMINATED AT ALL TIMES AND CANNOT BE BACKFILLED UNLESS TREATED TO LESS THAN 50 PPM LEVELS WITH PRIOR SCAQMD APPROVAL AND SCAQMD PERMITTED EQUIPMENT.

17. A VOC CONTAMINATED STOCKPILE SHALL NOT CONTAIN MORE THAN 250 CUBIC YARDS OF SOIL.

18. IF THE OVA MEASUREMENT SPECIFIED IN CONDITION NO. 11 IS GREATER THAN 50 PPMV, BUT LESS THAN 1000 PPM,

    A) THE AFFECTED WORK AREA AND LOAD OF SOIL SHALL BE SPRAYED WITH WATER AND/OR APPROVED VAPOR SUPPRESSANT.

B) CONTAMINATED SOIL IN STOCKPILES SHALL BE COVERED WITH PLASTIC SHEETING WHICH OVERLAP A MINIMUM OF TWENTY FOUR INCHES AND ARE SECURED SO THAT NO PORTION OF THE CONTAMINATED SOIL IS EXPOSED TO THE ATMOSPHERE. IN THE COURSE OF HANDLING THE STOCKPILE, ONLY THE WORKING FACE OF THE STOCKPILE MAY BE UNCOVERED.

19. IF THE SOIL OVA MEASUREMENT EQUALS OR IS GREATER THAN 1000 PPMV, NOTIFY THE DISTRICT IMMEDIATELY OR WITHIN ONE HOUR OF DETECTION, AND,

374496 09/11/2014

A) THE AFFECTED SOIL AND WORKING AREA SHALL BE IMMEDIATELY SPRAYED WITH WATER OR AN APPROVED VAPOR SUPPRESSANT, AND EITHER:

i) THE CONTAMINATED SOIL EXCAVATED SHALL BE IMMEDIATELY PLACED IN SCAQMD APPROVED SEALED CONTAINERS EQUIPPED WITH VAPOR TIGHT LIDS, OR,

ii) THE SOIL SHALL BE DIRECTLY LOADED IN TRUCKS, SPRAYED WITH ADDITIONAL WATER OR APPROVED VAPOR SUPPRESSANTS, COVERED, AND TRANSPORTED IMMEDIATELY OFF SITE TO AN APPROVED TREATMENT FACILITY, OR,

B) HANDLED BY ALTERNATIVE STORAGE METHODS WITH PRIOR WRITTEN APPROVAL FROM THE SCAQMD.

20. DURING EXCAVATION, THE EXPOSED VOC CONTAMINATED SOIL SHALL BE RESTRICTED TO THE IMMEDIATE WORKING AREA OF THE STOCKPILE ONLY. ALL OTHER PORTIONS OF THE STOCKPILE SHALL BE COVERED WITH PLASTIC SHEETING, WITH SEAMS WHICH OVERLAP A MINIMUM OF TWENTY-FOUR (24) INCHES AND ARE SECURED WITH DUCT TAPE. ALL EXPOSED VOC-CONTAMINATED SOIL SURFACES (WORK FACE) SHALL BE KEPT MOIST WITH WATER OR OTHER APPROVED SUPPRESSANTS AT ALL TIMES, AND SHALL BE RE-COVERED DURING PERIODS OF INACTIVITY LONGER THAN ONE (1) HOUR. AT THE END OF EACH WORKING DAY, ALL STOCKPILES SHALL BE COMPLETELY COVERED AND SECURELY ANCHORED TO PREVENT ANY EXPOSURE OF SOIL TO THE ATMOSPHERE.

21. ONCE COVERED WITH PLASTIC SHEETING, STOCKPILES SHALL REMAIN COVERED AND UNDISTURBED UNTIL REMOVED FROM THE SITE.

22. DAILY INSPECTIONS SHALL BE CONDUCTED OF ALL COVERED VOC-CONTAMINATED STOCKPILES TO ENSURE THE INTEGRITY OF THE PLASTIC COVER. SUCH INSPECTIONS SHALL INCLUDE A VISUAL INSPECTION OF ALL SEAMS AND PLASTIC COVER SURFACES. ANY HOLES, TEARS OR ANY OTHER POTENTIAL SOURCES OF FUGITIVE VOC EMISSIONS SHALL BE REPAIRED IMMEDIATELY. DAILY RECORDS SHALL BE MAINTAINED TO ENSURE COMPLIANCE WITH THIS CONDITION.

SECTION V –SOIL REMOVAL AND DISPOSAL

23. ALL VOC-CONTAMINATED SOIL SHALL BE REMOVED FROM THE SITE WITHIN THIRTY (30) DAYS OF ITS EXCAVATION.

24. ALL VOC-CONTAMINATED SOIL REMOVED FROM THE SITE SHALL COMPLY WITH THE FOLLOWING:

    A) BE TRANSPORTED TO AN APPROVED TREATMENT/DISPOSAL FACILITY. IT SHALL BE THE RESPONSIBILITY OF THE PLAN HOLDER TO ENSURE THAT THE RECEIVING TREATMENT/DISPOSAL FACILITY HAS RECEIVED APPROVAL FROM THE APPROPRIATE ENVIRONMENTAL OVERSIGHT AGENCIES TO HANDLE AND TREAT VOC CONTAMINATED SOILS.

    B) WHEN LOADING IS COMPLETED AND DURING TRANSPORTATION, NO EXCAVATED MATERIAL SHALL EXTEND ABOVE THE SIDES OR REAR OF THE TRUCK OR TRAILER.

    C) PRIOR TO COVERING/TARPING, LOADED CONTAMINATED SOIL SHALL BE TREATED BY SPRAYING WITH WATER OR DUST SUPPRESSANTS.

    D) THE TRUCK OR TRAILER SHALL BE COMPLETELY COVERED/TARPED PRIOR TO LEAVING THE SITE TO PREVENT PARTICULATE EMISSIONS TO THE ATMOSPHERE.

    E) THE EXTERIOR OF THE TRUCKS (INCLUDING THE TIRES) SHALL BE CLEANED OFF PRIOR TO THE TRUCKS LEAVING THE EXCAVATION SITE.

SECTION VI – RECORDS AND REPORTING

25. A WRITTEN REPORT SHALL BE GENERATED WHICH INCLUDES:

    A) THE FACILITY SELECTED TO TREAT THE VOC-CONTAMINATED SOIL, QUANTITY OF SOIL REMOVED FROM SITE, STATUS OF EXCAVATION PIT, AND ANY VOC CONTAMINATED SOIL REMAINING ON SITE.

    B) A BRIEF SUMMARY INDICATING IF ADDITIONAL CLEAN UP EFFORTS ARE NECESSARY, THE ADDITIONAL QUANTITY OF VOC CONTAMINATED SOILS TO BE EXCAVATED AND THE PROJECTED SCHEDULE OF THE EXCAVATION.

26. RECORDS OF TREATMENT/DISPOSAL SHALL BE MAINTAINED FOR ALL VOC-CONTAMINATED SOIL REMOVED FROM THIS SITE. SUCH RECORDS SHALL BE CLEARLY LABELED **"SCAQMD RULE 1166-VOC CONTAMINATED SOIL"** AND SHALL INCLUDE THE IDENTIFICATION AND THE LOCATION OF, 1) THE GENERATOR, 2) TRANSPORTER AND 3) RECEIVING FACILITY. IN ADDITION, SUCH RECORDS SHALL BE SIGNED AND DATED BY EACH OF THE ABOVE PARTIES

INDICATING RECEIPT OR RELINQUISHMENT OF THE VOC-CONTAMINATED SOIL AT THE TIME CUSTODY IS TRANSFERRED.

27. WITHIN FORTY (40) DAYS OF INITIAL DETECTION OF VOC-CONTAMINATION, THE WRITTEN RECORDS UNDER CONDITION NO. 22 AND WITHIN THIRTY (30) DAYS OF EXCAVATION PROJECT COMPLETION RECORDS UNDER CONDITION NOS. 14, 22, AND 25 SHALL BE SUBMITTED TO THE SCAQMD AT THE FOLLOWING ADDRESS.

SOUTH COAST AIR QUALITY MGMT DISTRICT
ENGINEERING & COMPLIANCE DIVISION.
RULE 1166 TOXICS AND WASTE MANAGEMENT SECTION
21865 COPLEY DR.
DIAMOND BAR, CA. 91765-4182

SECTION VII – SPECIAL CONDITIONS

A. IN THE EVENT OF THREE OR MORE COMPLAINTS IN ONE DAY BY SEPARATE INDIVIDUALS, OR BY BUSINESSES OR SCHOOLS ON BEHALF OF THREE OR MORE INDIVIDUALS, WHICH COMPLAINTS ARE VERIFIED BY SCAQMD INSPECTORS AS ORIGINATING FROM THE PROJECT SITE, THE OPERATOR SHALL SUSPEND EXCAVATION ACTIVITIES AND SUBMIT TO THE SCAQMD FOR APPROVAL FURTHER MITIGATION MEASURES DESIGNED TO REDUCE EMISSIONS CAUSING THE COMPLAINTS. EXCAVATION ACTIVITIES SHALL NOT RESUME UNTIL THE MITIGATION MEASURES ARE APPROVED BY THE SCAQMD IN WRITING AS AN ADDENDUM TO THIS PLAN.

B. TOTAL NUMBER OF ROUND TRIP TRUCK MILES DRIVEN PER DAY FROM THE DISPOSAL SITES IN THE SCAQMD BASIN SHALL NOT BE MORE THAN 8,600.

- APPLICANT SHALL RETAIN THE COPIES OF THE MANIFESTS GENERATED AT THE EXCAVATION SITE TO SHOW THE LOCATIONS WHERE THE EXCAVATED MATERIAL WAS TAKEN TO.

- WHILE CALCULATING THE MILES DRIVEN IN SCAQMD JURISDICTION, GUIDANCE TABLE SHOWN BELOW SHALL BE USED.

- 80% OF THE TRUCKING MILES DRIVEN TO DISPOSE EXCAVATED MATERIAL ON ANY DAY SHALL BE FROM TRUCK WITH ENGINE MODEL YEAR 2010 OR HIGHER. APPLICANT SHALL KEEP RECORDS OF THE ENGINE MODEL YEARS OF THE TRUCKS USED FOR HAULING SOIL OFFSITE ON DAILY BASIS.

SITE NAME	ROUND TRIP DISTANCE IN SCAQMD BASIN	MAXIMUM NO. OF ROUND TRIPS PER DAY IF GOING TO ONLY ONE SITE (MENTIONED IN COLUMN ON THE LEFT)	
CLEAN HARBORS, MCKITTRICK, CA	100	86	TOTAL DISTANCE TRAVELLED IN SCAQMD BASIN NEEDS TO BE LESS THAN 8,600 MILES ON ANY GIVEN DAY.
CHIQUITA CANYON LANDFILL, CASTAIC, CA	100	86	
US ECOLOGY, BEATTY, NV	160	54	
LA PAZ COUNTY LANDFILL, PARKER, AZ	360	24	
WASTE MANAGEMENT/TRS 1211 WEST GLADSTONE STREET AZUSA, CA 91702	68	126	
CHEMICAL WASTE MANAGEMENT 35251 OLD SKYLINE ROAD KETTLEMEN CITY, CA 93239	96	90	
SOIL SAFE, INC. 12328 HIBISCUS AVENUE ADELANTO, CA 92301	160	54	
SOUTH YUMA COUNTY LANDFILL 19536 S AVE #1E, YUMA, AZ	104 (via I-5 & I-8)	83	

C. ALL METAL CONTAMINATED EXCAVATED MATERIAL STOCKPILED SHALL BE KEPT SUFFICIENTLY DAMP TO PREVENT THE POSSIBLE RELEASE OF FUGITIVE EMISSIONS AND SHALL BE COVERED WITH APPROVED HEAVY-DUTY PLASTIC SHEETING (VISQUEEN) AND ALSO COVERED AT THE END OF EACH WORKING DAY. PLASTIC SHEETING MUST BE SECURED.

D. ALL MATERIALS THAT ARE LISTED AS HAZARDOUS BY A FEDERAL OR STATE AGENCY SHALL BE CONSIDERED "HAZARDOUS MATERIALS" FOR THE PURPOSE OF THIS PERMIT.

E. ALL HAZARDOUS EXCAVATED MATERIAL SHALL BE TRANSPORTED IN SUCH A MANNER AS TO PREVENT ANY EMISSIONS OF HAZARDOUS MATERIALS.

F. ALL HAZARDOUS MATERIALS SHALL BE TRANSPORTED IN CONTAINERS CLEARLY MANIFESTED AS TO THE TYPE OF MATERIAL CONTAINED AND WHAT PROCEDURES SHOULD BE FOLLOWED IN CASE OF ACCIDENTAL SPILLS.

G. EXCAVATED LIQUID HAZARDOUS MATERIALS WITH THE POTENTIAL TO CAUSE AIR EMISSIONS SHALL BE ENCAPSULATED OR ENCLOSED IN CONTAINERS WITH SEALED LIDS BEFORE LOADING INTO THE TRANSPORT VEHICLES.

28. THIS PLAN IS NOT VALID UNTIL ALL PARTIES HAVE REVIEWED AND SIGNED THE VERIFICATION STATEMENT BELOW.

Site Name: Carson Air Harbor		Type of Business:
Address: 21611 S. Perry St.	City: Carson	Zip: 90745
Responsible Party (Owner/Operator): Equilon Enterprises dba SOPUS		Phone:
Address: 20945 S. Wilmington Ave.	City: Carson	Zip: 90810

I CERTIFY THAT I HAVE REVIEWED AND UNDERSTAND THE CONDITIONS CONTAINED WITHIN THIS PLAN. IN SIGNING BELOW, I ACKNOWLEDGE THAT UNDER THE PROVISIONS OF RULE 1166, I CAN BE HELD RESPONSIBLE FOR THE REQUIREMENTS SET FORTH IN THIS PLAN.

Responsible Party: Joe Lentini	Responsible Party Signature	Date Signed: 9/9/14
General Contractor: Scott Anderson	General Contractor Signature	Date Signed: 9/9/14
Excavation Contractor: Scott Anderson	Excavation Contractor Signature	Date Signed: 9/5/14
Environmental Consultant: Robert Ponce (URS)	Environmental Consultant Signature	Date Signed: 09/08/14

DEFINITIONS

Excavation	Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.
Organic Vapor Analyzer (OVA)	For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV

Re: **Acceptance of Non-hazardous soil "Shell Carson CAH"**

Soil safe has reviewed and approved your soil profile "SHELL CARSON CAH", approval number 43254. We will print the manifests and ship them to you today.
Soil Safes operating hours are 8:00 am to 5:00 pm Monday through Friday. Please call 24 hours before shipment date to be placed on the schedule. If you need Soil Safe to modify our operating hours to accept soil, please make arrangements at least 24 hours in advance.

If you have any questions or concerns please call.

Thank you,

Joe Provansal

APPENDIX F

LARWQCB APPROVAL LETTER FOR CRUSHED CONCRETE REUSE

September 16, 2014

Mr. Joseph Lentini
Environmental Services
Shell Oil Products US
20945 S. Wilmington Ave.
Carson, CA 90810

SUBJECT: APPROVAL OF REUSE OF CRUSHED CONCRETE

SITE: FORMER CARSON AIR HARBOR SITE
21611 PERRY STREET, CARSON, CALIFORNIA (SCP NO. 0490C)

Dear Mr. Lentini:

The subject Site was occupied by several industrial/commercial tenants since the early 1960s, including Plan Hold Corporation; Picket Industries; Air Harbor Machine Company, Inc.; Focus Engineering Services; Aire RV and Sports Den; and Carson Trailer, Inc. The last tenant vacated the property in December 2009 and building demolition occurred in May 2011. All structures, walls, footings, foundations, and known subsurface features have been removed and the Site is currently vacant. The Site is owned by Shell Oil Products US (SOPUS). Environmental assessment at the Site has been performed under the oversight of the Regional Board Site Cleanup Program. Contaminants of concern include petroleum hydrocarbons sourced from a former septic system that was converted to a waste oil tank and from petroleum pipelines within Carson Street and Perry Avenue adjacent to the Site. On April 21, 2014, the Regional Board approved a soil excavation work plan for the Site. The approval was contingent upon a commercial/industrial land use deed covenant being recorded for the property prior to the issuance of any No Further Action (NFA) determination being made by the Regional Board.

The decommissioning of facilities at the Site generated approximately 2,700 cubic yards of crushed concrete that has been stockpiled on-Site. Shell Oil intends to use the crushed concrete, mixed with clean import fill, as backfill in the areas that will undergo remedial excavation and as temporary road material during excavation activities. According to data submitted by URS Corporation on behalf of SOPUS (see attached Table 1), maximum detections of total petroleum hydrocarbons as diesel (TPH-D) and as oil (TPH-O) were detected on crushed concrete samples at 510 mg/kg TPH-D and 1,200 mg/kg TPH-O. Screening levels for excavation approved by the Regional Board in our April 21, 2014, correspondence were above these values at 1,100 mg/kg TPH-D and 100,000 mg/kg TPH-O. Polycyclic aromatic hydrocarbons (PAHs) and organochlorine pesticides were also detected, but were at least one order of magnitude below Environmental Screening Levels published by the San Francisco Bay Regional Water Quality Control Board.

Regional Board staff has reviewed the information provided and determined that the proposed reuse of crushed concrete waste at the Site is not likely to impact surface or ground water resources, with

assurance from URS Corporation and Shell Oil Products US that best management practices will be followed during construction activities. Waste discharge requirements for the proposed reuse of crushed concrete waste are therefore not required.

If you have any questions, please contact Greg Bishop, Engineering Geologist, at the Regional Board, at (213) 576-6727, or email to greg.bishop@waterboards.ca.gov.

Sincerely,

Samuel Unger

Samuel Unger, P.E.
Executive Officer

Notes:

The concrete samples were also analyzed for Title 22 metals by U.S. Environmental Protection Agency (USEPA) Method 6010B/7471A. The detected concentrations were low and below residential screening levels (or background for arsenic).

* Screening levels are the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers (Table K-2. Direct Exposure Soil Screening Levels, Commercial/Industrial Worker Exposure Scenario; December 2013)

TPH - Total Petroleum Hydrocarbons

TPH as Gasoline by USEPA Method 5035/8015B (M)

TPH as Diesel by USEPA Method 8015B

TPH as Motor Oil by USEPA Method 8015B (M)

Organochlorine Pesticides (OCPs) by USEPA Method 8081A

Polycyclic Aromatic Hydrocarbons (PAHs) by USEPA Method 8270C Selected Ion Monitoring (SIM)

mg/kg - milligrams per kilogram

µg/kg - micrograms per kilogram

ND - Not detected above the laboratory reporting limit

HD - The chromatographic pattern was inconsistent with the profile of the reference fuel standard.

APPENDIX G

LARWQCB NO FURTHER ACTION LETTER FOR SOIL

December 14, 2015

Mr. Joseph Lentini
Shell Oil Products US
Environmental Services
20945 S. Wilmington Avenue
Carson, CA 90810

SUBJECT: NO FURTHER ACTION FOR SOIL

CASE/SITE: FORMER CARSON AIR HARBOR, 21611 PERRY STREET, CARSON (SCP CASE NO. 0490C)

Dear Mr. Lentini:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) is the state agency with primary responsibility for the protection of groundwater and surface water quality within major portions of Los Angeles and Ventura counties. To accomplish this, the Regional Board oversees the investigation and cleanup of discharges of waste that may affect the quality of waters of the state as authorized by the Porter-Cologne Water Quality Control Act (California Water Code [CWC], Division 7).

Document Review

Regional Board staff has reviewed the site investigation reports, prepared by your environmental consultant, and other relevant information regarding the Carson Air Harbor site. Recent documents include:

1. *Vadose Zone Supplemental Soil Investigation Report*, Carson Air Harbor, Carson, California, dated February 19, 2014, prepared by URS Corporation;
2. *Soil Excavation Workplan*, Carson Air Harbor, 21611 South Perry Street, Carson, California, dated April 15, 2014, prepared by URS Corporation; and
3. *Soil Excavation Report*, Carson Air Harbor, 21611 South Perry Street, Carson, California, dated December 15, 2014, prepared by URS Corporation

Remedial excavation activities at the Site have resulted in the removal of the wastes in soil above established cleanup goals to assure protection of human health. Groundwater beneath the site remains impacted with petroleum hydrocarbons. Groundwater matters have been merged into Regional Board Case No. 0490B.

Site History

Prior to development for industrial/commercial use in the early 1960s, the former Carson Air Harbor (CAH) property was farm land. The last tenant vacated the property in December 2009 and building demolition occurred in May 2011.

A septic tank was previously present at the Site adjacent to the southern boundary of the warehouse building. This tank was used by a former owner and/or operator during the 1960s-1970s as an underground storage tank (UST) for waste oil. The converted septic tank/UST was removed in May 1990. Following its removal, soil samples were collected from the excavation pit with petroleum hydrocarbons and chlorinated volatile organic compounds (VOCs) detected.

In early 2002, the tenant complained of "sewer like" odors in a portion of the building. This prompted additional assessment of environmental conditions at the Site. Elevated methane and benzene were detected in soil vapor near the former septic tank and UST; however, no significant methane or VOC concentrations were impacting adjacent residences to the north. In January 2003, a limited vapor collection and treatment system was installed to mitigate the potential for vapor intrusion of methane and VOCs to the area immediately beneath the building.

In 2014, shallow soil impacts were excavated at the site to cleanup goals intended to protect commercial/industrial workers from direct exposure to soil. A deed restriction has been filed to ensure that additional controls, such as a vapor barrier, will be placed on the property to limit potential exposure to remaining impacted soil and groundwater.

Covenant and Environmental Restriction

Soil has been excavated to San Francisco Bay Regional Water Quality Control Board (SFRWQCB) Environmental Screening Levels (ESLs) for the protection of commercial/industrial workers from direct exposure to soil. As part of this commercial/industrial soil closure, a Covenant and Environmental Restriction has been executed for the property to limit use of the site to commercial and industrial land use applications to protect human health and the environment. The Covenant and Environmental Restriction will remain active for the site until it is demonstrated to the satisfaction of this Regional Board that any residual wastes at the site do not pose a risk to human health or water quality, based on other uses of the site.

Notice of Opportunity to Comment

A Notice of Opportunity to Comment on the proposed no further action was provided to you and others on September 25, 2015, inviting comments. No responses were received by the Regional Board within the comment period ending October 26, 2015.

No Further Action Determination

Based upon information provided to the Regional Board, and with the provision that the information was accurate and representative of site conditions, the Regional Board requires no further action (NFA) be taken at the site regarding soil impacts at the site, at this time. However, the site owner/operator

must notify the Regional Board immediately if additional waste in soil and/or groundwater is encountered at the site.

Groundwater beneath the site remains impacted. Groundwater matters have been merged into Regional Board Case No. 0490B.

Cost Recovery Billing and Invoices

Please note that Regional Board staff oversight charges for work associated with this NFA letter and case review and evaluation package will be billed on the invoices for 3rd and 4th quarters of 2015, in the same manner as previously billed.

The jurisdiction requirements of other agencies, such as the United States Environmental Protection Agency, are not affected by the Regional Board's issuance of a NFA letter at the Site. Such agencies may choose to make their own determination concerning this site.

We would like to take this opportunity to thank you for your full cooperation with the Regional Board during the course of the site assessment. Should you have any questions regarding this matter, please contact Mr. Greg Bishop at (213) 576-6727 or via e-mail at greg.bishop@waterboards.ca.gov.

Sincerely,

Samuel Unger

Samuel Unger, P.E.
Executive Officer

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail(as Nov 16 2020)

RB Case No: 0490C
Local Case No:
Begin Date: 1/1/2001
Stop Method:
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Local Agency:
Potential COC:
Potential Media of Concern:
How Discovered:
How Discovered Description:
Stop Description:
Calwater Watershed Name: Dominguez Channel (411.01)
DWR GW Subbasin Name: Coastal Plain Of Los Angeles - West Coast (4-011.03)
Disadvantaged Community:
CUF Case: NO
Case Worker:
File Location: Regional Board
Site History:

Site had several industrial facilities. On-site sources included a former septic system that had been converted into a waste oil tank. The site has been delineated and demonstrated to have some chlorinated solvent impacts but also petroleum impacts. The chlorinated solvent impacts are believed to be sourced from the former septic/waste-oil system. The petroleum impacts are believed to be associated with a release from pipelines in Perry Street and Carson Street adjacent to the site. On-site excavation was performed in 2015 to remove soil impacts above agreed cleanup levels. This case is closed for soil only. Groundwater issues remain. Shell has requested to merge SCP Nos. 0490A, 0490B, and 0490C (see letter dated 9/2/2015). All groundwater oversight will be completed under GeoTracker No. SLT43288286, SCP No. 0490B.

Site Type:	VOLUNTARY CLEANUP
Office:	CLEANUP CYPRESS
Past Use that Caused Contam:	NONE
Potential Media Affected:	SOIL
Potential Contamin of Concern:	

BENZENE

Site History:

The site is an approximately one acre size property currently undeveloped. Residential housing borders the property on two sides with light industrial uses adjacent to the Site near the southwestern boundary of the property. During the spring of 1996, Shell Oil Products Company (Shell Oil Company Subsidiary) was informed by the Site Owner (who was preparing for development) that some soils along Perry Street near 215th Place in the City of Carson may contain petroleum hydrocarbons. The source of the materials is unknown but may be several underground pipelines, including pipelines owned by Unocal and Pacific Pipeline, who have active pipelines, and by proponent (whose pipelines have been out of service since the early 1970s). An ongoing investigation of the groundwater is currently under RWQCB review. The proposed end land use for this Site is a City Park.

Status:	NO FURTHER ACTION
Program Type:	VOLUNTARY CLEANUP
CalEnviroScreen Score:	91-95%

Regulated Programs

EI ID: 10296610 **EI Description:** Hazardous Waste Generator

EI ID: 10296610 **EI Description:** Chemical Storage Facilities

Violations

Violation Date: 10/23/2018 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Los Angeles County Fire Department
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Notes:

Returned to compliance on 10/26/2018. OBSERVATION: Observed accumulation of liquids and debris inside the plastic secondary containment pallets holding hazardous waste drums located near the Dumpster area. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the plastic secondary containment pallets listed above have been properly cleaned.

Violation Description:

Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violations

Violation Date: 10/23/2018 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Los Angeles County Fire Department
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Notes:

Returned to compliance on 01/16/2019. OBSERVATION: The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. 2018 California Environmental Reporting System (CERS) submittal was missing/incomplete; Reviewed CERS submittals submitted on 1/6/18 and found the following to be updated; - Not using the most up-to-date form to complete facility's Consolidated Emergency Response / Contingency Plan (CER/CP); Old CER/CP form was used - please use attached Rev. 03/07/17 CER/CP form; - Missing the local unified program agency (UPA/CUPA) phone number (310-890-4317) on the CER/CP; - Missing the nearest medical facility / hospital name and phone on the CER/CP; - Missing required contents (storm and sewer drains and emergency shutoffs (e.g. water and electricity shutoffs) on facility's site map; - Incorrect selection of Federal Hazard Catefories on the Hazardous Materials and Wastes Inventory Matrix [Truncated]

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violations

Violation Date: 10/23/2018 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Los Angeles County Fire Department
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 10/26/2018. OBSERVATION: Observed the following containers containing hazardous wastes to be open at the time of inspection: - 1 x 55-gallon drum containing crushed used oil filters located by the Dumpster area was observed partially covered with a medal lid; - 2 x 5-gallon pails containing hazardous waste used oils located inside the shop and underneath a filter crusher were observed to be open; CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the containers listed above have been properly closed.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violations

Violation Date: 07/29/2015
Violation Source: CERS
Violation Program: HW
Violation Division: Los Angeles County Fire Department
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Notes:

Returned to compliance on 09/28/2015. OBSERVATION: Generator failed to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment. Observed accumulation of oil debris on the used oil filters container and on the floor around the container stored at the exterior storage area. CORRECTIVE ACTION: Owner/Operator shall immediatly maintin the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment. The Owner/Operator shall develop procedures to operate the facility in such a manner to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste [Truncated]

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment..

How Discovered Description:
Stop Description:
Calwater Watershed Name: Dominguez Channel (411.01)
DWR GW Subbasin Name: Coastal Plain Of Los Angeles - West Coast (4-011.03)
Disadvantaged Community:
Site History:
CUF Case: NO
Case Worker: JYL
File Location: Regional Board

The Site is centered around a petroleum pipeline corridor which runs underneath S. Perry Street from Shell Carson Terminal to the north to E. Carson Street near the Dominguez Channel. Shell operated eight pipelines in this area from the mid-1920s through the early 1970s. Shell abandoned all eight pipelines; two were abandoned in 1962, while six were abandoned by 1971. Other pipelines in this area include two Unocal pipelines located on the east side of S. Perry Street and one Plains All American pipeline (formerly BP/ARCO/Four Corners) on the west side of S. Perry Street. Records indicated that the Shell pipelines have been abandoned in-place per regulatory standards at the time of abandonment; however, the Plains All American pipeline is active pipeline and reportedly carries crude oil. The chemicals of concern at the Site are TPHg, BTEX, and DIPE. Historically, the Site has been managed as multiple smaller areas with separate regulatory management. The smaller areas within the Site are as follows: • S. Perry Street and Surrounding Areas (including adjacent individual residences and nearby • streets) • Former Carson Air Harbor (CAH) property • Former Alexander Catania (A/C) Parcels/Perry Street Mini Park • Sea Crest Parcels • Other Residential Properties o Lorraine Condominiums o Colony Holdings Shell and other parties have engaged in soil and groundwater assessments, monitoring, remediation, and source-management programs at the various parcels encompassing the Site since 1990. During the development of the former A/C Parcels in early 1996, visibly stained and odorous soil was identified adjacent to S. Perry Street. A release from the petroleum pipelines was suspected to be the source of the impacts. The discovery of impacts and land development led to multiple investigations and remedial activity in subsequent years. Remediation efforts have included the excavation and offsite disposal of approximately 10,800 cubic yards of soil, passive light non-aqueous phase liquid (LNAPL) removal, and operation of a soil vapor treatment system at the CAH property. Three areas of the Site (CAH, A/C Parcels, and Sea Crest Parcels) have received case closure from regulatory agencies. Institutional controls have been implemented at the CAH property that limit land use and excavation activities, prohibits groundwater use and requires engineering controls in future construction. A portion of Sea Crest Parcels has restrictions on groundwater use and excavation. The former A/C parcels has restrictions on land use, groundwater use and excavation. The Site vicinity is underlain by perched groundwater within the Bellflower aquitard which occurs in the upper 200 feet bgs. Native materials within the investigated portion of the Bellflower aquitard consist primarily of sandy to silty clays. Within the clays shallow discontinuous sand lenses which extend to 35 feet bgs are referred to as the A Zone. A relatively continuous band of sandy soils with some interbedded clay lenses is present from approximately 35 to 50 feet bgs and is referred to as the B Zone. Fine-grained soils are present below 50 feet bgs to roughly 70 feet bgs. The C Zone comprises silty sands between approximately 70 and 80 feet bgs. A Zone groundwater generally flows southwest, B Zone groundwater flows southeast, and C Zone groundwater flows northwest. The Site is adjacent to the tidally influenced, brackish, clay-lined Dominguez Channel. B and C Zone wells show tidal influence, while A Zone tidal influence is limited.

Site History:

The Site is centered around a petroleum pipeline corridor which runs underneath S. Perry Street from Shell Carson Terminal to the north to E. Carson Street near the Dominguez Channel. Shell operated eight pipelines in this area from the mid-1920s through the early 1970s. Shell abandoned all eight pipelines; two were abandoned in 1962, while six were abandoned by 1971. Other pipelines in this area include two Unocal pipelines located on the east side of S. Perry Street and one Plains All American pipeline (formerly BP/ARCO/Four Corners) on the west side of S. Perry Street. Records indicated that the Shell pipelines have been abandoned in-place per regulatory standards at the time of abandonment; however, the Plains All American pipeline is active pipeline and reportedly carries crude oil.

The chemicals of concern at the Site are TPHg, BTEX, and DIPE.

Historically, the Site has been managed as multiple smaller areas with separate regulatory management. The smaller areas within the Site are as follows:

• S. Perry Street and Surrounding Areas (including adjacent individual residences and nearby
• streets)
• Former Carson Air Harbor (CAH) property
• Former Alexander Catania (A/C) Parcels/Perry Street Mini Park
• Sea Crest Parcels
• Other Residential Properties
o Lorraine Condominiums
o Colony Holdings

Shell and other parties have engaged in soil and groundwater assessments, monitoring, remediation, and source-management programs at the various parcels encompassing the Site since 1990. During the development of the former A/C Parcels in early 1996, visibly stained and odorous soil was identified adjacent to S. Perry Street. A release from the petroleum pipelines was suspected to be the source of the impacts. The discovery of impacts and land development led to multiple investigations and remedial activity in subsequent years.

Remediation efforts have included the excavation and offsite disposal of approximately 10,800 cubic yards of soil, passive light non-aqueous phase liquid (LNAPL) removal, and operation of a soil vapor treatment system at the CAH property. Three areas of the Site (CAH, A/C Parcels, and Sea Crest

Parcels) have received case closure from regulatory agencies. Institutional controls have been implemented at the CAH property that limit land use and excavation activities, prohibits groundwater use and requires engineering controls in future construction. A portion of Sea Crest Parcels has restrictions on groundwater use and excavation. The former A/C parcels has restrictions on land use, groundwater use and excavation.

The Site vicinity is underlain by perched groundwater within the Bellflower aquitard which occurs in the upper 200 feet bgs. Native materials within the investigated portion of the Bellflower aquitard consist primarily of sandy to silty clays. Within the clays shallow discontinuous sand lenses which extend to 35 feet bgs are referred to as the A Zone. A relatively continuous band of sandy soils with some interbedded clay lenses is present from approximately 35 to 50 feet bgs and is referred to as the B Zone. Fine-grained soils are present below 50 feet bgs to roughly 70 feet bgs. The C Zone comprises silty sands between approximately 70 and 80 feet bgs. A Zone groundwater generally flows southwest, B Zone groundwater flows southeast, and C Zone groundwater flows northwest. The Site is adjacent to the tidally influenced, brackish, clay-lined Dominguez Channel. B and C Zone wells show tidal influence, while A Zone tidal influence is limited.

Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
Site Type: VOLUNTARY CLEANUP
Office: CLEANUP CYPRESS
Past Use that Caused Contam: AGRICULTURAL - LIVESTOCK
Potential Media Affected: SOIL
Site History:

The site has been proposed for housing development and DTSC is reviewing the additional site assessment workplan.

The Site is owned by Triton Diagnostics, Inc. Extensive soil, soil vapor, and groundwater sampling on the subject property has identified petroleum hydrocarbon impact along the front 4 lots that border Perry Street. According to information provided by the Proponent in the Application, the remaining back 5 lots have not been impacted. The maximum concentration of benzene detected at the Site is 5.3 milligrams per kilogram (mg/kg).

The Site consists of a half-acre parcel, located in an area, which surrounded by residential developments. This Site is currently vacant (with a native grass cover) and surrounded by a chain link fence and is currently graded for residential pad placement. Residential development is planned for the Site.

The subject property was once part of a larger agricultural land use through the 1980's. This operation was ceased and the land sold off to facilitate residential land uses.

Potential Contamin of Concern:

BENZ[A]ANTHRACENE, POLYCHLORINATED BIPHENYLS (PCBS), POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS), VOLATILE ORGANICS (8260B VOCS)

Status: CERTIFIED O&M - LAND USE RESTRICTIONS ONLY - LAND USE RESTRICTIONS

Stop Description:
Calwater Watershed Name: Dominguez Channel (411.01)
DWR GW Subbasin Name: Coastal Plain Of Los Angeles - West Coast (4-011.03)
Disadvantaged Community:
Site History:

CUF Case: NO
Case Worker: MN
File Location: Regional Board

A petroleum sheen appeared on the surface of the Dominguez Channel, approximately 400 feet south of Carson Street in Carson, in January 2011. Investigation is mostly complete. LNAPL is being recovered in wells adjacent to the channel to prevent a recurrence of the sheen. Additional remediation measure are being explored.

File Location: REGIONAL BOARD
Composting Method:

Future Land Use:
Cleanup Oversight Agencies: LOS ANGELES RWQCB (REGION 4) (LEAD) - CASE #: 1264
CASEWORKER: MAJD NIMA
Site History:

A petroleum sheen appeared on the surface of the Dominguez Channel, approximately 400 feet south of Carson Street in Carson, in January 2011. Investigation is mostly complete. LNAPL is being recovered in wells adjacent to the channel to prevent a recurrence of the sheen. Additional remediation measure are being explored.

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail(as Nov 16 2020)

RB Case No: 1258 **CUF Case:** NO
Local Case No: **Case Worker:** PC
Begin Date: 4/15/2011 **File Location:**
Stop Method:
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Local Agency:
Potential COC: Diesel, Gasoline, Other Petroleum
Potential Media of Concern: Contaminated Surface / Structure, Other Groundwater (uses other than drinking water), Sediments, Soil, Soil Vapor, Surface water, Under Investigation
How Discovered:
How Discovered Description: Visible sheen on water surface in Dominguez Channel.
Stop Description:
Calwater Watershed Name: Dominguez Channel (411.01)
DWR GW Subbasin Name: Coastal Plain Of Los Angeles - West Coast (4-011.03)
Disadvantaged Community:
Site History:

Investigation and containment of LNAPL within the Dominguez Channel, approximately 400 feet south of Carson Street in Carson, California.

Violation Description:

Failure to submit the "Monitoring System Certification Form" to the UPA within 30 days of completion of the test.

Violations

Violation Date: 05/02/2019 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Los Angeles County Department of Public Works
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Notes:

Returned to compliance on 05/27/2020. CTLS, OVFL, SCTR, AB2481 WERE RECEIVED LATE. OVFL TEST REJECTED MISSING TECH SIGNATURE. UDC 1/2/AND 5/6 FLOAT CHAIN ASSEMBLY.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Site History:

The project is being implemented on behalf of the City of Carson (City). The approximate 10.0 acre site (APN 7337-006-921 & 922) is used as Carson's City Hall and Community Center. Reportedly, there have not been any previous assessment activities conducted at the site.

The site is being assessed for environmental conditions to achieve a greater understanding of the issues that may be encountered during the renovation process. The purpose of the TSI is to provide specific information on potential environmental hazards that may need to be further investigated, addressed or cleaned up in order for the City to develop a mixed use project that houses a new and revitalized City Hall. Renovation plans may include retail and other commercial uses to contribute to the City's economic development efforts.

Public Partici Spclst:
Project Manager: DANIEL ZOGAIB
County: LOS ANGELES
Latitude: 33.8405555555556
Longitude: -118.257222222222
Acres: 16 ACRES
Supervisor: EMAD YEMUT
Cleanup Status: INACTIVE - NEEDS EVALUATION AS OF 8/3/2020
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: LANDFILL - DOMESTIC
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL
Site History:

No evidence of release to groundwater. The owner of the southern half of the landfill will not enter into a VCA. No OLC support for letter to have boundary subsurface landfill gas probes installed on adjacent properties to the north of the northern half of the landfill due to refusal of owners of adjacent properties to allow probe installation. Probes can't be installed onsite because the waste goes to the property line on the north side of the landfill. Without the probes, there is no way to know if there is any subsurface migration of landfill gas and COCs from the landfill and potentially under the buildings on the adjacent properties to the north. Therefore, the project is no longer active.

Potential Contamin of Concern:

CHROMIUM VI, LEAD

Status: INACTIVE - NEEDS EVALUATION
A2 Program Type: VOLUNTARY CLEANUP
CalEnviroScreen Score: 91-95%

Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District: LOS ANGELES UNIFIED SCHOOL DISTRICT
Past Use that Caused Contam: SCHOOL - ELEMENTARY
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR
Potential Contamin of Concern:

METHANE, TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE), UNDER INVESTIGATION

Site History:

The Site has been the existing Del Amo Elementary School since 1959. Prior to 1959, the Site was used for agricultural purposes. As illustrated in Figure 1, the Site is bounded by Water Street to the West, 213th Street to the South, residential homes to the East, and Rainbow Transport Tank Cleaners (Rainbow Facility) to the North and Northeast. To determine if contaminants have migrated onto the Site from the adjacent Rainbow facility, DTSC collected soil, soil gas and groundwater samples at the boundary of the Site. Elevated concentrations of Rainbow related contaminants were not found. Elevated levels of methane were detected, and LAUSD implemented 3 vapor extraction systems to remove elevated methane originating from a broken natural gas pipeline. Methane levels have been reduced non detect levels or negligible (very low) detections. Ongoing monitoring for VOCs will be conducted at the boundary between Del Amo and Rainbow during remedial activities associated with the adjacent Rainbow Trucking.

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 711
Waste Code Description: Liquids with cyanides > 1000 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: F008
Waste Code Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Handler Details

Sequence No: 8
Receive Date: 20040227
Handler Name: HUCK INTL INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Source Type: Annual/Biennial Report

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F007
Waste Code Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Hazardous Waste Code: F008
Waste Code Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Sequence No: 9
Receive Date: 20060227
Handler Name: HUCK INTERNATIONAL INC.
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 141

Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 711
Waste Code Description: Liquids with cyanides > 1000 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F008
Waste Code Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 711
Waste Code Description: Liquids with cyanides > 1000 mg/l

Hazardous Waste Code: 723
Waste Code Description: Liquids with chromium (VI) > 500 mg/l

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D010
Waste Code Description: SELENIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F007
Waste Code Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Hazardous Waste Code: F009
Waste Code Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Code: P106
Waste Code Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20200228
Handler Name: HUCK INTERNATIONAL INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 172

Waste Code Description:	Metal dust (see 121) and machining waste
Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	352
Waste Code Description:	Other organic solids

Site History:

In 2000, the facility had officially closed their two tanker units. These tanks were thoroughly cleaned and covered. The soil around the units were sampled/analyzed and were proven to have no heavy metals, volatile organic compounds, or petroleum hydrocarbons contaminants.

This facility is also known as Huck Manufacturing. This facility submitted a Part A application for one storage and two treatment units (wastewater treatment plant).

After submitting Part A and obtaining ISD, Huck determined that treatment units were exempt from Permitting requirements. On 6/20/88, EPA concurred treatment units were exempt from Permitting requirements. DHS did not exempt the treatment units but rather granted the treatment units a variance from permitting requirements on 6/20/90.

In 1992, DTSC implemented PBR program which regulated the toperation of the reatment units since 1993.

A remaining storage unit never received a Part B permit but went to closure and was verified closed on 6/3/95. The closure plan was public noticed twice due to the amendment.

A PA conducted by USEPA and multiple soil investigation conducted during 98-99.

Status: CLOSED
A2 Program Type: HAZ WASTE - RCRA

Site History:

This facility is also known as Huck Manufacturing. This facility submitted a Part A application for one storage and two treatment units (wastewater treatment plant).

After submitting Part A and obtaining ISD, Huck determined that treatment units were exempt from Permitting requirements. On 6/20/88, EPA concurred treatment units were exempt from Permitting requirements. DHS did not exempt the treatment units but rather granted the treatment units a variance from permitting requirements on 6/20/90.

In 1992, DTSC implemented PBR program which regulated the operation of the reatment units since 1993.

A remaining storage unit never received a Part B permit but went to closure and was verified closed on 6/3/95. The closure plan was public noticed twice due to the amendment.

A Corrective Action Concent Agreement for two(2) areas [Small spill behind the Drum Storage Area, and Area below the Bulk Oil Strorage Tanks (hydraulic oil)] was appealed by the Facility. DTSC agreed to facility-proposed sampling activities at the two areas to determine if corrective action was warranted. The results indicated that there was no contamination at the site. A No Further Action determination was approved by DTSC.

A PA conducted by USEPA and multiple soil investigation conducted during 98-99.

Status: NO FURTHER ACTION
A2 Program Type: CORRECTIVE ACTION

Site History:

In 2000, the facility had officially closed their two tanker units. These tanks were thoroughly cleaned and covered. The soil around the units were sampled/analyzed and were proven to have no heavy metals, volatile organic compounds, or petroleum hydrocarbons contaminants.

This facility is also known as Huck Manufacturing. This facility submitted a Part A application for one storage and two treatment units (wastewater treatment plant).

After submitting Part A and obtaining ISD, Huck determined that treatment units were exempt from Permitting requirements. On 6/20/88, EPA concurred treatment units were exempt from Permitting requirements. DHS did not exempt the treatment units but rather granted the treatment units a variance from permitting requirements on 6/20/90.

In 1992, DTSC implemented PBR program which regulated the toperation of the reatment units since 1993.

A remaining storage unit never received a Part B permit but went to closure and was verified closed on 6/3/95. The closure plan was public noticed twice due to the amendment.

A PA conducted by USEPA and multiple soil investigation conducted during 98-99.

Status: CLOSED
Program Type: HAZ WASTE - RCRA
CalEnviroScreen Score: 86-90%

Site History:

INTRODUCTION

Rainbow LLC (Rainbow) occupies a 10 acre parcel zoned for light industrial uses. The site is used for the following purposes; tanker truck cleaning under the name "Rainbow Transport Tank Cleaners", truck and trailer parking, containerization, vehicle staging and vehicle maintenance.

PERMITTING

Permitting - Historical
The tanker truck business has operated at the site since the 1960's, formerly under the name "Chemical Rainbow Tank Cleaners". Rainbow applied for RCRA Interim Status on November 18, 1980 and was granted RCRA Interim Status on December 23, 1981. Rainbow subsequently applied for and was granted Standardized Permit Interim Status on June 1, 1993. After receipt of Standardized Permit Interim Status, discussions occured between Rainbow and DTSC regarding the appropriate regulatory status of site operations. In a letter dated July 14, 1994, DTSC determined that the hazardous waste generated from cleaning of trucks that contained hazardous materials was generated on-site. Given that Rainbow had ceased cleaning trucks that contained hazardous waste, and only generated waste on-site, they were eligible for conversion to the tiered permitting program under the Permit-by-rule tier. In a letter dated May 26, 1995, DTSC authorized delayed "limited" closure of the facility until the facility closes or terminates use of the hazardous waste management units for on-site hazardous waste treatment under Permit-by-rule.

CORRECTIVE ACTION

For information regarding the on-going investigation and cleanup of the Rainbow site please refer to the separate EnviroStor page for corrective action.

Site History:

INTRODUCTION

Rainbow LLC (Rainbow) occupies a 10 acre parcel zoned for light industrial uses. The site is used for the following purposes; tanker truck cleaning under the name "Rainbow Transport Tank Cleaners", truck and trailer parking, containerization, vehicle staging and vehicle maintenance.

PERMITTING

Permitting - Historical
The tanker truck business has operated at the site since the 1960's, formerly under the name "Chemical Rainbow Tank Cleaners". In the 1980's Rainbow applied for and was granted Interim Status authority to act as a hazardous waste facility. Rainbow initially intended to apply for a Standardized Permit to treat waste water generated during cleaning of hazardous waste transportation vehicles. However, after considering all options Rainbow elected to limit operations to cleaning hazardous material transportation vehicles and applied for authorization under the Permit by Rule tier to operate a limited waste water treatment plant at the site.

Permitting - Current
Rainbow treats waste water generated during tanker truck cleaning under the authority of a Permit by Rule issued by the Los Angeles County Fire Department Hazardous Material Division, a CUPA agency to the Department of Toxic Substances Control (DTSC).

CORRECTIVE ACTION

Corrective Action – Phase I Environmental Assessment
In early 2004, an Environmental Assessment Preliminary Site Characterization (EAPSC) was prepared by Rainbow. The EAPSC identified a total of eleven (11) solid waste management units (SWMU) and two (2) areas of concern (AOCs) at the site as follows:

SWMU # 1 – Northern Waste and Chemical Storage Area
SWMU # 2 – Former UST K and Containment Area
SWMU # 3 – Current Wash Rack
SWMU # 4 – Former Waste Oil UST Q

SWMU # 5 – Organic Waste Water Treatment Area
SWMU # 6 – Waste and Auto Repair/Storage Area
SWMU # 7 – Former Fuel UST R Area
SWMU # 8 – Former (Old) Wash Rack
SWMU # 9 – Pump Station Sumps
SWMU # 10 – Former Truck Maintenance/Repair Facility
SWMU # 11 – Tank K Over Excavation Stockpile Berm

AOC # 1 – Tank Truck Staging Area (NW Corner of Site)
AOC # 2 – Former Agricultural Roadways Used by Farmer

Corrective Action - Investigation
On December 28, 2004, DTSC and Rainbow entered into a Corrective Action Consent Agreement (Consent Agreement) [Docket HWCA: P1-04/05-005] for the investigation of SWMUs and AOCs at the Site. Based on a review of existing site characterization data, DTSC concluded that additional investigation was warranted at SWMUs 2, 3, 8, 10 & 11, and AOC 2.

Rainbow has implemented several work plans at the site since the Consent Agreement was signed in a bid to fully characterize the site. In 2005, Rainbow began planning an accelerated investigation and cleanup program to possibly allow for future residential development at the site. DTSC is not currently aware of any plans to redevelop the site for residential use.

On September 28, 2009, DTSC approved an Interim Measures Work Plan for a small soil vapor extraction (SVE) system in the north west corner of the site. The SVE system operated from October 2009 to October 2010 and a rebound study was performed.

DTSC approved the RCRA Facility Investigation (RFI) report on May 12, 2010. The RFI report supports the need for a Corrective Measures Study (CMS) at all SWMUs and AOCs but SWMUs # 4, 7, 8 and 11. Rainbow prepared an RFI Summary Fact Sheet that was mailed to the community in June 2010.

On January 11, 2011, DTSC approved the CMS work plan. The CMS work plan outlines the remedies that will be evaluated for the site. The CMS work plan included a proposal to evaluate Ozone Sparing as a groundwater cleanup technology using a pilot study. The Ozone Sparging pilot study was completed at the Old Wash Rack in late 2012. A full scale Ozone Sparging proposal for the Old Wash Rack was prepared dated July 26, 2013. The Ozone Sparging work plan was released for public comment from August 14, 2013 to September 13, 2013. DTSC approved the Ozone Sparging work plan on October 14, 2013.

The soil vapor rebound study completed in the north west corner of the site found that contamination remains and it was decided that the SVE system should be restarted. Rainbow applied for and obtained a permit to operate the SVE system from the South Coast Air Quality Management District. The SVE system was restarted on August 26, 2013.

Construction of the Ozone Sparging system at the Old Wash Rack was completed in February 2014 and startup occurred on March 12, 2014.

On July 10, 2015, DTSC conditionally approved a work plan for soil vapor sampling at Del Amo Elementary School. The work plan was implemented shortly thereafter.

The SVE system in the north west corner of the site was shut down in January 2015 and Rainbow is performing rebound monitoring.

The Ozone Sparging system at the Old Wash Rack continues to operate. The SVE system at the north west corner of the site is currently off and Rainbow is performing rebound monitoring. In addition, Rainbow continues to perform semi-annual groundwater monitoring. The final CMS Report for the site excluding the Old Wash Rack was submitted dated December 23, 2015, and was deemed technically complete by DTSC on April 5, 2016

Corrective Action - Current Status
Rainbow is currently negotiating with the owner of the property located at 21111 Wilmington Ave regarding cleanup of contamination that has crossed the site bounds. Once the negotiations are complete, an addendum to the CMS Report addressing the Old Wash Rack will be prepared.

Corrective Action – Planned Activities
Public notice of the remedy for the entire site is expected in the second half of 2016.
